He has had a wonderful poultry career and established a record of winnings that causes him to be pointed out in all show rooms. His winnings would fill a good-sized book, and in reading it you would find first prize very often.

To be on the job at the Chicago Coliseum he and his Royal Blue Barred Rocks traveled over a thousand miles, and when the awards were given he walked away with what we think is the greatest record ever made with that variety in Chicago. In this class there were 254 birds competing and Mr. Hawkins won Grand Special for best display, 1st and 5th cock, 1st and 3rd cockerel, 1st pullet, 1st and 2nd pullet-bred cock, 1st and 3rd pullet-bred cockerel, 1st cockerel-bred pen, 2nd pullet-bred pen, special champion male, special champion female, shape male and female, color male and female—in fact, every special offered. It was a very high-class record, won by a high-class man and real high-class birds.

This record beat his Chicago record of a year ago, when he won four first prizes and the sweepstakes championship hundred-dollar cup for best display. It would

J. J. Campbell, Hartford, Conn. General Sales Agent

take page after page to publish a full list of all his winnings, but suffice to call your attention to his record of a year ago at Madison Square Garden, when he won six of the eight prizes on Barred Rock cockerels, including first prize and sweepstakes special for best cockerel in the show, also special prize for best cockerel mated pen.

As we stated before, there are very few of the old school left, and we wish you much luck, Mr. Hawkins, and hope you continue to win prizes for many years to come.

Mr. Hawkins has just published a beautiful illustrated catalogue; it tells all about his Royal Blue Barred Rocks, giving his mating list and prizes. It is free. Address A. C. Hawkins, Lock Box 25, Lancaster, Mass.—H. P. Schwab.

Best in the World.

Rather a strong statement, yet we think it has been proven in the case of Haldie Nicholson's Blue Orpingtons. Without a shadow of a doubt his record this year is a wonderful one; it stands without a peer and sets a standard that we doubt will ever be equaled. His Chicago Coliseum record was a wonder, but he wasn't satisfied; he went on to the Garden; another big winning there; to Boston, and turned the trick again. This record of winning blue ribbons at the three great shows of the country places his birds not only the leading Blue Orpingtons of America, but the entire world. Just read this list of winnings; then you will see why they are called the best in the world: Madison Square Garden—Won 1st hen, 1st and 5th pullet, 2nd and 5th cock, 2nd cockerel, 2nd and 3rd pen and best display; there were 109 in competition. At Boston he won 1st, 2nd and 3rd cock, 1st and 2nd cockerel, 1st and 5th pullet, 4th and 6th hen and best display; 52 in competition. At Chicago Coliseum he won 1st cock, 1st cockerel, 1st pullet, 1st hen and best display. This record, following the one of a year ago, when he took four first prizes at Madison Square Garden, is one to be very proud of. Along with this great Blue Orpington record is the winnings of his Barred Rocks. At Boston, in one of the hottest classes ever shown, he took 1st, 2nd and 6th cock; at the Crystal Palace Show, London, England, American class, he took 1st and 2nd cock, 1st and 2nd cockerel, 1st, 2nd and 3rd hen, 2nd pullet and international medal. This is just a few of his many ribbons, nor does it include the many winnings of his customers, showing in smaller shows. Now, if you are in the market for Blue Orpington or Barred Rock stock or eggs, be sure to write for his prices. Address Haldie Nicholson, Box 4, Leominster, Mass.

Oculum.

The following letter from a man in our home town shows what people who have used "Oculum" think of it. "The Hancock Inoculatum Company, Salem, Va. Gentlemen:—Accept this testimony from an Oculum user for years in your home town. It is a marvelous remedy as a tonic. The fine, plump, juicy broilers and pure, germless eggs it produces is 'too good to be believed.' I lost 4200 chicks from white diarrhœa and 300 hens from cholera before I got on to Oculum. The following year I hatched 2500, and lost less than five per cent. No more mouth remedies for me, for disease paralyzes the crop and they can't get to the disease; but Oculum is injected and gets there every time. The 'man from Missouri' will soon get the Oculum idea through his noodle, then look out for business. Yours truly, Speedwell Poultry Farm." You will find the Oculum advertisement in this issue; it is very highly endorsed.

Going Some.

Rather a slangy expression that, but it sure tells the story of the Foxhurst Farm at the recent New York Madison Square Garden Show. Showing their Single Comb Champion Black Orpingtons, they won a list of prizes that made everyone sit up and take notice and which will go a long way towards making the history of Lime Rock, Conn., the town where the Foxhurst Farm is located.

In pullets they made a clean sweep, taking 1st, 2nd, 3rd, 4th and 5th; in cockerels they took all but one, winning 1st, 3rd, 4th and 5th; hens, they took 1st, 2nd and 3rd, and also 1st, 2nd and 4th cocks, making a record of every first prize in S. C. Black Orpingtons, with the exception of pen. This record stands out

WILSON BROS., Dept. C. C., Easton, Pa.

all the more when you take into consideration that the Foxhurst birds have been the largest New York Garden winners for six years, a record that stands alone. This farm makes it a business to win at New York, then mate their pens with these winners, so as to give their customers real ribbon winners; therefore if you are in the market for stock from a consistent winning and line bred strain, don't overlook the Foxhurst Farm. Just drop them a postal to Box A, Lime Rock, Conn., and they will send you their handsome new catalog.

Danville Show.

The 20th annual exhibit of the Vermilion County Poultry Association, held at Danville, Ill., was the most successful in the history of the association. The classes were well filled and many birds of good quality entered.

The leading classes were Barred Rocks, Rhode Island Reds, Buff Orpingtons. Black Langshans, Black Orpingtons and White Faced Black Spanish.

The weather was delightful, allowing the public to attend regularly, and as a result the receipts far exceeded the expense, the show closing with a nice little reserve fund for next season.

During the progress of the show the association held its annual meeting, electing a full set of officers for the coming year; each one elected is a booster and a power in himself, pledging to make the 1915 exhibit greater and better than the one just closed.—J. C. Johnston.

Sunlight Poultry Farm.

Sunlight Poultry Farm, with E. N. Lemon as proprietor, is situated near Lynchburg, Ohio, and breeds S. C. White Leghorns exclusively (D. W. Young strain), and is one of the most up-to-date farms in Ohio. With its clean, well ventilated houses, its grassy fields, over which his birds are at liberty to roam at will and last, but not least, his beautiful snow-white flock of the S. C. W. Leghorns, surely make a pleasing picture. His breeders are on unlimited range the entire year, which is the only way to obtain the best of fertility in hatching eggs and good, strong, healthy, livable chicks. The chicks are all hatched in Mammoth Incubators, and grow and thrive from the start and develop into vigorous birds. Raising show birds is not the object on this farm, but Mr. Lemon is trying to build up a strain of layers which cannot be surpassed, and he surely has succeeded. Although the sire of all the male birds on the farm this year was first prize cockerel at the Cincinnati show in January, 1913, and their grandsire was Edward XLIV, owned by D. W. Young and the best male bird ever shown.

His prices are within reach of everyone, while his birds are eligible to enter the show-room if you wish them for that purpose. His catalogue is free and he will be pleased to mail it to anyone for the asking. Adv. appears on another page of this magazine. Mr. Lemon pays all expressage on eggs and chicks, which means a great saving to his customers. Address Sunlight Poultry Farm, Lynchburg, Ohio.

Give Report from "Actual Users"

The attention of our readers is called to the advertisement of the Cyphers Incubator Company, page 193 of this issue, which gives interesting reports from owners of the Indoor Sectional Paradise Brooders manufactured by this company. Following is another sample report, which is published at the request of the Cyphers Company:

"Hope, Ind., March 4, 1913.
Cyphers Incubator Co., Buffalo, N. Y.
We are having splendid success with our paradise brooder purchased of you—the one you sent us by express. It is being operated in a room 12x14 feet, with fairly good light. We aim to keep the chicks in the brooder from eight to twelve days, placing fifty chicks in each section. As we have three sections of the Paradise it gives us a capacity of three hundred chicks at one time. We do not hesitate to put of different ages in the several sections of the brooder and results have been very satisfactory. This is our second season with the Paradise and it continues to do splendid work. Must say that it is the best brooder we ever used as a 'chick nursery.' It would be hard for us to give up this brooder. J. C. Fishel & Son."

The reader is requested to look up the Cyphers Company's full-page advertisement of this brooding device on page 193 of this issue.

Made in 5 sizes and Sold As Low As $10.00

Eastern Breeders' Notes.

BY H. P. SCHWAB.

Mr. Porter Elosser, Cumberland, Md., won all honors at Washington and nearly all at Baltimore with his Black Langshans. His first hen was the beauty of the Wasnington Show, a wonder in type. His mating list is ready. Get one.

The "Maryland Strain" of Barred Plymouth Rocks, bred by Mr. R. J. Walden, Middleburg, Md., won more honors at Baltimore. The feature of the show was Mr. Walden's display pen of the five hens that won highest honors two years at the Storrs Egg-Laying contests. This year Mr. Walden has won at Williamsport, Hagerstown, Philadelphia, Baltimore, etc.

C. A. Keefer, "Edgemere Farm," Muskegon, Mich., again made a clean sweep on Orpingtons (Buff and White) and Silver Campines at the show which just closed in that city (over 1100 birds exhibited). His winnings were as follows: Buff Orpingtons—Cocks, 1-2-3; cockerels, 1-2-3; hens, 1-2-3-4; pullets, 1-2-3-4; first and second pens; silver trophy, best pen Buffs. White Orpingtons—Cocks, 1-2-3; cockerels, 1-2; hens, 1-2-3-4; pullets, 1-2-3-4; pens, 1-2. Silver Campines—Cocks, 1-2; cockerels, 1-2-3; hens, 1-2-3-4; pullets, 1-2-4; pens, 1-2; association's $50 sweepstakes trophy for best display of birds. Several well-known judges visiting the show pronounced his Campines something remarkable and the first prize cockerel by far the best they had ever seen, while the Orpingtons were of the usual high class exhibited by Mr. Keefer.

Dune Alpin Leghorns have a character all their own. Their winnings for years have improved. This year at Hagerstown and Palace, New York, they have won about all in sight. Manager Geo. J. Kerr not only knows how to breed, but is a wonder in conditioning. His success is due.

Zion City White Orpingtons.

Up at Zion City, Ill., there is one of the best small poultry farms to be found in the country. The owner, Mrs. John Harnly, specializes in White Orpingtons and has been a consistent prize winner wherever she exhibits, including such shows as Chicago Coliseum, Springfield State Show, Milwaukee and Indianapolis.

When she started in the chicken industry she scoured the country so as to get the very best, and a great amonnt of her success came through making her foundation so strong. She has continued to build until today she is shipping winning birds to customers all over the country.

You will find that Mrs. Harnly's prices are very reasonable and her birds and eggs of the best quality. Be sure to write her for prices. Address Mrs. John Harnly, 2301 Elisha Ave., Zion City, Ill.

Licene Kills Lice and "Nits."

When other lice killers fail, try Licene. It does the work every time. Send to the Licene Co., 1500 Pontiac Building, Chicago, Ill., for a tube of Licene, price 50 cents, and they will send you enough Licene for 200 birds. This firm will refund your money if you are not satisfied.

Hon. W. W. Graves, justice of the Supreme Court of the State of Missouri, says: "Jefferson City, Mo., Dec. 28, 1913—I think Licene is the stuff. Of course we are not troubled so much with lice and nits this

—o—

Brooders.

The Duplex Colony Brooder means a new day dawned for the poultryman. It is going to make it just as easy to raise chicks as it is to hatch fertile eggs. It will turn out just as large a per cent of natural fowls as incubators will chicks from fertile eggs. This may sound like a strong assertion, but if you will read the little booklet called Duplex System of Colony Brooding you will be convinced that it is a wonderful machine. There was never a chick raised by Duplex Colony Brooding System that had white diarrhœa, because the ventilation system is part of the stove and the poison is carried away as fast as it forms. This insures the chicks against the most deadly of poultry diseases

These Duplex Brooder Stoves come in three sizes and are equipped to burn gas or cheap oil. They have the automatic regulator which maintains the desired temperature in your brooder house automatically, regardless of temperature outside.

All in all it is a wonderful machine and should raise enough more chicks out of the first lot to pay for its installation.

You want the best results, so write for their catalog. Address Duplex Colony Brooder, Catalog Dept., Rockford, Ill.

—o—

Where to Buy Day-old Chicks.

Many readers are perplexed right at this time as to where it is most advisable to place their orders for day-old chicks or eggs for hatching. Of course you want chickens at as low a price as you can buy them, still you do not want to sacrifice price for quality.

One of the first considerations is to purchase from a firm who you know takes particular pains to keep its breeding stock up to top notch; one that not only has the best blood lines obtainable, but also keeps them up in a good strong, healthy condition. The second consideration, perhaps the most important, is to be assured that your chicks are well hatched. Ninety per cent of the chicks that die each season can be traced directly to improper incubation. It has been proven that chicks will hatch under all kinds of conditions and varying temperatures, and yet if the proper amount of ventilation, the proper amount of moisture applied at the critical period, the correct temperature at all stages, the correct cooling and airing of the eggs, are not all taken care of properly, chicks may result but they are far from well hatched.

The Goshen Poultry Farms have from the start given this subject their utmost attention. Their man in charge of the hatching department has made a life study of artificial incubation and today their chicks have a reputation that reaches from coast to coast for vitality, hardiness and livability. You want every chick you purchase to be a living monument to your success. If you are interested further, write for their catalog. Address Goshen Poultry Farms, Route 7, Goshen, Indiana.

The Regal Egg Carrier is what you want.

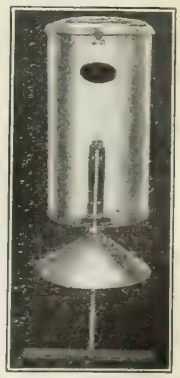
Successful Poultry Hoppers



are more than mere receptacles for grain. The efficiency of a dry mash hopper depends upon its ability to maintain a uniform supply of mash under all sorts of conditions without waste. The efficiency of an automatic feeder lies in its ability to meet the requirements of every bird, regardless of age. It is a comparatively simple matter to make a mash hopper of iron or wood and a little wire; it is equally simple to combine a pail and a rod and a few fixings and call it an automatic feeder; but to prevent clogging and waste in a dry mash hopper under all conditions, to feed any desired amount and maintain regular agitation in an automatic feeder is a feat that only the highest type of mechanical ability, combined with years of practical poultry experience have been able to accomplish. If t had been an easy feat, the

DRY MASH HOPPER

Gillette
Poultry Hoppers

would have been given to the public five years ago. The superior efficiency of the Gillette Hoppers has been completely and emphatically demonstrated, and it is a significant fact that the most profitable flocks of poultry in the world are fed by the Gillette Hoppers.

AUTOMATIC FEEDER

Whether you keep 10 chickens or 10,000, you surely will want to investigate by an actual trial order our 12-qt. Dry Mash Hopper at $1.00, or our 16-qt. Automatic Hopper at $2.50, or both.

Delivered anywhere east of the Mississippi. These hoppers are the same in every detail as the hoppers used by so many successful poultrymen everywhere. We guarantee satisfaction or refund your money. Printed matter for the asking. Mention A.P.J.

Fred W. Morse Co., Providence, R. I.

Hard Luck

Shipping their birds from Greensburg, Indiana, on Saturday night and not arriving in Boston until Tuesday morning, and then reaching their destination in a temperature of five below zero, only to be on the floor a couple of hours before judging, was the experience of C. J. Loyd & Son. It was surely hard luck, for sixty hours on a railroad does not help birds in the least.

With all of this they captured 2nd, 4th, 5th and 6th pullet, 3rd, 4th and 6th cock, 6th hen and 3rd pen—a very good record when you consider the circumstances. At Columbus they won 2nd, 3rd and 4th cock, 2nd, 3rd and 4th hen, 1st, 3rd and 4th cockerel, 1st, 3rd and 4th pullet, 1st, 2nd, 3rd and 4th pen, cup for best Plymouth Rock display and cup for best and largest display in show. Loyd & Son together with their prize winning Partridge Rocks are known wherever they show birds.

Welcome, Mr. Wideman.

The Mound Hill Farm of Seville, Ohio, has a new member in their firm, Mr. J. C. Wideman, the well-known owner of a large string of Tom Barron stock, the history of which most readers are familiar with. The firm will remain under the same name with S. D. Hall as manager. With the added stock and increased facilities, including a Hall Mammoth incubator which they recently installed, they are in a position to handle your baby chick wants better than ever. A good firm and two mighty fine men to do business with, let them quote you prices. Address Mound Hill Farm, Seville, Ohio.

How to Raise Chicks.

On another page of this issue you will find the advertisement of Dr. J. J. Boone of Mt. Victory, Ohio. He is making a

specialty of day-old-chicks and goes a little further than some breeders by agreeing to furnish complete instructions on how to raise 95 per cent of all birds you buy from him. He also states satisfaction guaranteed. Write for his prices as he is booking a great many orders every day. Address Dr. J. J. Boone, Mt. Victory, Ohio.

———o———

All eyes on "Dr." Whiting at the Philadelphia and New York Poultry Shows and as usual he made good. When in distress the poultrymen invariably seek out the "doctor" at the shows; they don't want to risk the loss of a bird, as well as a ribbon, and as good news travels fast, so has Whiting's fame. With Roupene the "doctor" never fails to turn the trick, and many the bird at death's door does he rescue from an early grave, or the hatchet. Mr. Walter C. Young takes off his hat to Mr. Whiting, and well he might—with a blue ribbon winner at stake. See what Roupene did for his best bird: "During the Philadelphia Poultry Show one of our R. I. Red Cockerels contracted a severe cold, which closed both eyes and nearly closed the windpipes. Thursday A. M. he was barely alive. Mr. Whiting treated him with his Roupene, and Saturday he was on the way to the New York Show in fine condition. At Philadelphia this cockerel won blue ribbon and cup for best bird in the Show, and is a ribbon winner at Madison Square Show. If Roupene will do things like this for me in the open show room, then what could it not do at home. I never saw anything that could do the work so quickly and thoroughly as does this remedy. Very truly yours, Schenley Heights Poultry Farm, (Signed) Walter C. Young, Manager."

Ask the O. K. Company of New York, distributers of Whiting's Remedies, for free printed matter, and if you are skeptical I have known them to send out even a full sized bottle, without the cash in advance. Remember, there is a guarantee with every bottle.

———

Mr. J. A. Bickerdike, formerly of Millersville, Illinois, has located in the Rogue River Valley at Medford, Oregon, where he is still interested in White Rock fowls. Mr. Bickerdike has won many prizes both locally and at big shows with his stock. Recently he has been interesting himself in a new book of pedigree poultry which he has ready for sale. This book has been compiled from years of experience with poultry and his success in this has been credited to the fact that he has trap-nested for years and has now become authority in these matters. What he has written on this subject is interesting reading to those who raise poultry for either show or utility purposes.

Adair of Millersburg.

J. T. Adair of Millersburg, Ky., has a fine a lot of S. C. Black Orpingtons as yo will find and they always get their shar of blue ribbons. The type is grand and th color wonderful—green, glossy black, with out a trace of purple or any other foreig color. His Cincinnati winnings were firs old and first young pen, first and fifth hen third cockerel, fourth pen and best displa for Black Orpingtons. His matings ar made up of these and many other winners Write for list and catalog.—H. H. Coburn

———o———

Parsons at Toledo.

The Parsons S. C. White Orpingtons showing at Toledo January show took three firsts, two seconds, one third, two fifths and three silver cups. The cups were best cockerel, best pullet and best display. It was a large and strong class, with many exhibitors. Their mating list for the year is now ready; write for it. Address Parson's Poultry Plant, Avon Lake, Ohio.—H. H. Coburn.

TRAPNESTING

There is an enormous profit in poultry breeding. The time has past when Chickens are raised and barely given the existence food for preservation of life. They are fed now scientifically and with a view of getting the best out of the investment. Men have been paying strict attention to this for years with wonderful statements of results. One hen had the world's record for egg laying. Lady Show You laid 281 eggs in one year and being of good breed, fed properly, she was able to bring her owner the nice sum of $800.00.

She was a trapnest hen and her owner, J. A. Bickerdike was satisfied with the experiment.

Link Your Profits Together

HENS

Cull out the drones and worthless fowls from your stock. Be able to know where your profits lie in your poultry yards. Trapnesting is the surest way of doing this. Both the quality of the fowls and the record of eggs are necessary to accomplish the best results in poultry raising.

USE THE BICKERDIKE TRAP NEST

and get results.

J. A. Bickerdike produced the famous Lady Show You hen that sold for $800.00.

You can do as well by using the Trapnest to cull out worthless stock and improve what you desire to keep.

EGGS

You should know how to feed for vigor and get the best results from your hens during the time of year when eggs are high and hard to get. J. A. Bickerdike has prepared a new book on this subject, and many others that all poultry raisers should take advantage of reading and know where they have failed to make the biggest profit out of their poultry.

This book is the result of years of careful study and experiments in poultry raising.

PEDIGREE POULTRY RAISING

fischer birds, which have won so many ribbons in past years. This firm uses good, honest treatment in all of their dealings, and by these means they have built up a very large business. They devote their time and attention to breeding White Orpingtons exclusively.

—o—

The Cleveland Poultry Breeders' Association Show.

From January 5th to 10th the Cleveland Poultry Breeders' Association held their second annual show at Grays Armory, Cleveland, Ohio. A year ago I prophesied a great future for this association and this came to pass, as was shown by the large attendance and the twenty-two hundred entries. There were about a hundred silver cups and many special ribbons donated by members and fanciers' clubs—the cups ranging in price from ten to fifty dollars. The officers of this association are J. O. Somers, president; Dr. R. H. Lunkle, first vice-president; G. W. Cunningham, second vice-president; J. B. Holmden, treasurer; I. H. Busch, superintendent; A. E. Rehburg, secretary; these and Dr. R. Lindhorst and D. H. Hopkins make up the executive committee. The directors are C. Ackerman, R. Brooker, C. Kriews, G. Poulson, C. Rehburg, F. Stien, A. Swoboda, A. Thompson, O. Wojahn, W. G. White and C. Zeck. I have never had the pleasure of meeting a finer bunch of gentlemen in all my life. Everything was carried on in first-class shape, ribbons and premiums being paid promptly. The association has a firm financial foundation and they have one of the best shows in the country. Some of our advertisers who were successful were R. D. Owen of Creston, Ohio, his S. C. Wyandottes won 2nd and 3rd hen, 1st and 3rd pullet and 1st pen; Carvers Red Farm with R. C. Reds, won 1st pullet, 3rd hen and 3rd pen; M. C. Deloof of Willoughby, Ohio, 3rd cockerel, 4th hen and 3rd cock; H. H. Holmes of Ashtabula, Ohio, 5th cockerel; W. F. Zimmerman of Willoughby, Ohio, 1st cock, 2nd and 3rd pullet and 5th hen. With S. C. Reds, B. M. Billings won 2nd cock; Carver's Red Farm, Seville, Ohio, 2nd and 3rd cockerel, 5th pullet and 3rd pen; Belle Vista Farm, Mrs. J. Warren, Mentor, Ohio, 3rd cock. With S. C. Buff Orpingtons, Wm. Cook & Son won 1st cock, 3rd hen, 1st and 2nd cockerel and 1st pen; Roseland Poultry Farm, South Euclid, Ohio, 5th cockerel, 4th cock, 2nd pullet, 5th hen and 4th pen. With S. C. White Orpingtons, Wm. Cook & Son won 1st cock, 1st hen, 2nd cockerel and 1st pen; R. H. Lindhorst, Cleveland, 3rd cock, 4th hen, 1st cockerel, 1st, 2nd and 4th pullet and 2nd pen. With S. C. Success With Poultry

To be successful you must know your fowls—know what to do when they are sick—how to prevent it occurring again—know just what to feed them—how to care for young chicks so as to raise them into strong vigorous chickens—the right and wrong kind of a poultry house—just when to set your hens—all about incubators and brooders—all about eggs. In fact these are just a few of the many things you must Know and which will be found in

999 QUESTIONS and ANSWERS

It covers all classes of poultry and answers questions not only for the fancier but also for the market poultryman. Theories and undemonstrated deductions are eliminated—it gives the positive conclusions arrived at by the experience of acknowledged authorities and the world's most successful breeders. It is presented in the form of questions and answers to respond to a universal demand for knowledge in a few words and right to the point. No matter what you want to know, the question and answer will be found in this 130 page book.

ROSE'S ORPINGTONS

BUFFS AND BLACKS

Hardy Canadian-Bred Birds

During the 1913-14 show season at America's two leading shows, **MADISON SQUARE GARDEN and CHICAGO COLISEUM** in the best classes of breed and in competition with nearly every prominent breeder. **MY BUFF ORPINGTONS won more first prizes than all competitors combined.** Consider the following winnings and **decide for yourself who has the best BUFF ORPINGTONS.**

At Madison Square Garden, Dec. 26-31, 1913
5 Cock, 3 Hen, 1-5 Cockerel, 1-4 Pullet, 1 Pen.

At Chicago Coliseum, Dec. 12-17, 1913
1-2-5 Cock, 3 Hen, 1-5 Cockerel, 1-2 Pullet, 3 Old Pen, 3 Young Pen.

My Black Orpingtons are Champions

At Boston, Mass., Jan. 7-11, 1913

My Black Orpingtons won 1, 2 Cock, 1, 4, 5 Cockerel, 1, 2 Hen, 1, 2, 3 Pullet, 1 Old Pen, 1 Young Pen, Championship Best Display.

My 1913 Record on Black Orpingtons

27 firsts out of a possible 33 firsts within the year 1913 at six shows of national reputation, viz: Boston, Allentown, Hagerstown, N. Y. State Fair, Toronto and Chicago, also Championship Best Display—five times out of six.

Neither in England, the home of the Orpington, or in America, can you obtain such quality and value in Buff or Black Orpingtons as I offer. **Rose's Orpingtons, Buffs and Blacks,** are bred to win in the strongest competition, **"Like Begets Like."** If your birds lack type, color and bone, introduce my stock.

Bred in the Vigorous Canadian Climate

They are hardy, rapid growers and splendid winter layers, characteristics you need to make your Orpingtons suit you to a "T". I can furnish a number of high class breeding males, also pairs, trios and breeding pens that will be carefully mated to produce the best results at "live and let live" prices. Send your wants and let me furnish description and quote prices.

EGGS EGGS EGGS

Eggs from the grandest collection of matings that I have ever owned. Every pen headed by a prize winner of a near relation. Better values do not exist anywhere. **Send for handsome new catalogue and mating list,** containing full page color plate showing my **first prize Buff Orpington Cockerel** at Madison Square Garden, Dec. 1913, **in natural colors.** It is free for the asking.

INCREASE YOUR EGG YIELD

I have imported direct from Tom Barron of Catforth, Eng., a pen of S. C. White Leghorn Pullets mated to a Tom Barron Imported English Cockerel from a 260 egg hen. They are from the same stock as his famous 282 egg pullet which record was made in America in the International Laying Contest. No better breeding stock can be procured. Settings from this pen will produce blood lines that will **breed layers. Prices — $8.00 for 15 eggs. $15.00 for 30 eggs.** My 1914 importation of Tom Barron English Birds include a number of S. C. White Leghorn Cockerels. I have mated them with my best pedigreed laying birds. Hatching eggs from these matings, $3.00 for 15 eggs—$7.50 for 50—$13.00 for 100. **Rose Comb White Leghorns**—These birds are raised on my own plant and bred for high egg production. They are mated to strong, vigorous, extra white, egg type cockerels. **Prices**—$2.00 for 15 eggs—$3.50 for 50—$6.00 for 100—$50.00 for 1,000. Rose Comb day old chicks from these pens, $7.00 for 50—$12.50 for 100. Safe arrival guaranteed. **Full Blood White Wyandottes**—Write for prices on hatching eggs and day old chicks. **Free illustrated catalog**, containing prices and matings of high pedigreed breeding birds sent upon request. Write today.

LYLE W. FUNK Box 38 Bloomington, Ill.

Phosto
(REGISTERED)

A Scientific Preparation of Phosphates. The 20th Century Product.

Have you ever stopped to think why you lack fertility, why your chicks die in shell, why your chicks drop off before they really get a start in life? It is the natural lack of Ash, and **Phosto** has demonstrated this. You may break your head over Protein and Carbohydrates, but you will always end just where you started.

Phosto, the greatest invention since the incubator, solves the feeding problem and does it well. Start now at the root of the evil, in the breeding pen, and follow up on the chicks, and for once you will know what it means to get maximum results.

Capt. Max de Bathe, the clever little Englishman who judged at Madison Square a year ago, says this:

I am a great believer in **Phosto.** It accounted for the wonderful condition all my birds were shown in last season. I use a lot of **Phosto** and have found it does my birds great good.

Phosto is endorsed by W. J. Golding, Harold Corrie, Frederick Chatterton, Miss Carey, Will Hooley (The London World's expert) and hundreds of England's leading authorities. Wherever you find bone and size you can depend upon **Phosto** being responsible.

Order in $1 and $2 tins prepaid, for **Poultry.** Literature free.

THE PHOSTO COMPANY
Norwood Park Chicago

ILLINOIS STATE POULTRY SHOW.

By J. C. Johnston.

The Illinois State Poultry Show, which closed January 10, 1914, will go down in history as one of the most successful exhibits ever held in the state. Thirteen states and Canada were represented in the entries, all bringing quality to be admired in any show room; the weather man was more lenient in his schedule as compared with former years, and the effect was very noticeable on the attendance, which far exceeded that of previous years. A very enthusiastic meeting of the State Association was held Thursday afternoon at 4 o'clock, at which there was much agitation in favor of moving the show to Quincy or Peoria in 1915. A representative of the Springfield Business Men's Association responded to their sentiment, stating that Springfield had been negligent in its appreciation of the state show, but that if they were given another chance they would redeem themselves. Plans were discussed at length for the 1915 show, more enthusiasm being manifest in the discussions than has ever been displayed in any previous meetings. Prospects never looked brighter or better for the Illinois State Poultry Association than they do at the present time, and with favorable conditions the 1915 exhibit will far exceed any that have gone before.

Some of the classes showed a decided increase in numbers and quality over former years, those most noticeable in this respect being Barred Rocks, Buff Orpingtons and Black Minorcas. There was a noticeable falling off in some of the classes. However, this was counterbalanced by the increase in others, so that the exhibit as a whole was up to or above standard.

Barred Plymouth Rocks.

First cock was well finished, good in head and comb, strong in wing and tail, showing clean, snappy barring in all sections, losing in under color of back. Second cock showed a good head and comb, fiery red eye, snappy, clean color throughout, good in undercolor, losing on condition and in shape of wings. Third, even color; clean, strong; bad head and comb; very narrow; snappy color in saddle and breast, losing slightly in under color of back.

First cockerel, good type; fine rock back and tail; great length and depth of body, with good breast, showing plenty of keel; even, clean, snappy color in all sections, with very narrow hackle and extra good in tail; won shape, color and champion male. Second, well balanced in type; good back and body, strong underline, extra quality of barring underneath, but losing slightly in wing, tail and hackle. Third, a comer; not quite finished, but showing fine type; good head and comb, clean barring in all sections, with strong undercolor. Fourth, a grand good bird; lost on shape of wings; clean color all through. Fifth, good strong color, clean and snappy; lost on type.

First hen, grand barring; clean yellow leg and beak; a little short in plumage; clean cut, with good wing and tail. Second, well finished; clear, snappy barring in all sections, losing in type to first. Third, large type, coarser in barring; feathers well tipped. Fourth, almost a counterpart of third. Fifth, clean-cut, narrow barring all through, with strong under color; lost on size and broken flights.

First pullet, simply grand in type; perfect back, tail and body; color clean-cut, snappy, "down-to-date," with no tendency to metallic shade or brownish tinge; good head and eye; one of the best if not the best pullet ever shown in Illinois; winner of shape, color and champion female. Second, well balanced type; clean, narrow barring in all sections; good hackle and wing; losing slightly in breast and tail color. Third, a trifle more open in barring than first and second, and losing slightly in type and finish. Fourth, beautiful barring; full sister to first, showing great promise; lost on maturity. Fifth, well balanced type; good undercolor, losing on surface barring.

Pullet Bred.—First cock, clean-cut color; a trifle heavy in black bar; bars running straight and even in all sections; good eye; fine yellow leg and beak. Second, not so clean in barring as first; even color in all sections, losing slightly in tail color and back. Third, a good even color; bad comb; would have gone higher if in condition. Fourth, good type, fine rock back and body; strong in head points, with good beak and legs; open in barring in all sections.

Cockerels.—First, beautiful type; well balanced; clean, snappy color; grand head and eye; barring clean-cut and regular in all sections. Second, third and fourth following closely in the order named, fifth losing on quality of barring and condition.

Cockerel Bred.—First hen, a wonder in

NEW YEAR'S BELLS IN NEW YORK

Chimed forth the glad tidings to all the world of

DUSTON'S
FAMOUS WINNINGS IN
White Wyandottes

You don't have to tell any breeder what competition means at Madison Square Garden, many have tried it to their sorrow. Every prospective buyer knows what it means to walk into the Garden and carry away the Blues in the young classes, as I did; winning 1st Ckl., 1st, 3d and 4th Pullets; 4th and 5th Hen, and 5th pen. Silver Cup for best two Cks., two Hens, two Ckls., two Pullets, two Pens.

SPECIAL
For Best Wyandotte In the Garden

Male or female, all varieties competing. This was awarded my 1st Pullet.

It is no idle talk that the successes of my customers the past four years has been phenomenal. Have you not been beating around long enough to now want to get something **good** and that will **reproduce?**

Why not try Duston this year? I will serve you and serve you well. Send for mating list, it is free. My pens will, as usual, be made up from my strongest lines and the **best** of the season's individuals, mated as Duston knows how to mate.

Prices are **$10.00** a set of **15 eggs, two sets $18.00, three sets $25.00, or $50.00 in hundred lots.**

Send 15c for illustrated catalog.

Whiting's White Diarrhoea Remedy

Is Guaranteed to
Cure and Prevent White Diarrhoea, Chicken Cholera and Bowel Trouble
and to make your chicks
Grow Faster, Stronger, Larger
than any you have ever raised before.

All poultrymen, except those who use Whiting's White Diarrhoea Remedy, know they never raise more than half the chicks they hatch—White Diarrhoea kills them. We guarantee Whiting's White Diarrhoea Remedy will enable you to raise practically every normal chick you hatch.

One 50-cent bottle treats 150 chicks and saves the 50 per cent of them that you have been losing right straight along.

Why go to the expense and trouble of hatching chicks just to let them die because you won't use Whiting's White Diarrhoea Remedy? Get a bottle today. Biggest breeders depend upon it. **50c and $1 a bottle.**

WHITING'S ROUPENE
ACTUALLY DOES CURE ROUP

Swollen heads and running eyes mean roup—use ROUPENE.

We Guarantee a Cure or Refund Money!

ROUPENE prevents contagion. You do not have to quarantine the diseased birds.

ROUPENE not only cures Roup, Canker and Diphtheritic Roup, but it also cures Sorehead, Limberneck, Colds and Pip, and leaves no bad after effects. **50c and $1 per bottle.**

WHITING'S POULTRY AND ANIMAL REMEDIES

DIAMOND BOX MANUFACTURING CO.,

Room 312, 219 N. 2d St., Minneapolis, Minn.

type and color; was first as pullet at Chicago, 1912; has lost nothing. Second, the equal of first in type and color, losing on size. Third, fourth and fifth were close in line.

First pullet, grand type and color, exceptionally strong in hackle and undercolor; a daughter of first hen; was first pullet at Chicago show, 1913. Second, a little beauty; strong in type, losing in color of hackle and wing. Third, fourth and fifth all good, showing lots of quality.

Pens Cockerel Mated.—First, well balanced, showing good type all through; cockerel a trifle light in hackle, but showing strong undercolor in all sections; pullets strong even color throughout, with good heads and legs. Second pen cockerel, grand in surface and undercolor, with good head and beak; unfinished. Pullets evenly balanced; trifle open in barring; strong in type. Third pen cockerel, unfinished; light in surface and undercolor; too open in barring; pullets coarse in barring, but showing extra strong underneath.

Pens Pullet Mated.—First cockerel, good type, well balanced on good yellow legs; good comb and beak; clean and snappy barring all through; pullets evenly balanced in type and clean-cut barring; a good strong pen. Second cockerel, well finished; good comb and head; little coarse in barring; pullets well balanced type; more open barring than first. Third pen cockerel, unfinished; too strong in color; well balanced on good legs; pullets good type; clean-cut barring. It would be a great injustice to the Barred Rock exhibit to pass without comment on exhibition cockerel in coop No. 22, exhibited by Mrs. Charles E. Popham. This cockerel was one of the cleanest in the whole class, showing exceptional barring in all sections; would have been placed high in the awards but for missing flight feathers in both wings.

Buff Plymouth Rocks.

First cock, a great bird in type and color; well finished; strong eye; even in surface all through, with strong undercolor. Second, well balanced type, breaking slightly in color on surface; good comb and head; strong wing and tail, with good undercolor. Third, strong in color; smaller type, losing in all sections to first and second. Fourth and fifth both good color, losing in type and finish.

First cockerel, well balanced; good head and back; a little heavy in body; even shade of buff in all sections, with strong undercolor; champion male. Second, well balanced on good legs; perfect back, good body; unfinished in tail; bad comb; otherwise a grand good bird. Third, fourth and fifth were neck and neck for the honors.

Hens.—First, short in type; good comb and head; trifle too strong in color; good legs and back; strong undercolor; well placed. Second, great type; good comb and head; strong undercolor; good in tail color, but showing mealiness on surface color. Third, even golden buff, top and under, losing in type and color of tail. Fourth and fifth well placed.

Pullets.—First, good in type; great rock body and back; slightly pinched in tail; golden buff in all sections. Second, stronger in color, losing in both type and color to first. Third, good type and color; lost on maturity. Fourth and fifth were in the right place.

White Plymouth Rocks

Cocks.—First, large, strong, vigorous; splendid eye; good body, back and breast; snowy white in plumage; winner of shape special; champion male. Second, near perfection in type, excepting in finish of tail; bad comb; fine eye; yellow legs and beak; lost on comb and tail shape. Third, short in back; good breast; body a trifle short; tail unfinished; lost on condition and type. Fourth, bad comb; narrow in saddle and tail; good breast and legs; strong in eye color.

Cockerels.—First, strong in type; grand body, back and tail, showing good length of keel; well balanced on good strong legs; fiery red eye; bad comb; won color special. Second, too high on legs; bad comb; unfinished; a good bird when developed. Third, fourth and fifth well placed.

Hens.—First, large; good body and breast; slight cushion on back; good comb and head; well balanced on good yellow legs; color special; champion female. Second, smaller in type; well balanced; good in color.

Pullets.—First, a beauty; perfect body and breast; fine back and tail; grand head and comb; best shaped female. Others well placed.

White Wyandottes.

Cocks.—First, a great bird in type and color, showing well rounded curves in all sections; a Wyandotte all over; good comb,

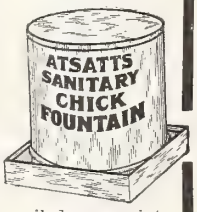
ATSATT Is The MAN Who PUTS PROFIT into Poultry Raising

IF YOU WANT IT, READ THIS NOW



The practical poultry owner learns by experience. After he has cooked hundreds of chicks in the shell, and got tired of low hatches because of faulty, smoky, bound-to-run-up lamps, he pitches them all out and uses nothing but the

"ZERO" SAFETY INCUBATOR AND BROODER LAMP

made on a special Atsatt design. **It's Safe, Clean and Reliable—Safe** because the oil cannot get heated; **Clean** because it never smokes; **Reliable** because it cannot run up and the temperature must remain uniform. Notice the double jacket. All metal. Fits any incubator or brooder. At dealers, $1, or mailed anywhere on receipt of 15c extra.

ATSATT SANITARY SAFE FOUNTAIN FOR BROODERS

can't wet or drown chicks, is easily cleansed and filled, holds a quart and fits any brooder. Heavy galvanized iron. **Try it and you'll never use any other.** 25c at stores, or mailed for 8c extra.

ATSATT'S CHICK FEEDER

is the only chick feeder that absolutely **stops waste.** Lots of room for chicks to get their food, but they can't get into it, stand on top of it, or scratch food out. The top removes instantly for filling and cleansing and springs back into place. Best galvanized iron, so can be used **for wet or dry feed or water.** 10x4 inches—just right size for brooder. 25c at dealers, mailed on receipt of 8c extra.

METAL GOODS EVERY RAISER NEEDS

We make a full line of metal fountains, feeders and lamps, and every one of them has merits over all similar supplies made by anyone else. Those who try Atsatt's are never satisfied with anything else. They save their cost many times over in a season.

Write us Today for **FREE BOOK** With Illustrations and Prices

Some breeders make more money than others, because they've had the foresight to see that it pays to have **Food-Saving, Time-Saving, Money-Saving** equipment, such as Atsatt makes.

ATSATT BROS., 27 Pearl St., Mattapoisett, Mass.

One lamp, fountain and feeder mailed to one address, at one time, for $1.70, so that you can see how fine they are.

TRADE AEM MARK

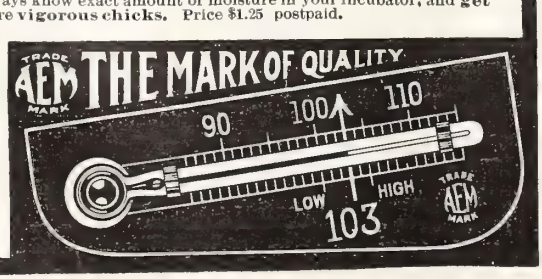
THERMOMETERS NEVER VARY

"AEM" embossed on a Thermometer is an absolute **guarantee** of selected **materials,** skilled **workmanship,** thorough **testing** and unquestioned **accuracy.**

When you are buying an incubator, brooder or hover, see that it is equipped with the **"AEM"** Thermometer. **Don't take chances.** Remember, an inaccurate thermometer may "cook" or "chill" your hatches, causing a loss on a single setting that would pay for more than a dozen **"AEM"** Thermometers, the thermometer that **never varies.**

If your dealer can't supply you with an **"AEM"** Thermometer or Hygrometer, **refuse every other kind** and order direct from us.

These Are the Prices, Postpaid:



"AEM" Thermometer for any Incubator	**$ .75**
"AEM" Thermometer with Patent Electric Light Attachment	**2.50**
"AEM" Certified Incubator Thermometer	**1.00**
"AEM" Brooder or Hover Thermometer	**.75**
"AEM" Electric Alarm Thermometer	**4.00**

Special Prices in Quantities

Millions of chicks die in the shell because of improper moisture regulation. **Use an "AEM" Hygrometer** and always know exact amount of moisture in your incubator, and **get bigger hatches** of bigger, more **vigorous chicks.** Price $1.25 postpaid.

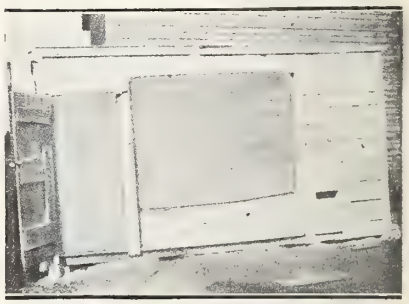
SPECIAL OFFER Extended 30 Days

To enable those who have not already ordered, to take advantage of the 25% discount



Peerless Poultry Protector

Is the only Snow White Disinfectant Coating on the Market

For inside and outside use on Poultry Houses, Incubators, Brooders, Coops, Feed-Bins, Nests, Barns, Fences, and all other places where **Light, Cleanliness, Sanitation, Elimination of Germs and Vermin** is desired as well as a snow white surface which can be washed as often as necessary without injury to the coating.

One of the thousands of poultry houses DARK—DINGY—UNSANITARY

The same house coated inside and out with the Snow White Disinfectant Coating at a total cost of less than $3.00. This work was done with a spray.

It takes about five pounds of this material to make a gallon of liquid and a pound properly mixed, will cover from 20 square feet on real rough surfaces to 35 square feet on smooth surfaces two coats.

Prices in less than ton lots

350 pound	**Barrel**	.....	**$25.00**
200	**"**	**"**	**15.00**
100	**"**	**Keg**	**9.00**
25	**"**	**Box**	**3.00**

Less 25 per cent discount for the next thirty days.

FIGURE THE COST FOR YOURSELF and then you will recall that there is nothing on the market today for double the cost that will do the work which can be accomplished by using the snow-white disinfectant coating.

REMEMBER THAT YOU GET A SNOW-WHITE INTERIOR for only a fraction of a cent per square foot and you can use the same material for outside work provided you use two coats. It makes a weatherproof job which will last two years on the average surface.

WE GUARANTEE SATISFACTION IF PEERLESS POULTRY PROTECTOR IS USED ACCORDING TO OUR PRINTED DIRECTIONS.

You should take advantage of this special offer DON'T PUT IT OFF.

Peerless Poultry Promoter
Port Richmond, New York

Pinehurst.

Among the pretty suburban homes of Ohio, Pinehurst, a short distance out of Oberlin, ranks with the best. The main poultry building of this farm is 100x18 feet. It has glass and muslin covered windows, which afford plenty of light and fresh air. G. M. Smith, the owner of Pinehurst, is a fancier of strictly high-class birds, and his Golden and Silver Campines are capturing blue ribbons in some of our classiest shows. In the last Cleveland show he entered four birds and took 1st cockerel, 3d pullet and 2d pen. His matings will contain these birds, along with many other ribbon winners. Write to him, mentioning A. P. J., and he will send you his mating list and stock prices. Address G. M. Smith, Pinehurst, Oberlin, O.—H. H. Coburn.

Quick Growth in Little Chicks.

Is only obtainable when they are fed an abundance of green stuff. Green feed, such as sprouted wheat, rye or oats, is always quickly, easily and cheaply produced in the Successful * Sectional Double Steel Wall Grain Sprouter. Dry grain contains a lot of dead starch, which is oftentimes detrimental to their quick growth. We therefore recommend to germinate or predigest the grain, which can be done with very little trouble and outlay in from twenty-four to forty-eight hours in one of these high-grade sprouters.

When it is further considered that the feeding of sprouted oats is the cheapest feed to give your old fowls to maintain their health and vigor, to induce them to lay more, to reduce the cost of feeding them, there is no doubt that the purchasing of one of these Sectional Sprouters will be found a money-making investment.

Their indestructible construction enables you not only to use it this year and next year but for years to come. If you have not written for their descriptive matter yet, we advise you to send at once for their 8-page folder, containing instructive and interesting information. Address Des Moines Incubator Co., 561 Third St., Des Moines, Iowa.

He Breeds Show Birds.

One of the persistent winners at all of the large shows, and one of those who seldom fails to secure a ribbon, is Stewart Haddock. Breeding and showing Single Comb White Leghorns, some of his most recent winners were first prize pullet and sweepstakes championship special for best pullet in the entire show at Philadelphia. At Buffalo he won first hen, second and fourth cock and special winners, second cockerel, first, third and fourth pullet, also third and fourth pen. He has beyond a shadow of a doubt some very fine birds, and as he makes a specialty of mating pens it will pay you to write for his prices. Address Stewart Haddock, Box A, Poughkeepsie, N. Y.

Good Prompt Service.

To putting out remedies that do just what he says they will and the fact that every order received in his factory is shipped out thirty minutes after he receives same, is just two of the many reasons for the wonderful success of Geo. Sixeas, of Newcastle, Va., whose advertisement appears in the current issue.

Our Mistake.

In our January issue through mistake we only gave F. M. Eakin, of Bucyrus, O., credit for 4th hen and 1st pullet as his winnings on White Wyandottes at the Chicago Coliseum. This is wrong and we hasten to correct same. Mr. Eakin won 1st cockerel, 1st young pen and 3rd pullet.

Chicago Coliseum.

We desire to correct the article in our January issue which gives Alfred Bloese credit for all blue ribbons on Golden Sebright Bantams. First hen in this class was won by Raymond J. Christensen, of Evanston, Ill.

U. R. FISHEL'S AD in this issue will interest you. Read it.

SUNLIGHT POULTRY FARM E. N. Lemon, Owner **LYNCHBURG, OHIO**

The Cyphers Incubator Co., Buffalo, N. Y.

If there are readers of the A. P. J. who still look upon this "great poultry industry" as merely the chicken business and who fail to grasp its annual billion-dollar value, then they should hasten and make a trip to Buffalo, N. Y., and see as we have seen a gigantic busy factory whose annual output of incubators, brooders and poultry supplies alone amount to over one million of dollars, and they will better comprehend the possibilities of this industry in the future.

Our business for a great many years has led us to travel over from 20,000 to 30,000 miles yearly through the United States and Canada making poultry shows and visiting breeders, to judge, to mate and to advise. We have seen this poultry business grow, have seen the breeders and poultry-raisers' success; we have been enthusiastic, for we have never seen anything but the best of success where real effort was put into the business by either man or woman, and never once in all our years has the limit line of production or value been in view. Ever upward and onward has demand increased the production with assurance of safe prices that are higher and better right now than ever before. But with all this it really remained for this little visit of ours to the Cyphers Incubator Co.'s plant to show us what this business of poultry from every viewpoint has come to be. It broadened our view and, if possible, it has increased our well-known confidence in the business. It has done us good.

Others have told you of this great plant—pictures have been shown; but your imagination no more than mine can correctly picture or can you comprehend the full extent or value of this leg of the business without personal observation. We can imagine a great deal, but we could not even dream of half that is to be seen in the actual.

While the factory is not entirely completed at this time, there are two great buildings, costing over $250,000, completed, each about 150x400 feet and built entirely of iron, brick and concrete, making them absolutely fireproof; beside these in the rear is the engine and boiler house and three large kilns for properly drying all lumber and a 50,000-gallon iron tank 160 feet up in the air for a special water supply system. The office building is still to be erected and when all complete there will be upwards of $350,000 invested here alone on these six acres of ground for the manufacture of poultry supplies and the handling of foods, etc.

Let us consider the possibilities of this factory—the brains and the money back of it have no limit, for real confidence in the industry is the foundation for all. Here a completed incubator is turned out every two minutes of every working day, while brooders are made nearly in the same proportion. Each has its department and each department is complete. Machinery is an important factor, and the great machines seen here respond to the will and touch of the operator, for every part of the wood and iron work of the incubators are made here under the one roof. Here was seen single machines costing more money than the entire cost of any incubator factory ten to fifteen years ago. The material used is of the best quality. Inspection is thorough and skilled labor the feature of this great plant.

From their own lumber yard in the rear of the factory, where from one to three million feet of lumber is carried in stock, the material passes through their three kilns and dry houses to the factory proper, and then travels in the several stages of manufacture from one department to another, ending in the final inspection room, when the seal of approval and the absolute guarantee of perfection are given; then to the shipping department, and from their own station are hauled away to fill the demands for hatcheries in every section of the wide world. The Cyphers products in incubators, brooders and a complete line of poultry supplies are favorably known and their reputation stands primarily on quality. They may not be the best, but they are as good as any we know, and in their proper use success is assured.

Back of the great poultry industry are the hundreds of thousands of breeders who find profit and pleasure in poultry keeping, and just so we find here back of this great manufacturing industry a few men who know and have unlimited confidence in the industry and its demands; they not only invested their money but have also given the best in them to assure every possible success to the industry and those, connected therewith; their purpose is good and they deserve the best of success for what they are and for what they have done.

Grant M. Curtis, the president of the Cyphers Incubator Co., is the real man behind the gun. He has made not only possible this wonderful manufacturing concern, but he has also as much if not more than any other man brought the poultry business up to its present high standard. With highest ideals and ever the champion of more and better poultry, he has devoted his life, and we hope can now with much satisfaction see the fruits and reap the awards he has earned so well. Eighteen years ago when Mr. Curtis made his first trip East in the interests of the A. P. J. we had the pleasure of meeting him and have all these years admired him, but only at this time to say that we, like all others, have never been able to fully comprehend his personal worth or the full value of his work to the poultry industry, for it is greater than we know.

The Cyphers bulletins, dealing with all sides of the poultry question, are the latest feature of this concern. They are instructive and invaluable to the breeder, as they deal with each subject fully and well show what can be expected from any or all branches of the business. They are sure to become popular for they are practical and are easily to be had.

Our visit there was a most delightful one. In charge of Frank L. Platt and Geo. H. Gillies, the secretary, we went over the entire factory and were shown and told in detail the process of manufacture, which was of extreme interest to us and gave us a larger, broader and better insight into what the real poultry business has come to be than we could of had in any other way. We thank these gentlemen for all courtesies extended. We congratulate Mr. Curtis and his associates on their success and confidence in business and the value of their products, and we more than ever admire the poultry industry that has made such a

plant and such a business possible.—H. P. Schwab.

Among Our Advertisers.

BY H. H. COBURN.

Mr. and Mrs. H. J. Bennett are partners in raising and exhibiting Single Comb White Orpingtons at their farm, Heart's Desire, Connersville, Ind. Their buildings consist of one long hen house and six colony houses. To these they are now adding two more houses, caused by their big increase in business. At the Chicago Coliseum show they had three entries and won third hen and fifth cock. They are at present mating five pens for the egg and chick trade, these pens being headed by winners from different shows. Look up their ad and write them.

First and fourth hen, first and fourth cock, second and fourth cockerel, second and fourth pullet and first old and first young pen were the Chicago Coliseum ribbons won by Ross Swartout of Newport, Ont., Canada, with his Rose Comb Black Minorcas.

Frank E. Hering of South Bend, Ind., won first old pen, second young pen, first and fifth pullet, first, third and fourth cockerel, second and third hen and third and fifth cock at Chicago Coliseum with his Silver Campines.

An exhibit at Madison Square Garden which was the recipient of much admiration was the Buff Wyandottes of W. F. Schultz of Cuyahoga Falls, Ohio. Entering four birds, he captured first cockerel, second cock and fifth pullet. Showing at the recent Cleveland show, he won first and second cock, second hen, fifth pullet, also third and sixth pen. With these winners he is mating eight pens. He has the goods. Look up his ad in this issue and write him.

Winning first and second cockerel, first pullet, first pen, fourth cock and best display at Ashtabula, Ohio, then second cock and second pullet at Buffalo, then fourth cockerel and fifth cock at Cleveland is a record that shows H. H. Holmes of Ashtabula, Ohio, has some Rose Comb Rhode Island Reds that persist in winning. The Red competition is so strong that he who gets even a place must indeed show fine birds. Mr. Holmes has the most modern of plants fully equipped and is entirely lighted by electricity, while the houses are lathed and plastered. He is at present mating five pens, so you had better read his ad and write him for prices.

Showing their famous Grand Champion Boston cock at Madison Square Garden, Simmons & Crittenden of Geneva, Ohio, won second cock, second pen and fourth pullet. These and a great number of other ribbon winners are now in the mating pens getting ready for the egg trade. At the recent Cleveland show Mr. Simmons was the judge of Reds. He placed the ribbons where they belonged and to the satisfaction of all exhibitors. It was a large class and contained many of the best birds.

At the National Club meet of Buff Wyandottes held in Rochester, N. Y., the Rocky Run Farm of Northfield, Ohio, captured first old pen, fourth young pen, first and tenth hen, ninth cock, third and fifth cockerel, third pullet and best display. They were the only exhibitor to win more than one first prize. These and many other winners will be found in the Evergold mating pens.

B. H. Scranton of Rising Sun, Ind., has exhibited in many shows and has yet to meet his first defeat. His Single Comb Reds always take ribbons, no matter where shown. At the Chicago Coliseum in a large class of high-class birds he won first and third hen, second and third cock, second, third and fourth cockerel, second and fifth old pen and fourth young pen. His motto is, "To give my customers as good as I have myself." Write to him for his mating list.

Entered with the very best in the land and taking first young pen, fourth hen, first cockerel and third pullet was the record of F. M. Eakin of Bucyrus, Ohio, at the recent Chicago show held in the Coliseum. These are just a few of the many winners that he has on his up-to-date farm.

Eggs from choice pens composed of their Chicago Coliseum Golden Campine winners are what Gensemer Bros. of Creston, Ohio, are advertising. They won first hen, first and second cockerel, first, second and fourth pullet, also second and third young pens. At the same show in the hottest Silver Campine contest ever held they won fifth cockerel and fourth cock. Write them for prices.

W. S. Cobb of Jackson, Mich., kept up to

CLEVELAND'S S.C. BLACK MINORCAS

At Lansing, Dec. 27, 1913, and Jan. 3, 1914 we made 11 entries and won as follows: 1st, 2nd, 3rd and 4th pullet; 1st and 2nd cockerel, and 1st pen old. Eggs for hatching in season. Write for price list.

Elmer Cleveland, :: Member of S. C. Black Minorca Club, :: **Imlay City, Mich.**

WHITE WYANDOTTES

Again we win at Philadelphia, Pa., December, 1913, 1st and 5th Pens, 2nd Cockerel, and 5th Hen; also Silver Cup for best display, in the largest and best class of White Wyandottes ever shown at Philadelphia. We were showing against 29 exhibitors. At Philadelphia, December, 1912, we won 1st Cockerel and 3rd Pen. Our birds are big winter layers. Eggs from Philadelphia winners, $5.00 per 15; $8.00 per 30; $10.00 per 45. Other prize pens, $3.00 per 15; $5.00 per 30. Utility, $2.00 per 15; $8.00 per 100. Baby Chicks, $8.00 per 50; $15.00 per 100. Send for Free Catalogue.

R. J. WALDEN Box A MIDDLEBURG, MARYLAND

his old rule of never failing to land a blue ribbon at Chicago. Showing his White Wyandottes at the Coliseum he captured first pullet, second hen and third cock. He has been a Chicago winner for years.

Mrs. A. A. Carver of Seville, Ohio, was another blue ribbon winner at the Chicago Coliseum. With her Golden Campines she took first cock, first pen and second hen. She has recently imported a male Golden Campine known as one of the greatest birds in England. This bird was purchased direct from Rev. Jones. With these winners and her new holdings she is in a position to supply your egg wants. Write to her for prices.

A most remarkable list of winnings at the Chicago Coliseum were those of Fred E. Harrison, Menominee, Mich. With his Single Comb Reds he won first and fourth cock, second and fifth hen, first and fifth cockerel, first, second, third and fourth pullet, first, third and fourth old pen and first and fifth young pen. Mr. Harrison is mating the largest and best pens this season that he ever has. If you want eggs you better write promptly, for he has to return money for unfilled orders every year.

Second pullet bred pen was the ribbon captured by Rosemont Farm of Webster Grove, Mo., showing Single Comb Brown Leghorns at Chicago Coliseum. This farm has a mighty fine list of cockerels and pullets for sale and they are mating up some excellent pens. Be sure to write them.

W. L. McMillan of Fort Wayne, Ind., was a Chicago exhibitor, his Rose Comb Reds winning first pullet, second cockerel and third cock. His birds are of a very fine type and color, and this season's matings will contain these and a number of other winners. Write to him; he has special bargains in cockerels.

Another Chicago Coliseum winner was Frank C. Cole of Van Wert, Ohio. His Buff Plymouth Rocks won first young pen, first pullet, third hen and fourth cockerel. His birds are remarkable for their Wyandotte type and even golden buff. These winners and others of a like type compose his this year's breeding pens. Be sure to write him for his mating list and prices.

Again the Herrick Poultry Yards of Bancroft, Mich., were Chicago Coliseum winners. Their list of ribbons include second cockerel, third cock and third young pen. These Single Comb Black Orpingtons have won at Chicago and Detroit for the past ten years, and always get a share of the blue ribbons. Their pens for this season's egg trade are all headed by winners and almost every female has a show record to her credit. The demand for his stock always exceeds the supply, so it will pay you to write him promptly.

Showing their Single Comb White Orpingtons at the Chicago Coliseum, the Aldrich Poultry Farm, Columbus, Ohio, won the following: First and third cock, second and fourth hen, first, second and fifth cockerel and first old and first young pen. This together with their other long list of winners gives them a great record. Their mating pens for the coming egg trade can not be beaten in this country or in England. Last year they hatched and raised over two thousand of these S. C. White Orpingtons.

F. M. Farrant, of 745 Prairie avenue, Kalamazoo, Mich., is an artist of no mean ability when it comes to mating and raising high-class Single Comb Brown Leghorns. His strain of birds, no matter where shown, always capture ribbons. Winning at Chicago for several years, his list of prizes this year included first pullet-bred cock and first and fifth cockerel-bred pullet. The first Chicago pullet was out of his first pullet of a year ago. His customers' winnings for this year included Detroit, Grand Rapids, Kalamazoo and many others. Look up Mr. Farrant's ad and write him for prices and mating list.

H. A. Keister and his Rose Comb Black Minorcas are located on a 25-acre farm just on the edge of Bangor, Mich. For several years Mr. Keister has been striving to give his birds that green-black plumage free from all purple barring, and has at last met with success. For this season he is mating five very select pens headed by winners from such shows as Madison Square Garden, Boston and Chicago. He has some high-class birds for sale at reasonable prices. Write him for catalog and mating list, so that you can get in right on high-class Rose Comb Minorcas.

One of those breeders and exhibitors who holds a prominent place in the poultry world is Mr. B. M. Billings, a breeder of

Rose and Single Comb Rhode Island Reds, living at Oberlin, Ohio. When he first started he made it a rule to buy the best of birds, and by careful mating he is now furnishing prize-winning birds for some of the biggest shows. His farm consists of 170 acres about two and a half miles out of Oberlin, and anyone that wishes to visit his farm has only to drop him a card and he will be glad to meet you with an auto. At the recent Cleveland show, where his competitors were Chicago, New York, Boston and Columbus winners, his Single Comb Reds won first cockerel, second pullet, the silver cup for best S. C. cockerel, also both shape and color special. These are just a few of his very large list of winnings. He is mating twenty-five pens for the egg trade and has some very choice stock for sale. Look up his ad and write him for price list.

Old Honesty Hatchery.

Just about eleven years ago G. H. Kichline sent out his first shipment of day-old chicks. By honest and fair treatment and the fact that his chicks were received by the purchaser in a strong, healthy condition he has built up a business that places his Old Honesty Hatchery among the largest and best in the world. He deserves a great amount of credit for being the inventor and builder of all machines used in his plant—machines that are delivering the goods. He is also the inventor of the Old Honesty heater, which is giving the greatest of satisfaction wherever used. Ten of his many acres are devoted to prize-winning fowls with which to supply eggs for Old Honesty Hatchery. Their shipment last season was a hundred thousand chicks. This included several of the many poultry farms in the immediate neighborhood, and these chicks went to every nook and corner of the country. The baby chick route is the surest way to get started towards success. Driving through the country, just take notice and you will see the back number farms begin to hatch chicks in August and September, while at the live, up-to-date ones the pullets are beginning to show signs of laying. Think this over and get into the live, progressive class. Buy chicks from the Old Honesty. They have sixteen leading varieties—White, Buff and Black Orpingtons, Barred Band White Rocks, White and Brown Leghorns, Reds, Wyandottes, and Sicilian Buttercups. The latter variety was the largest class at the late New York show. A large plant very well managed, I can readily recommend them. Write for their catalog and prices. Address Old Honesty Hatchery, New Washington, Ohio.

How the Belle City Reached 276,000 Users.

This statement suggests a big modern factory and that is what they have, but it doesn't tell the story of the small beginning, the original little one-storied building where the first Belle City Incubators were made, the knocks and the boosts that made up the chapters year by year and the winning of the eight world championships. Fourteen years ago, when Jim Rohan, then a mere youth, began making Belle City hatching outfits, he summed up his manufacturing policy in the words he had received when a boy from his father, "Jimmy, always be sure to give 100 cents' worth for every dollar you get." The business has grown since, but the policy has remained the same. Today the Belle City Incubator Company's plant at Racine, Wis., is the largest factory in the world devoted exclusively to an incubator and brooder of one size. A trip through the various departments is most interesting, the work being carried right through from the beginning to the packing, ready to be delivered to your door. A new book, "Hatching Facts," has just been published by Jimmy Rohan. It tells just how every part of the Belle City Incubator and Brooder is made, giving illustrations. This book will be sent free. Just address Jim Rohan, Pres., Box 27, Racine, Wis.

Campine Club of Ohio.

At the recent Cleveland show the Campine breeders of Ohio met and formed a state club to be known as the Campine Club of Ohio. The object is to promote and encourage the general breeding of Campines throughout the state. After several very intelligent speeches the following officers were elected: T. E. Gensemer, president; Ted E. Wanstall, vice-president; D. H. Hopkins, secretary; G. M. Smith, auditor; and C. H. Lines, R. A. Dinsmore and G. H. Calhoun as members of the executive committee. The best wishes of the American Poultry Journal go with you, gentlemen. May your club grow and grow like an oak tree, large and sturdy.

Rockland Farms D. Lee, Prop. Benson, Maryland

Chicken Chowder makes Chesty Chix.

It makes them grow twice as fast. This means large profits, heavy egg production and vigorous chicks that withstand disease. You can't afford to be without this *growing feed* now, any more than you could afford to be without it last winter when you proved that "if Chicken Chowder won't make your hens lay they must be roosters." Feed Chicken Chowder in addition to Purina Chick Feed and double your profits. For sale by leading dealers. Order from your dealer today.

Checkerboard Poultry Book FREE!

For your dealer's name we will send you this 48-page Poultry Book, containing plans of houses, breeding and feeding charts, space for daily egg records, cures of diseases, care of baby chicks, etc. It also contains information about Col. Purina's half price galvanized iron Chick Drinking Fountain (2 for 25c) and more details about his Automatic Chicken Chowder Feeder (50c). Write today.

Col. Purina, Purina Mills, 801 Gratiot Street, St. Louis, Mo.

Edgar Briggs Box 144 Pleasant Valley, N. Y.

F. M. Love.

The breeder of Barred Rocks living at Lewiston, Ill., was the winner of 2d cock at the Chicago Coliseum, and not W. D. Holterman, as shown in our January issue. This Barred Rock cock of Mr. Love's was purchased as a cockerel from the well-known yards of Bradley Bros.

Great Winners.

Out at Freneau, Monmouth county, N. J., there is a farm devoted to producing S. C. White and Buff Leghorns that so successfully combine utility qualities with a remarkable prize-winning record that they are popularly known as "The Twentieth Century Dual Purpose Fowl." Mr. Punderford, the owner of Monmouth Farms, is a well-known poultry judge and successful breeder and has won many firm friends by his straightforward dealings. His S. C. Buff Leghorns have won the first pen at Madison Square Garden for five consecutive years, a record unparalleled by any other breeder. The recent winnings of Monmouth Farms show that the quality has not deteriorated any the past season, but still lead in competition all over the country. They were winners at the Atlanta, Ga., show of 1912, at the Hagerstown Poultry Show last fall, at the New York 1913 Grand Central Palace Show, and at the recent Madison Square Garden Show. This record, supplementing their previous winnings at Philadelphia, Boston and other big shows, is the best evidence of the remarkable quality of Monmouth Farms Leghorns. Mr. Punderford's prices are very low, and we suggest that you write for his catalog, which includes a beautiful colored insert, suitable for framing. Address Monmouth Farms, Box 23, Freneau, N. J.

Mount Pocono, Penn.

While traveling through eastern Pennsylvania recently, the representative of this paper had the pleasure of visiting the Mount Pleasant Farm at Mount Pocono. Here he saw both in buildings and stock everything necessary to the successful production of eggs and poultry of the highest order. A plant that had, in design and finish, every sign that it was built by men of experience; men who were working with a definite end in view. In speaking of the great vitality evident in the Mount Pleasant Farm layers and the breeding of heavy layers, Mr. Leach, the proprietor said: "The egg is to all intents and purposes a perfect reproduction of the hen; then egg-laying is not the trait which we wish to develop in the hen—we wish to develop this power of reproduction. The power to reproduce is increased by developing vitality. A great layer, a bird of great vitality, cannot be bred from a hen that has a great record as a layer, because in making this record she has so weakened each individual reproduction of herself—the egg—that a healthy pullet cannot develop. At the Mount Pleasant Farm the Single Comb White Leghorns are bred for vitality, for the ability to reproduce—to lay eggs. By careful and systematic feeding they are taken through the pullet year with but a fair average egg yield and enter their breeding year full of strength and vitality to lay eggs that will hatch—hatch chicks that will live and grow to be birds of great vitality. It is these eggs that we ship to our customers, or chicks from these eggs. We do not have great record layers in our brooding houses; our farm is purely a breeding establishment. Our customers who are after great egg yields for commercial purposes have but to feed our pullets for that purpose; they will lay, for they are bred with great vitality." The Mount Pleasant Farms have faith in their ability to produce eggs that will hatch; they replace all infertile eggs and guarantee the safe delivery of day-old chicks.

Victors Again.

Considerable excitement prevailed in the Ancona Isle at the late Madison Square Garden Show. The class was a large and strong one. After the smoke had cleared away it was found that Sheppard's famous Anconas kept up their record of carrying away the honors. Mr. Sheppard won eight times as many first prizes as his nearest competitor. His first prize Rose Comb cockerel and first prize Single Comb pullet were pronounced two of the best Anconas ever exhibited at the garden. He deserves great praise on the quality of his birds, for he has been winning a great number of the blue ribbons in the big New York show for the past eight years.

American Bred White Orpingtons.

It has been but a short time since the English breeders boasted that it was not possible for breeders of White Orpingtons in the United States to breed up birds to take first prizes at the exhibitions in which English birds were shown, and up to a recent date it was true, so far as young stock was concerned, as the English cockerels, especially, were so much heavier than American bred birds that they nearly always were winners. That this is not now necessarily true is shown by two facts. The first is that the winning English birds were not taken back to England. They were among the best show birds in England, and sending them away deprived England of at least a large part of their finest breeders, and they were placed in the American pens, so that in blood and pedigree the American Orpington stock is at least equal to the best in England.

As the breed was comparatively new in the United States and the prices of the first prize winners were high, there were very few even of the largest breeders who were able to secure enough of the high-class stock to secure the best results, and the methods of feeding the young stock in England to secure weight and size were but little known, so it is not to be wondered at that it was deemed essential to import cockerels in order to secure first prizes in the leading shows.

But the Americans have gained experience as to the feeding and care, and the number of fine imported birds and their progeny is now so great that there can be only the claim that our climate is such that with the best of stock and the best of care we cannot equal the birds raised in their native land.

That this is not true is clearly proved by the results of the exhibitions of the present season. At the exhibition at Chicago, December 12, 1913, there were three cockerels up to or above standard weight, and at New York, at Madison Square Garden, December 26, 1913, the first three cockerels were all above standard weight, one hatched in April weighing above nine and one-half pounds, one hatched in March, over ten pounds, and one hatched in February, over eleven pounds. All of these birds in both shows were hatched and reared upon one poultry farm, whose winnings at New York were the greatest ever made in the Single Comb White Orpington class, and this same firm also secured the first prize for young pen at Chicago on birds of their own breeding.

It is no wonder that this firm has had such success with its young stock, as it had a greater number of fine birds for the foundation stock than had ever been gathered in one plant, and had the experience of one of the best English breeders to mate, care for and condition its birds.

These were the reasons given by one of the members of the Aldrich Poultry Farm of Columbus, Ohio, when asked how they had achieved such remarkable results.

He also stated that they had made great advances the present year over last season, they not only having their prize winners of last year but all of those of the present year and the unshown progeny to mate, and in the twenty-five pens mated up there would not be a male bird under standard weight, and they will have at least one hundreds hens and as many pullets, every one of them up to or above standard weight. The color of their birds at these exhibitions was such as to attract all beholders, equaling in purity the best of the older white varieties.

They say that in order to secure young stock of full weight for the exhibitions it is necessary to hatch the birds as early as possible, so that they will be well grown before the hot and dry weather of midsummer, so if eggs are wished from them they should be ordered early, and all their flock will be mated by January 1.

Their catalog of 56 pages, showing their last year's mating list and their mating list of 1914, is now ready for distribution and will be sent upon application to all desirous of securing stock or eggs.

Simple or Simplex Brooding.

Gerard S. Jordon, of Freehold, N. J., writes: "To my mind the most difficult problem there is in poultry keeping is the artificial brooding of young chicks. The heavy mortality during the brooding period is one of the greatest drains on the poultry keeper's profits. Many are the reasons that can be assigned for this high mortality. The principal reason in my mind is an inefficient brooding system. The majority of the diseases in the baby chicks can be directly traced to this cause. Hens will brood 100 per cent better if given fine weather, but the natural system is not adaptable to the large commercial egg farm or the small intensive poultry-raiser. The most widely used system in artificial brooding is the individual lamp and hover, used indoor and outdoor, in specially constructed coops or in brooder houses. To me it was always a perplexing question to determine the correct amount of heat units there should be under the hovers at night. A little too much heat and you get an aftermath of bowel trouble, not sufficient heat, and your chicks get chilled and crowd. In the Spring of 1913 I wanted to raise about 1,500 chicks. I installed a Simplex Brooder Stove, and in the month of April placed 970 chicks around this stove. The results were marvelous. At the end of seven weeks my records showed I lost 6 chicks, and 11 of these were accidentally killed by a box falling on them. The conclusions I have arrived at are that the Brooder Stove System is without a parallel for its cheapness and efficiency in raising husky chicks."

Single Comb White Leghorn breeder will do well to look up the advertisement of Harry A. Muntz, Elgin, Ill., which appears on another page of American Poultry Journal. Mr. Muntz is breeding Leghorns that show the true down to date type. At the recent Coliseum Show, Chicago, his winnings were 2nd cock, 2nd

G. H. Kichline, Prop., Dept. A, New Washington, O.

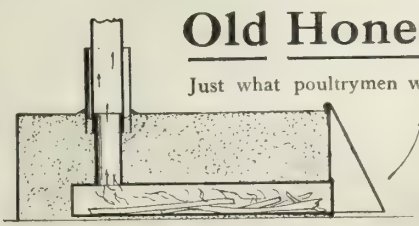
A Few of Our Thousands of Testimonials:

Wheeling, W. Va., Feb. 24, 1913.

Dear Sir:

I wish to thank you for your shipment of 300 S. C. W. L., sent me in 1911. When I got them at the express depot they were as fine a lot of chicks as I ever saw, every one alive and active. I raised nearly all of them and have now as fine a lot of White Leghorns as can be seen in this part of the country. At present I can sell almost all the eggs I get for setting and get a good price. Thanking you for past favors, I remain yours truly,

R. A. HANKET,
Glenwood, Wheeling, W. Va.



Ridgway, Pennsylvania, May 5, '13.

Old Honesty Hatchery.

Dear Gentlemen: I received the 200 baby chicks April 30 in an O. K. condition. I want to thank you for prompt shipment; the chicks look so strong and healthy, which makes me believe that Old Honesty Hatchery is the place to buy chicks. I wish you good luck and remain yours very respectfully,

LEANDER CARLSON.

Old Honesty Heater Co.

Just what poultrymen were looking for this long time. **A new invention** to get Winter eggs and raise chicks successfully. Patent granted March 26, 1913. Write for circular (free). Tells you all about it.

OLD HONESTY HEATER COMP'Y.
Dept. A New Washington, Ohio

ockerel, 5th hen, 4th pullet. At the lgin Show, January 5-11, in a class of ne hundred and fifty of the best Leghorns ever cooped in Elgin he won 1st, nd cock; 2nd, 3rd, 4th cockerel; 1st, 2nd en; 4th pullet. The same quality runs ll through Mr. Muntz' flock. All show he same graceful curves with beautiful weep to back and low-carried tails. We eel sure that Mr. Muntz can more than atisfy you if you are looking for quality Single Comb Leghorns.—J. C. Johnston.

Still At It.

When you get to doing something real ften it becomes a "habit." Judging from ll appearances, the White Wyandottes of . C. Fishel & Son have contracted the abit of taking "ribbons." At Cincinnati hey carried ribbons away by the yard, everal of them being blue. The following veek Fisheldottes in the hands of J. F. trasburger took several ribbons at the hicago Coliseum. After that Fishel strain was shown in Atlanta, Ga.; in fact, you find them in every show. No matter where you live—North, South, East or West—the showing of Fishel strain means contracting the "ribbon habit." For years they have been outclassing all rivals no matter where shown; they are the product of a lifetime's study, devoted to making them perfect. Raised on free range, with plenty of room to roam, insures a vigor never found in penned-up birds. They raise them by the thousands and devote their entire time and attention to but one thing—raising birds that will give you the ribbon habit.

A Good Motto.

"Honesty and square dealing"—this motto has been a large factor in the wonderful success of the Twentieth Century Hatchery, of Chatfield, O. Blum & Co., the owners, have over thirty farms in and around Chatfield, raising Standard bred poultry on each one; each breed is on a separate farm, each flock consisting of about 100 birds. Each and every flock is headed by a high-class male and many of the females are of exhibition stock, thereby assuring their customers of a high type of bird. Mr. Blume personally supervises each farm and no "alien" is ever tolerated on the respective farms. This vigilance insures healthy and vigorous chicks that can travel hundreds of miles with practically no loss. With a capacity of 40,000 eggs they are in a position to furnish you any breed or type of day-old chicks that you may want. Write today for their catalog on day-old chicks and poultry supplies, of which they carry a complete line.

Fowls Want Green Food.

Every poultryman knows how fowls devour green food when shut up in pens or yards, or even in the summertime when running around and the grass has begun to wither and dry. The old method of throwing cabbages, beets, etc., on the ground has not been very satisfactory, as the food quickly gets soiled and filthy. Some practical yet inexpensive device has long been needed—something that would hold vegetables and green stuff as long as needed. The device is here in the form of Carter's Sanitary Green Food Feeder. This keeps the green stuff clean, prevents waste and will not get out of order or injure the combs or heads of the fowls. Many big poultrymen are using it and indorse it very highly, so it will pay you to write the manufacturer, H. F. Pierce, 482 Wadsworth Bldg., Portland, Me., asking him to send you a descriptive circular. He sells this feeder under a guarantee of satisfaction or money refunded.

The Natural Hen.

It is quite probable that a great many of our readers are already acquainted with J. F. Siems and his natural hen incubator. Mr. Siems has solved the problem that has confronted incubator manufacturers practically ever since the first one was built. It makes use of the actual hen and does away with lamps, oil, expense, hot, death-dealing fumes, etc. His incubator is practical in every way and leaves no uncertainty about bringing forth strong, healthy chicks. In the natural hen incubator, where Mrs. Hen is the controlling feature, she is kept strictly on the job until the entire hatch is produced. You will find Mr. Siems' advertisement in this issue. Write for his catalog, addressing Natural Hen Incubator Co., 1349 Constance St., Dept. 4, Los Angeles, Cal.

Poultry Raiser Invents Hatching Chart.

Through a crude diagram which was in the form of a circle containing 21 spaces, one for each day of the hatching period, a poultry raiser made a suggestion to the company of which he purchased his incubator that has resulted in the publication of the only hatching chart in the world. This hatching chart and a valuable free booklet, entitled "Turning Egs Into Chickens Into Dollars," will be sent postpaid to all who request it of the publishers, The Rayo Incubator Co., 1012 So. 13th St., Omaha, Nebr. The booklet also gives full information about the remarkable Rayo Incubators and Brooders, which run for three weeks on a gallon of oil.

Two Entries—Two Winners.

With 51 White Wyandottes in line, Judge Russell at the Jackson, Mich., show said the "class is equal" to the Chicago Coliseum show. H. N. Hanchett, of Jackson, Mich., who made but two entries, carried away 1st pullet and 1st pen and also took 1st, 2d and 3d cockerel and 1st, 2d and 3d pullet with Blue Orpingtons. Mr. Hanchett and his Blues took a few Chicago ribbons, getting 2d and 4th cockerel and 4th and 5th pullet. He is now getting ready to include a few more winners in this list, as he is showing at Indianapolis and Detroit.

Red Sussex Farm, Marysville, Mich.

This farm contains between four and five hundred acres and is located on the turnpike about two miles from Marysville, with good shipping facilities at both Port Huron and Marysville. Several acres of this large farm are especially adapted for an ideal poultry farm, being high and dry. Mr. Myron W. Mills, the proprietor, and H. H. Coburn, his manager, have adopted "Red Sussex," readily seeing the great future

that is in store for them. To a firm of such unquestionable financial standard and sound business judgment, nothing but the best Red Sussex obtainable would do. So they are importing England's finest. A large consignment arrived this month and will be ready for reshipment about March 1. Look up their ad in this issue.

Find the Drone.

There is no money in drones and maybe your flock contains a dozen or more. Get rid of them; they are costing you time and money and give you nothing in return. It is a simple matter to find them and it costs you but a small amount; it's an article that has been used and proved a grand success. It never fails to work and never gets out of order, the Economy Trap Nest. This is just one of the many poultry appliances manufactured by Niemann Bros. Mfg. Company. Their Model (all metal) Brood Coop made so that no rat or weasel can gnaw through, light and sanitary; it is impossible for it to harbor lice or infectious diseases; easy to take apart and put away until the next breeding season; a coop that will more than pay for itself the first season. Ask any exhibitor who has used the Model Exhibition and Training Coop, he will tell you that it is in a class by itself, the one best coop on the market; made of galvanized iron, sanitary and has a great number of special features that no other coop on the market has. Their catalog tells you how to do away with dirty, unsightly back yards caused from your chickens. Tear down that eye-sore, board henhouse and high fence that you have on your back lot. With the Portable Hennery you have a neat, attractive home for your chickens; a place for them to scratch and live in contentment, yet does away with all the dirty features. It is made of galvanized iron or you can have the wood with galvanized iron roof, nothing to get out of order; keeps your chickens cool in summer and warm in winter. This is just a few of the many poultry appliances that this firm are the manufacturers of, some of which are fireless brooders, setting coops, colony coops, runways, leg bands, portable fences and gates, in fact, their line of supplies is complete. Write and get their big illustrated catalog. Address Niemann Bros. Mfg. Co., Box 677, Mt. Olive, Ill.

The Ideal Chick Hover.

On one of my recent trips I called on the New Carlisle Mfg. Co., at New Carlisle, O. I found that they had something new—the Ideal Hover. From my viewpoint I think it comes the nearest to natural conditions of any artificial device ever put before the public. This hover can be set anywhere in any room. There are no holes to cut or false floors to build. One special feature that will meet with public approval is the handle. It can be picked up, lamp and all, and carried around like a pail. Can be used in colony, brooder or laying houses, or in any place in the barn or dwelling. Just light the lamp and fifteen minutes later it is ready to receive the chicks. One of the many who are using Ideal Hovers is the Ohio State Hospital for Insane, who purchased 17 of them and testify that they are giving absolute satisfaction.

Look into this hover; have them mail you catalog and list of the satisfied people who know they are Ideal. Address New Carlisle Mfg. Co., New Carlisle, O.—H. H. Coburn.

"A Paying Proposition."

You are always interested in a paying proposition. If you are a farmer or a poultry raiser, your poultry and eggs are the best paying proposition that you have on your farm or place for the amount of energy expended, provided that you properly feed, house and care for the hens. They must be properly fed, housed and cared for, and experience intelligently applied teaches you the best results. One of the very necessary adjuncts to your feed is Crys-co Grit, and experience will teach you never to be without it.

Now what is Crys-co? It is the crystallized or petrified shell formation—in plain words, petrified seashells turned into stone, guaranteed to contain 99 per cent pure carbonate of lime. Silica is contained in the formation, which is a natural glass, improving the plumage of your birds. Being hard, sharp and cubical, it saves the buying of separate grit; you therefore have a perfect grit and shell combination which will give you greater egg production without extra cost. Ask your dealer or write for booklet. See ad elsewhere in this journal. W. A. Neusitz & Co., St. Louis.

It's Great.

But if we were allowed to lapse into that slang expression that is heard on the streets every day we would say, "It's a bear." They tell us that this expression means "wonderful and beautiful." Well, that sums up the 1914 Fashion Plate Book of Buff Orpingtons, published by A. E. Martz & Son. From front cover to the last page it held the writer's attention like one of the six best sellers. It opens with a greeting that reminds you of the opening chapters of one of the great Elbert Hubbard's best books, then comes the announcement and for real live, snappy poultry news can not be beat. It tells you why and how Martz Orpingtons have become known as "the fashion-plate birds," giving their history from the egg until the time they become producers. It is illustrated throughout, showing their electric-lighted brooder house, which is also heated by hot water; it shows the interior of the conditioning houses, the mating houses and various views of this wonderful farm and buildings. Many pictures of their best birds are shown, together with a beautiful four-colored, two-page illustration of two of these beautiful Buff Orpingtons, painted by the well known poultry artist, L. A. Stahmer—in fact, it is complete in every detail. If you are in the market for birds or eggs, you owe it to yourself to send and get a copy of this catalog and price list. Address A. E. Martz & Son, Arcadia, Ind.

BUFF AND WHITE ORPINGTONS

THE ELMWOOD STRAIN

THE STRAIN OF LEAST RESISTENCE

BUFF ORPINGTONS. Cockerels that are blocky, broad, deep and massive, full of vigor, strong in under-color, strong in head points and type, and a rich, even, lustrous shade of buff, as soft as moonlight. Won more points at the New York State Fair than any other exhibition. Almost a clean sweep at Albany. They always win. It's in their breeding.

WHITE ORPINGTONS. Some very high-class cockerels to spare. I know we've got what you want I know, too, you can pay more elsewhere than I ask, but you can't get better blood lines, or quality. Book your order early for eggs at 50c each. A few baby chicks also. I guarantee to please.

SILVER WYANDOTTES

THE BEAUTY & UTILITY BREED
THE BEST WINTER LAYERS
STOCK FOR SALE AT ALL TIMES
NO EGGS NOR BABY CHICKS

A. E. TARBOX, BOX A, YORKVILLE, ILL.

They are going fast—our utility Silver Wyandottes. Only a few females left below $4.00 each, but we have about 50 utility Cockerels at from $2.00 to $4.00 each. If you want some, let us have your order soon; they will help the laying quality in your flock. We have a fine lot of choice breeders and exhibition birds yet in Cocks, Cockerels, Hens and Pullets at prices that are right. Let us supply your wants.

SILVER CAMPINES We have about 125 Cockerels and Pullets to spare in pairs, trios or pen of 1 male and 4 females. They are a fine lot and will please you. Send for Wyandotte catalogue or write your wants. No Campine catalogue, but will be glad to quote prices.

White Rocks and Silver Campines

My White Rocks are Winners at such shows as Quincy, Ill., Illinois State Fair and Illinois State Show, Springfield, Ill., 1912-1913.

I have been pedigree breeding this variety 10 years for heavy egg-production and standard excellence, and can supply winners for any show.

My Silver Campines are the Best Obtainable

My 1914 matings are each headed by a son of a winner at the 1912 Crystal Palace Show, England (the world's greatest show), mated to winning females.

A few fine White Rocks for sale. Eggs from special pens of either variety $5.00 per 15, $9.00 per 30. Circular free.

CHAS. A. SIMMONDS : CAMP POINT, ILLINOIS

Reaping His Reward.

Starting out to place the quality of his birds head and shoulders above any and all breeders, and in that way reap the reward that always comes after years of hard labor, E. B. Thompson is gaining his goal. If you will look up the Madison Square Garden winners for Barred Plymouth Rocks in the past three years, including the recent show, you will find his champion male has taken first and second pens at each and every show. Truly this is a wonderful showing and deserving of especial mention. The records show that in the past three years he has won nearly as many blue ribbons as any breeder in America has ever won in the entire history of Madison Square Garden. To make this record more phenomenal and unparalleled, this year he took first, second, third, fourth and fifth prizes for cockerels; this was all of the cockerel ribbons there were. The following gives his entire list of winnings for the Madison Square show, a record of three times as many first prizes as any other Barred Rock exhibitor, and more first, regular and special prizes than any other exhibitor of any breed. Here they are; isn't it a grand record? First and fourth cocks, first, second and fourth exhibition pens, the Imperial prize of the show, Sweepstakes Special for champion male, medallion for champion cockerel, diploma presented by American Poultry Association for best cockerel, special for best shaped male, special for best colored male, silver cup for best Plymouth Rock hatched in 1913, male or female, any variety, specials presented by the president of the American Barred Rock Club for best cockerel and best pullet. Three best cockerels, best display and best collection, silver cup presented by the New York Sun for best cock, hen, cockerel, pullet and pen, the association's $25 in gold for best display, and the Sweepstakes silver cup for best exhibition pen. Never in the history of the poultry business have you ever heard of such a record, and if you are in the market for prize winning stock this is your opportunity. Just write to the originator and breeder of this famous strain of "Ringlet" Barred Plymouth Rocks. Address E. B. Thompson, Lock Box 510, Amenia, N. Y.

100 Years In Business.

There are but few concerns in this country that can boast of being a century old. When a business does survive that long it is a pretty good sign that it is built upon the right principles and is conducted in the best interests of its customers. The celebration of its one hundredth anniversary in business is an event of which the George P. Pilling & Son Company of Philadelphia are deservedly proud this year.

These folks started the manufacture of Pilling surgical instruments in 1814, and although they had but one expert workman, they turned out nothing but the highest grade of instruments, which were soon popular because of their accuracy, fine materials and careful construction. They soon added the manufacture of Pilling "easy to use" horse, cattle and poultry instruments, which are considered the standard by veterinarians, stockmen, dairymen and poultrymen.

From the small beginning in 1814, the Pilling folks have grown to be the largest makers of special horse, cattle and poultry instruments in the world. Their plant now covers over 60,000 square feet of floor space and they keep over 100 expert workmen employed full time all the year round. Their factory is equipped with the most modern machinery and is a model of neatness.

This growth and record during the past hundred years is indeed one of which the George P. Pilling & Son Company may well be proud. To survive the wars, panic, and strenuous competition of the nineteenth century and come out with a clean name is almost without parallel in this country.

No Wonder They Look Happy.

Congratulations are pouring in on Bird Bros., of Meyersdale, Pa., on account of their recent great winnings at Chicago Coliseum and Madison Square Garden, New York. At Chicago, showing their Partridge Plymouth Rocks in a class of about 100 entries, they won a great majority of the ribbons. The list included first, second, third, fourth and fifth cock; first, second and fifth hen; first, second and third cockerel; first, second, third, fourth and fifth pullet and first old and first young pen. Is it any wonder they were happy? Not content with taking eighteen ribbons at Chicago, they left their Partridge Rocks at home, packed bag and baggage, and took their famous Bronze turkeys to New York. Again we hear from them in the list of ribbon winners; this time Madison Square Garden gave their Bronze turkeys first, second, third, fourth and fifth cockerel; first, second, third and fifth pullet, and first, third, and fifth hen. Some record, say we—twelve of the seventeen prizes. They have real cause for looking happy. It was a great record and one they can justly be proud of. Be sure to read their advertisement in this issue and write to them for prices.

Good Rule to Go By.

While making Illinois recently it was the pleasure of one of our representatives to call at the High Street Poultry Farm, located at Carrollton, Ill. Here he found a small, yet a most modern plant, equipped in every way with everything necessary to the successful production of poultry and eggs of the highest order. The owner, Mr. Myers, breeds Single Comb White Leghorns exclusively. They are of the D. W. Young strain, and bred for heavy laying qualities. We asked him to what he attributed his success. His reply was in two words, I "guarantee satisfaction." "Every bird and every egg that leaves this farm travels under a guarantee of money, refunded if not satisfactory; that is why I am kept busy filling orders." Mr. Myers has a good farm, some high class prize winning birds and he is a good man to deal with. Write and get his prices. Address Chas. Myers, Carrollton, Ill.

Eggs In Abundance—All Winter!

The weather is colder. Your hens are eating their heads off. You're lucky if you get one egg per hen a week. You can't stand this state of affairs—you must remedy it. If you don't your hens will cost you money instead of bringing in big profits.

There's no earthly reason why they should not earn you big money, if you go at it right. The feed is the whole secret. What's the best feed? Why, fresh cut bone! Your hens will simply have to lay if you feed them this.

What's the cost? Why, it's the cheapest feed you could buy. A piece of raw bone the size of a turnip will feed 10 to 20 hens. Cost to you, at the most, 2 or 3 cents—in many cases, nothing.

How can I prepare the bone? The Humphrey Green Bone Cutter is the one best thing. We've tested it and found that it beats all.

How can I get it? Write the makers, Humphrey & Sons, White St. Factory, Joliet, Illinois. They publish a free book, "The Golden Egg," brimful of valuable, practical information of vital interest to every poultryman. Tells you all about right feeding—how to make your hens deliver the goods—how to feed hens for profit, not loss. It would pay every poultryman to write them at once.

How You Lose By Saving.

You lose at least $3.00 in egg production every time you try to set a dozen hens instead of hatching those eggs in an incubator. The average hen under ordinarily good management should produce 15 eggs in the 21 days of the hatching period. Thus, 12 hens should produce 180 eggs, which, at 20c a dozen, are worth $3.00. The hens will not lay while they are setting, of course, and yet the egg production is one of the most profitable divisions of poultry raising. The hens will have to run around and mother their chickens for a month more, which would run the cost even higher than $3.00 when eggs are priced at the very conservative estimate of 20c a dozen.

The above is one of the comparisons brought out by a writer in a booklet—"Turning Eggs Into Chickens Into Dollars"—issued by the Rayo Incubator Co., 1012 So. 13th St., Omaha, Nebr. This booklet also tells how the Rayo Incubators will do the same work as the 12 hens at a cost of one gallon of oil, and thus save that $3.00 worth of eggs. The booklet and sample of the only hatching chart in the world will be sent postpaid upon request to all who ask for it.

Winning With Buff Orpingtons.

F. A. Poertner of Berea, Ohio, showing his Wingold Buff Orpingtons at the recent Buffalo show, captured second, third and fourth cock, first, second and third hen, first, second and fourth cockerel, first, second and third pullet, first and second pen, cup for best display of Buff Orpingtons, cup for most points on pens in English class, and cash special for best display in English class. Making only two entries in Buff Wyandottes, he took first and second cock. A nice record this, and coming right on top of his Cleveland record, where he won first and four cock, first and third hen, second, third and fourth cockerel, first, second and fourth pullet, first and third old pen, second young pen, silver cup for best Buff Orpington display and cash special and silver trophy for best display of Orpingtons. Be sure to write him for his mating list. Address F. A. Poertner, Box A, Berea, Ohio.

Live Up to Your Word.

We have written article after article on the man who takes your order, accepts your money, and then fails to deliver the goods. Well, there are really not so many of them that fail altogether to fill your order, but there are a number of them who make you wait three weeks to two months and then often send you inferior stock, or at least not what they advertised.

When a man tells you to come to his farm and stay a week if you want to, inspect his methods from yard to nest, and if you see one single item that does not spell quality, he will pay all of your expenses, he surely must be breeding winning stock. Not content with this offer, he goes further and makes the astounding announcement that he is placing his advertising in the American Poultry Journal with one goal in view, "give my buyers what two-thirds of the breeders do not give, and that is, absolute satisfaction." How many of our readers belong to this class, and how many have and are going to get into this other class, "absolute satisfaction"? It is bound to bring unbounded success, and mark these words, this advertiser, L. W. Maxson, originator and breeder of Eastern Star strain S. C. Rhode Island Reds, will be heard from in the form of not being able to handle his rush of orders. Just look up his advertisement in this issue, then write him. The address is Scranton, Pa.

A Most Enviable Record.

The largest and finest class of S. C. Rhode Island Reds that have ever been shown to the public at a national show were seen at the Chicago Coliseum. Among the many exhibitors was the well-known breeder, F. E. Harrison. Funny thing about Mr. Harrison. Whenever he leaves home to show in Chicago the townspeople all come to the depot to bid him good-bye. As the train pulls out they all holler, "Be sure to bring some blue ribbons back!" Well, Fred always remembers, as is evidenced by him taking 1st and 4th cock, 2d and 5th hen, 1st and 5th cockerel, 1st, 2d, 3d and 4th pullet, 1st and 3d old pen, 1st and 5th young pen, special prize for best display, special for best colored male, special for best shaped male, special for best colored pen, special for best shaped female, special for best colored female and the Western championship cup for best display given by the Red Club of America. Some record say we. No wonder the people of Menominee look forward to his homecoming, waiting to see

his long list of prizes. If you write Mr. Harrison at Box 30, Menominee, Mich., he will tell you all about his prize cockerel, the bird that won first prize and championship in a class of 106 cockerels. He tells you how he raised that bird from an egg to a blue ribbon winner.

———o———

Early Hatches Most Profitable.

A great many people don't like to trust their luck by setting incubators in the winter months, such as February. Doubtless everyone who has followed poultry raising closely who has studied conditions carefully will certainly admit that early hatches when at all successful are the most profitable. It stands to reason that the pullets that are hatched early will begin to lay in the Fall, and the early cockerels will bring the best price in the spring for broilers, but no doubt this fear regarding very early hatches is based on a good deal of disappointing experience which people have suffered in the way of being unable to keep the proper temperature in the machine during the real cold spells. There is too much advantage, however, in the early hatches to let one unfavorable experience guide one in future seasons. It is simply a question of getting the right incubator. For something over fifteen years I have preached early hatching and the tremendous advantages over the waiting for the weather to moderate to set out the incubator. In my judgment the incubator that cannot hatch chicks when chicks are most wanted and most profitable should not be trusted with eggs at any time. The early hatched pullet is the one who comes to maturity in the Fall before the cold weather and begins to lay and make money for you, and the cockerels that have been hatched early gain flesh early in the Spring before the market is well supplied, thereby allowing you a ready sale. We have built our incubator, THE OLD TRUSTY, of such material and so substantially and with cement walls and a big enough heating system to enable the operator to keep the temperature at the right degree in any weather without the use of much oil. If you are going to raise chickens get all there is out of it, and this can only be done by raising chicks right straight through the cold weather. We have always handled the chicken and incubator business on the basis that it is a straight dollars and cents proposition to all of us, and the lowest price that a machine can be built for to work and give results is the right price to get and to pay. We have put every dollar into this machine that is necessary to get the actual hatching results. It is hard to talk along these lines in the limited space, but if you will write me I will be glad to send you a copy of my 1914 Old Trusty Book. It is a catalog giving the experience of the Johnson family in poultry raising and incubator and brooder making. Address H. H. Johnson, Clay Center, Neb.

———o———

A Wonderful Farm.

Up at Orchard Lake, Mich., you will find without question the finest poultry farm in the country. Nature did much for this farm and what she forgot was made up through the artistic taste of the owner, Mr. Flanders. The buildings themselves mean a good sized fortune, not to count the beautiful home of Mr. Flanders and the very attractive bungalow of the manager, Mr. Parmenter. The farm consists of some twelve hundred acres located in the most picturesque part of the state, where lakes abound and nature seems to have outdone herself. It is about eight miles from Pontiac and about three miles from the Orchard Lake station of the Grand Trunk railroad. But to those who wish to visit this beautiful farm, we suggest that you take the electric car at Detroit or Pontiac, get off at Polish Seminary and telephone to the farm, they will immediately send an automobile to meet you. All of the poultry buildings are across the lake from the residence, and sixteen acres of apple orchard is given over to a range for brooders, chicks and colony houses. The Candee system incubators and brooders are used, the capacity being eighteen thousand, and there are two double brooder houses fitted with ninety-six hovers. No expense has been spared to make this farm the finest and best arranged poultry farm in the country; it must be seen to be fully appreciated. Although a man of Mr. Flanders' wealth can pursue any pleasure under the sun, his Single Comb White Leghorns are his delight and he spends all of his spare time among them. When Mr. Flanders first started he was fortunate enough to secure the entire stock of that well known breeder, Robert D. Parmenter, including all the famous winners, and along with that, the expert services of Mr. Parmenter himself. Among the breeding pens of this great farm you will find the first Chicago hen of 1912, first cock, Indianapolis, 1912; second cock, Chicago, 1911; Bob the First, the foundation sire of the Flanders-Parmenter strain, valued at a thousand dollars and who scored ninety-five and a half points at the age of five years and as young now as he was four years ago. Then there is second cockerel, Chicago, 1912; Perfection, first prize pen cockerel, Illinois State Fair, 1911; Dorothy, first hen, Chicago, 1908, valued at five hundred dollars, and many others. The grand clean up at the late Chicago Coliseum was a record breaker, first, third, fourth and fifth cock, first and third hen, 1st, third and fourth cockerel, first old and first young pen, special for best shaped male, special for best color male, $50 cup for best display, $10 gold special for best display, Swiss gold watch for best exhibit and sweepstakes. You will make no mistake by introducing the Flanders strain into your flock; you will find them layers of big white eggs. Referring again to the buildings, while I was there they were building a large cockerel house, which is now completed; the capacity is five hundred. There are also one hundred and twenty colony houses, each one holding a hundred chicks. They are mating fifty pens for the season's trade, each pen being headed by high class prize winners. Look up the page advertisement of Flanders' S. C. White Leghorns and write for price list. Address Flanders' Leghorn Farm, Orchard Lake, Michigan.—H. H. Coburn.

At Alton, Ill.
1st cockerel; 1st pen; 2nd and 3rd cock; 2nd and 3rd hen. **Champion Male.**

Mary Elizabeth Poultry Farm, -:- Monticello, Ill.

Longfield Poultry Farm.

Just outside of Bluffton, Ind., is the home of Longfield Poultry Farm, which is owned by D. K. Williamson. It contains about seventy-five acres, all of which is devoted to the raising of Rose Comb Rhode Island Reds. It is now eleven years since Mr. Williamson started to raising these birds and today he stands as one of the oldest Red breeders in the country. His breeding pens are composed of the very darkest reds to be found anywhere, and have always been great winners. His greatest winning was the big Chicago show of 1911, when in a class of four hundred and thirty-one Reds he captured four first prizes. In the past seven years the Longfield Reds have captured close to four hundred regular and special prizes, to say nothing of customers' winnings. Mr. Williamson is very careful about having everything just right; he ships nothing but strictly fresh eggs and guarantees them. He packs them in patent egg boxes and the boxes are repacked in baskets. He will treat you right and he certainly has the goods. Write to him for prices. His address is D. K. Williamson, Bluffton, Ind.—H. H. Coburn.

43 Prizes.

Winning forty-three prizes at some of the best shows in the country is the season's record of Mrs. Reginald Stonestreet, of Nashville, Tenn. With her S. C. White Orpingtons she took prizes at Indianapolis, Cincinnati, Washington, Nashville, Memphis and Little Rock, and the list of prizes included fourteen blue ribbons, twelve specials and six silver cups. With this great record she is flooded with egg orders, but can still handle a few more, as 65 per cent of her pens are laying. She is equipped for a large brood of chicks, but only expects to raise about one thousand, preferring this small number so as to give them more attention and make them blue ribbon winners. If you want baby chicks be sure to place your orders early. She will be pleased to quote you prices. Address Mrs. Reginald Stonestreet, Nashville, Tenn.

A Buff Orpington Specialty Farm.

About twenty-six miles from New York City, out at South Plainfield, N. J., is located one of the best specialty poultry farms in the country.

This great breeding establishment, the Sunswick Poultry Farm, has specialized on Buff Orpingtons for years, and Rufus Delafield, the owner, has a string of winnings captured at the big shows of which any breeder has just cause to be proud.

At Sunswick Poultry Farm they are color specialists and have devoted their entire time to perfecting this one breed—S. C. Buff Orpingtons. Their birds are marked by fine individual characteristics which have been handed down from one generation to another by most careful selection and line-breeding. The color of Sunswick Farm Orpingtons is simply wonderful, the soft, even shade of buff being the rule throughout their entire flock.

At Sunswick Poultry Farm they have increased their facilities and equipment since last season and are in fine shape to ship promptly all orders of eggs for hatching, day-old chicks and breeding stock. They issue a beautiful catalog and have also just published their 1914 mating list, which will be mailed free to anyone interested in poultry, either for exhibition purposes or for table and egg fowls. Sunswick Farm Orpingtons are large in size and their flesh is delicious. They are exceptionally heavy layers and of quiet dispositions, making an ideal general purpose fowl.

Quality Stock.

Breeding to produce the right type, color and size, so that they would be declared winners wherever shown, P. J. Olle of Racine, Wis., has won success with his White and Partridge Plymouth Rocks. At the Chicago Jan., 1914, show his White Rocks won first, second, third and fifth cockerel, first and fifth hen, first, third and cocks, second cockerel, first and fifth hen, first, third and fifth pullet and silver cup for best display. He also exhibited his Partridge Rocks, winning first and second cock, first and second cockerel, first and second hen, first, second and third pullet, first and second pen and silver cup for best display. He makes a specialty of supplying show and breeding birds, so write for his price list. Address P. J. Olle, R. 4, Box 111A, Racine, Wis.

Payne Bros.

One of the oldest and best breeder firms in the country, they have been raising Rose Comb Rhode Island Reds exclusively for so many years that almost everyone in the country knows their variety. Yet we in our last issue made the error of Single Comb Reds in their advertisement. They raise nothing but Rose Comb Rhode Island Reds, devoting their entire time and attention to doing but one thing, and that is breeding high-class birds. At the recent meet of the Rhode Island Red Club of America, held at New Haven, Conn., they won first and second hen, second and seventh cocks, fourth and sixth pullets, fifth cockerel, second, fourth, fifth and seventh pen and the state cup of the Rhode Island Red Club. They have a new catalog just off the press; write for it. Address Payne Bros., Box J, Portland, Conn.

Live and Let Live Prices.

Well, that is a mighty good slogan. It should and no doubt will bring many new customers and retain the old ones. This is the rule, together with a guarantee of safe delivery on all "day-old chicks" that Mrs. Alice M. Rawson, the well-known breeder of Big Rock, Ill., has adopted. In this issue you will find Mrs. Rawson's ad calling attention to her Silver Campine cockerel, which won second prize at the Chicago Coliseum Show, besides the Chicago ribbons. Mrs. Rawson recently won 2nd pullet, 2nd cock, 2nd and 3rd hen and 3rd pen at the Aurora, Ill., show. Mrs. Rawson guarantees a square deal to every one, no matter if you buy breeding stock, eggs or day-old chicks. Be sure to write to her for prices.

FIVE FULL SIZE PACKAGES, marvelous and striking varieties. Gigantic in size, richest and unique colors.

PANSIES

SEND 10 CENTS to help pay postage and packing and receive this big Introductory Collection of Pansies; guaranteed to please, and our handsome Seed and Plant guide. GREAT NORTHERN SEED CO., 2303 Rose St., Rockford, Illinois

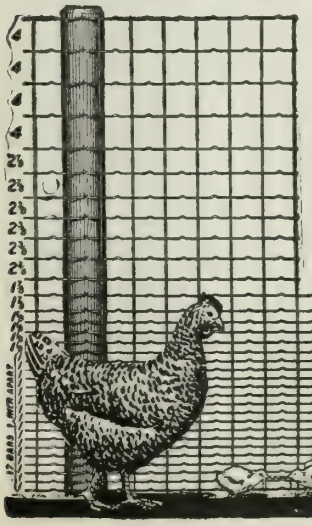
Chamberlain's Setting Hen

$5.75 Incubator and Brooder — Freight Paid East Rocky Mountains — Holds 26 Eggs — A Complete Incubator — Easy to Operate — You can always get fresh eggs enough to fill it.

The Baby Incubator

$5.75 Incubator and Brooder — Equals Two Hens. Always Ready to Set — Never leaves her nest. No Lice. No broken eggs.

Chamberlain's Perfect Chick Feed



Has no Equal. No Corn. No Bowel Trouble. The Only Original Dry Chick Feed and the World's Standard.

"Lady Showyou," winner of the National Egg laying Contest at Mountain Grove, Mo., with a record of 82 eggs in 82 days, and 281 in a year and recently sold for $800, was raised on Chamberlain's Perfect Chick Feed.

We have agents all over the U. S., but if our agent is not near you we will deliver 100 lb. sack freight paid to your railroad station for $3

W. F. Chamberlain Feed & Incubator Co.
107-109 Olive St. Desk 5 St Louis, Mo.

"PITTSBURGH PERFECT" Chicken & Rabbit Fence

Note the close spacing of the line wires. This is the one style of fencing that actually keeps your smallest chickens within bounds, and affords them absolute protection from prowling, destructive animals.

Made of large, special-formula Open Hearth wire, thoroughly galvanized with pure zinc, and

WELDED BY ELECTRICITY

wherever one wire comes in contact with another. Inseparable joints are thus formed, making a rigid, *one-piece fabric*, requiring fewer posts. Easily erected. No top and bottom boards necessary. Outlasts other chicken fences by *years*. Because of its great strength, utility and durable effectiveness, it is at once the cheapest and best chicken fence you can buy.

EVERY ROD GUARANTEED

Write for new catalogue describing this and other styles made for every FIELD, FARM, RANCH, LAWN and POULTRY and GARDEN purpose. **SOLD BY DEALERS EVERYWHERE.**

PITTSBURGH STEEL CO., PITTSBURGH, PA.

Makers of "PITTSBURGH PERFECT" Brands of Barbed Wire; Smooth Wire; Hard Spring Coil Wire; Twisted Cable Wire; Telephone Wire; Bale Ties; Fence Staples; Poultry Netting Staples; Regular and Galvanized Wire Nails; Large Head Roofing Nails; "PITTSBURGH PERFECT" Fencing.

A Nice Piece of Work.

We are in receipt of a handsome catalog from the Aldrich Poultry Farms, which gives their mating list for 1914. A well-gotten-up book, neat in appearance from the front cover to the back page. Gives their list of winners and tells you just what you get when you order from them. It was the Aldrich White Orpingtons that won thirteen prizes and the special for best display at the recent Madison Square Garden show—a wonderful record, when you consider that they only entered seventeen birds. Their prices are reasonable—you know what the Aldrich strain is—so it will pay you to write for this mating list. Address Aldrich Poultry Farm, Columbus, Ohio.

A Visit to a Certain Mr. Oakes.

J. WILLARD BOLTE.

Down in Tipton, Ind., lives a man named Oakes, who has had more to do with the success of artificial incubating and brooding than any other man now active in business, yet you never heard of the Oakes Incubator or Brooder, did you? Neither did he, for he never sold one. But he has made the heating and regulating devices for something like half of all the incubators that have ever been sold. He has seen the rise of the poultry business, and says no man will see it fall. When his company was formed 21 years ago the machines of today were not even dreams, and the Oakes Mfg. Co. has outlived the business life of every incubator manufacturer then in business save Geo. Stahl. The reason for Oakes' 21 years of steady and increasing business is the fact that he makes the best goods that can be made. The corrugated wafer heat regulator was invented by him and is now used on dozens of different kinds of machines. His safety lamp burners are the only ones that absolutely stop the gas from forcing back into the tank of the lamp. A large factory turning out the very best in the way of incubators and brooders, we sugest that you learn more about the great Oakes line of poultry house equipment. Send for a free copy of Mr. Oakes' book; it is interesting and will save you money. His address is L. R. Oakes, care of Oakes Mfg. Co., Tipton, Ind.

Fertile Eggs.

More than two-thirds of your hatching success depends upon the fertility of the eggs you buy. To have the greatest amount of success you must select eggs from birds specially bred for generations. In that state where they must be shown, "Missouri," there is a little city called Pacific. That is the home of the Yesterlaid egg, where there is a great big farm devoted exclusively to the raising of Yesterlaid Range Raised Laying Leghorns. These birds have been bred to become heavy winter layers, and they lay eggs that are 95 per cent fertile. They are large, dead-white, and uniform in size, caused by the careful method of selecting, mating and feeding. Chicks hatch from Yesterlaid eggs like popping corn, and their statement of 95 per cent fertility is borne out by the statements of thousands of their regular customers, including seventeen experiment stations. Some of the greatest prize winning birds in the country came from Yesterlaid eggs. Get the correct results—use good eggs. Write for their prices today. Address Yesterlaid Egg Company, Dept. 5, Pacific, Mo.

The Oldest Flock In America.

That is what J. Quincy Dawson of Coshocton, Ohio, has in his S. C. Buff Leghorns. He has been breeding them for twenty-three years, so the quality must be right. For nine years he has been breeding the same strain of Columbian Rocks. His ad appears in this issue; read it, then write him for prices. Address J. Quincy Dawson, Dept. A, Coshocton, Ohio.

Breeding Buffs.

Devoting his time and attention to the raising of Single Comb Buff Leghorns, Mr. F. S. Smith, of Hamilton, Ohio, can point with pride to being the largest exclusive breeder of Buffs in the world. He had winners at thirteen of the biggest shows, and if in the market for grand layers or show birds, be sure to write him for his catalog. The prices will interest you. Address F. S. Smith, Box C & D, Hamilton, O.

First White Rock Hen Madison Sq. Garden--Jan. 1913

The Big Prize at the Garden in White Rocks is 1st Cockerel

RANCOCAS POULTRY FARMS won this prize. In fact, we have not been beaten on cockerels this season, winning first and second cockerels at New York State Fair, first and second at New Jersey State Fair, first and second at Palace Show, New York City, and then the grand prize of the year—first cockerel at the Garden.

Our females also have won many prizes. Write for our complete winnings, prices of stock and hatching eggs.

RANCOCAS POULTRY FARMS

Box 512 **Browns Mills, N. J.**

Barred Plymouth Rocks

Winners at Chicago—Indianapolis—Memphis—Louisville—Shelbyville

Indiana State Fair, Indianapolis, Ind., September, 1912, 1st Pullet, 1st Pen, 2nd Cock, 3rd Cockerel, 3rd Cock, 3rd Pullet. **Tri-State Fair,** Memphis, Tenn., September, 1912, 1st Cockerel, 3rd Pullet, 5th Cockerel, 5th Pen. **Louisville Poultry Show,** Louisville, Ky., December, 1912, 3 Firsts, 2 Seconds, 4 Thirds, 1 Fourth, 2 Fifths. Special for the Best Shaped Female. Two Silver Cups for Best Barred Plymouth Rocks. **Shelbyville Fair,** Shelbyville, Ky., September, 1912, 1st Cockerel, 1st Pen, 2nd Pullet, 2nd Cock. **Chicago Poultry Show,** Chicago, Ill., December, 1912, 4th Pullet Bred Cockerel.

Get our wonderful list of winnings, proving the superiority of our Rocks.

COCKERELS—$3.50, $5.00, $7.50; PULLETS—$2.50, $3.00, $3.50

EXHIBITION BIRDS—$15.00, $20.00, $25.00

Eggs and baby chicks from best exhibition and breeding stock

We have on hand over 1900 early hatched stock, all raised

Direct from Our Premium and Pedigree Pens

bred to perfection in color and barring—and we can furnish you birds that you cannot get elsewhere at three or four times the price we ask.

We furnish, perhaps, *more winning exhibition birds to our customers* than any breeders in America. Our moderate, honest prices secure us all the business we can take care of, and our fine, large, magnificently barred birds, absolutely guaranteed, *carry off the blue for those who buy them.*

Send us your order for any exhibition or breeding birds you may need. We are old reliable breeders, *are Specialists in Barred Rocks,* have bred them successfully for 22 long years, and with our unequalled facilities for hatching and raising our birds WE ARE ENABLED TO GIVE YOU SELECTION NO SMALL BREEDER CAN POSSIBLY GIVE. You will make a great mistake if you place order before getting our prices and literature. Send for catalogue No. 3.

POPE & POPE **Box A** **Louisville, Kentucky**

A Chicago Winner, Dec. 1912

Some Winners.

We wish to call our readers' attention to the advertisement of George A. Kersten, who at the late Minneapolis show exhibited his Columbian Wyandottes in competition with the Chicago winners, taking three firsts, one second, one fourth, and one fifth. For the past three years he has been winning prizes at Chicago, Minneapolis and St. Paul shows. His prices are reasonable; write to him. Address, George A. Kersten, West 52d Street Station, Minneapolis, Minn.

Four Shows, Forty-Seven Prizes.

Going some, but that is the record of Mr. and Mrs. P. A. Demgar, of Brown Station, N. Y., for the season. Showing their S. C. White Orpingtons at New York State Fair, Jersey City and Albany, they have captured thirteen firsts, ten seconds, seven thirds six fourths, two fifths, eight specials and a silver cup. A very good showing and one that they can justly feel proud of. They are making special prices on some high class birds, as you will see by their ad in this issue. Be sure to write them. Address Box A, Brown Station, N. Y.

Twenty-Nine Out of Thirty.

That's the record of the prizes that Brinkley's White Rocks took at the Memphis, Tenn., show. They also took four of the five firsts at both Little Rock, Ark., and Jackson, Miss. A record to make you hold up your head, and that is what W. J. Brinkley, the owner, and J. H. Sledd, his superintendent, are doing. Brinkley's birds are called the "best in the South," and as this is egg buying season we suggest that you read their ad and then write them. Address W. J. Brinkley, Box A, Iuka, Miss.

Shipping Time For Day Old Chicks.

It is almost time for the shipping of day-old chicks—something that needs the utmost care, for your future orders depend upon you shipping them in the right kind of a box, so that they arrive at their destination alive and healthy. The Rippley Mfg. Co., of Grafton, Ill., make a specialty of day-old chick boxes, as well as egg boxes, and the thousands of satisfied customers that buy from them year after year is proof positive of their high-class goods.

Cole's Buff Rocks.

About fifteen years ago Frank Cole of Van Wert, Ohio, started to specialize in Buff Plymouth Rocks. Today he is one of the largest breeders in the country and his flock is noted for its uniform color. To fully appreciate this you must see his flocks at home, for some of his best birds never see the shows. Some of his winnings are from such shows as Missouri state, held in St. Louis; Springfield, Ill.; Chicago, Detroit and Cleveland. At the Cleveland show he won third cockerel and third, fourth and fifth cock, at Chicago Coliseum first and fourth cockerel, third hen, first pullet, first young pen, best display and the club's central district cup. His matings include all of these winners together with many others. See his ad in this issue and write for prices. —H. H. Coburn.

U. R. FISHEL'S AD in this issue will interest you. Read it.

C. J. FISK, Owner. W. D. CAMPBELL, Supt.

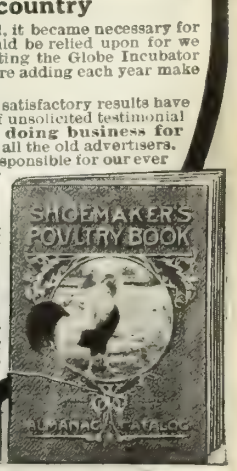
Poultrymen have confidence in the Globe Incubator because all the value—all the invested money—is put into the machine itself. Send 15c for our valuable descriptive book.

It Is Well Worth While to Consider "the Man Behind"

Before placing your order for an incubator or brooder, it will pay you to get acquainted with the manufacturer. Make sure that you can place your entire confidence in him and his machines. There are too many "dry goods boxes" with cheap tin heating arrangements sold now days for incubators and they are made by people who know very little about the chicken business, artificial incubation and its requirements. They are sold exclusively by "Hurrah advertising" and the manufacturer doesn't care if he ever hears from the customer again.

The Globe Incubators and Brooders

are the best machines on the market and we can prove it.



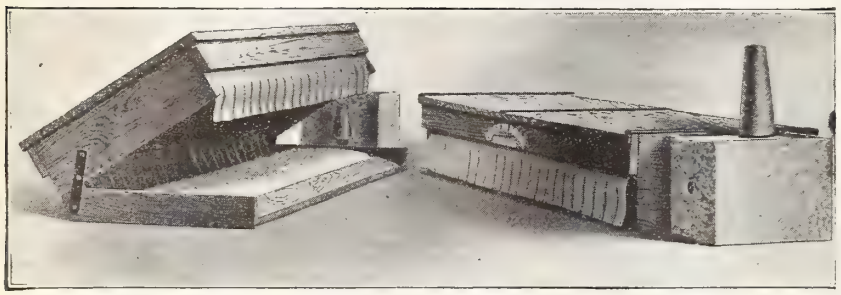
The most modern machinery and the most skillful workmen that can be found enter into the construction of the Globe Incubator and Brooder, and no machines leave the factory until they pass the most rigid examination, and the great hatches which our customers obtain are the results of our twenty-five years of experience in breeding thoroughbred poultry and making incubators and brooders.

We sell more thoroughbred chickens than any two of the leading advertisers in this country

In order to raise this great number of fowls which we annually sell, it became necessary for us to invent our own machine, one that would do the work and could be relied upon for we had tried all the leading machines manufactured before inventing the Globe Incubator and Brooder. The remarkable improvements which we are adding each year make the Globe the best artificial hatcher on the market today.

WE HAVE SOLD THOUSANDS OF THEM. Such satisfactory results have been obtained from our machines that we have thousands of unsolicited testimonial letters on file open for your inspection. **We have been doing business for over a quarter of a century** and have outlived nearly all the old advertisers.

Square dealing and satisfaction to the buyer have been responsible for our ever increasing trade. We want to tell you more about our great factory, our mammoth poultry plant, and our methods of doing business. We have just issued our annual poultry book and guide which has cost us thousands of dollars to produce. It is not a catalog exclusively, but as a text book on poultry breeding in all its branches it is superior to any book issued. It tells about our great poultry farm where we raise and handle thousands of high-grade birds that go to every part of the world each year. But come for yourself and see—we have the goods. Write to any bank or express company in Freeport and they will verify every statement which we have made here. Be sure and send for this book today. Send 15c to cover postage, etc., and if you think that the information on poultry keeping alone, in the book is not worth the money we will cheerfully refund it to you.



C. C. SHOEMAKER
FREEPORT Box 605 ILLINOIS

Don't Forget—The above is the only Incubator manufactured in Freeport, Ill. at the present time.

Close to Nature.

This is a picture of the Close-To-Nature Open Air Hover. It shows one side closed, the other open for cleaning out, airing, etc. A decided diversion from the usual run of hover, inasmuch as the heater by induction process warms one end as equally as the other; the hovers are long and narrow, which enables them to care for large flocks of chicks without them crowding; then the roosting bed, made of chaff or earth, is slightly elevated, making it sanitary. With this contact heat retainer and elevated roosting bed it is impossible for the chicks to crowd or pile

up. The warming process, caused by the chicks backing up against the felt bottom of the thermal chamber, gives them the same warmth as the mother hen herself. The ventilation is open, giving them fresh —not hot—air, and the hover, roosting bed and chicks can be easily removed. It combines the fireless with the lamp, for the lamp can be used for very young chicks and then removed as the chicks grow older. Full particulars may be had by writing the Close-To-Nature Co., 38 Front St., Colfax, Iowa.

—o—

There is an old saying and a true one, "The man who never makes a mistake never does anything." In our last issue we gave Frank E. Hering credit for first prize on Silver Campine cock at the recent Chicago Coliseum. This is not correct. First prize cock was won by C. H. Dickinson and immediately sold to Gensemer Bros. of Creston, Ohio. We hasten to correct this error and now give credit where it was intended.

—o—

Barker of Thorntown.

M. S. Barker of Thorntown, Ind., is an acknowledged authority on Black Langshans. These birds are one of the old pure blooded breeds; its type is firmly fixed by generations of good breeding preceding its introduction in England some forty-odd years ago. They are very vigorous and grand layers, especially in the winter, and Mr. Barker predicts a great future for this class of fowl. His birds have been heavy winners since 1905, and he exhibits at some of the best shows in the country. At Madison Square Garden, 1912-13, he took several firsts; at Indianapolis he always wins, and he always takes ribbons from Boston, Pittsburgh, New Orleans, Hagerstown, Cincinnati, Cleveland, Los Angeles, Spokane and Kansas City. At the Chicago (January, 1914) show his Langshans took first, second, third and fourth cock, first and fourth hen, first, second and fifth cockerel, and first and third pullet. Mr. Barker's matings are composed of such blue bloods as these, and this year's mating surpasses all others. If interested in the Majestic Black Langshans, write for Mr. Barker's catalog. Address M. S. Barker, Thornton, Ind.—H. H. Coburn.

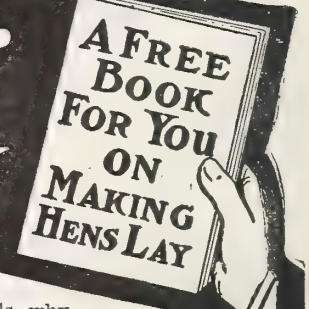
—o—

White Wyandottes.

One of America's largest White Wyandotte specialists is Sherman Bowden, of Mansfield, Ohio. His customers from coast to coast have been winning with these birds for years. They are the correct Wyandotte type—snow white, and the comb is the nearest to perfection of any birds I have ever seen. At the Cleveland, December, 1913, show, they won three of the possible five firsts, and at the Cleveland poultry breeders' state meet of 1914, with a class of sixteen breeders showing 109 birds they won first and second cock, first, second and third hen, second and third cockerel, first and second pullet, second pen and the club state championship cup. Mr. Bowden is putting out a handsome catalog, beautifully illustrated, giving description, prices and mating list. As I have handled his birds, I can recommend them.—H. H. Coburn.

—o—

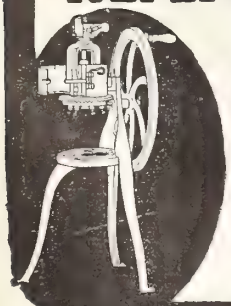
At Show Time.



It always happens that the big shows are held just about the time we are going to press. We always try to give our readers news while it is news, and in this way we often have to rush our copy and mistakes sometimes occur. In the advertisement of Rosemont Farm which appears in our January issue, we quoted Mr. Elmer V. Shultz, the owner, as having won second pen on Brown Leghorns at the State Brown Leghorn Club meeting, held in Chicago. This is not correct and we acknowledge the error as our fault. The Rosemont Farm made three entries and they captured second pullet bred pen.

CARVER'S TWO BIG RED FARMS. Rhode Island Reds and Red Sussex, the two varieties raised on separate farms. P.O. Seville, Ohio

CAUTION Any Bone Cutter claiming to be Mann's without F. W. Mann Co. cast on its surface, is an imitation. If made in Milford, Mass., it is Genuine.



Make Your Hens Lay

Write today for our free poultry books and learn at once what it might take you, alone, years of costly experience to find out. You know how eager fowls are for bugs and worms. Our book tells why. Briefly, it's the animal food they want, and **must have,** in order to thrive best. Chicks, laying hens, cocks, all need it—to develop frame, muscle, feathers, to produce many eggs, to produce fertile eggs. To replace bugs and worms in winter, or, for yarded fowls, feed freshly cut raw bone, prepared with

MANN'S LATEST MODEL BONE CUTTER

Try One Free—No Money Down

This feed is four times richer in protein (the egg-making, body-building element), than corn is, and it is more easily digested and assimilated. **Save** money by cutting down your grain ration. **Make** money by getting more eggs when eggs are worth most and by having better eggs for hatching stronger chicks, earlier and heavier broilers.

Mann's Latest Model Bone Cutter cuts the bone (and all adhering meat and gristle) into a fine, soft mash that fowls of all ages relish and can put to immediate use in producing profit for you. It turns easily, cuts rapidly, never clogs, wastes nothing. We sell it on **10 Days' Free Trial,** without money or deposit in advance—so you may be sure it is right. We even pay its freight back if you are not satisfied.

WRITE FOR FREE BOOKS TODAY. To read them is to know how to feed poultry for most profit.

F. W. Mann Company, Box 56, Milford, Mass.

Illinois State Poultry Show

[Continued from page 340]

head and eye; snow white plumage; an easy winner. Second, narrow head and comb; good body and breast; tail in bad condition; eye color good. Third, good; well rounded type, but under size; strong red eye and yellow legs.

Cockerels.—First, nearly perfect in type; well rounded breast and body; fine back and beautifully spread tail; well balanced on good short legs; color perfect; shape special and champion male. Second, well balanced, well finished; snowy white in plumage; losing in shape of breast and color of shanks. Third, fine type; bad comb, losing in color. Fourth and fifth were where they belonged.

Hens.—First, well balanced on good short shanks; fine head and comb; red eye; a little flat in back and narrow in tail; snowy white in plumage; champion female. Second, long in back, pinched in tail, coarse in head, and showing too much length of body. Third, fourth and fifth well placed.

Pullets.—First, a trifle narrow in saddle; well balanced on good legs; well rounded breast and body, showing graceful, well rounded curves; well spread tail carried at the proper angle; neat head and comb and good eye; shape special. Second, long in type; narrow back, and showing too much tail; winning the place on color; also won color special. Second, short, blocky type; good breast and body; too much cushion; pinched in tail; good head and comb. Fourth, good, well rounded type; well spread tail; bad comb and feet; lost on color of ear lobes. Fifth, placed where it belonged.

Buff Wyandottes.

First cock, a little long in back, body and legs; pinched in tail; good comb, head and eye; golden buff color throughout, with strong undercolor. Second, uneven color in hackle, back and wing-bows; well balanced body, good back; bad legs and feet. Third and fourth were well placed.

Cockerels.—First, very neat in type and finish; a trifle long in back and lacking in width of saddle; comb rather coarse; color golden buff in all sections; won shape and color and champion male. Second, a good, well balanced bird; unfinished; showing good color all through; head and comb rather coarse. Third, good type, well balanced on good legs; bad comb; losing badly in color of wing-bows and breast.

Hens.—First, nice, well rounded Wyandotte type; good comb and head; well balanced on short legs; even color all through. Second, long in back; pinched in tail; good short shanks; neat head and eye. Third, good type, well balanced, well rounded; too strong in color.

Pullets.—First, very good in type; neat head and comb; even golden buff color, with strong undercolor; was shape, color and champion female. Second, well balanced, well rounded; good head, comb and eye; tail well spread, losing on surface color. Third, a beautiful golden buff in all sections, showing great promise, but losing on maturity. Fourth and fifth in the right place.

Partridge Wyandottes.

Cocks.—First, a grand bird; well balanced on perfect legs and feet; great depth and breadth of body and breast, with perfect back and tail; showing beautifully rounded lines in all sections; nice head and comb; striping in hackle and saddle perfect; wing near perfection; one of the best Wyandottes ever exhibited; won shape, color and champion male. Second, long in back and body; good head points; hackle and saddle fairly good; lost in undercolor.

Hens.—First, a beauty; nicely rounded body, good head and tail; perfect ground color and well penciled throughout; color, shape and champion female. Second, good type and carriage, losing in penciling.

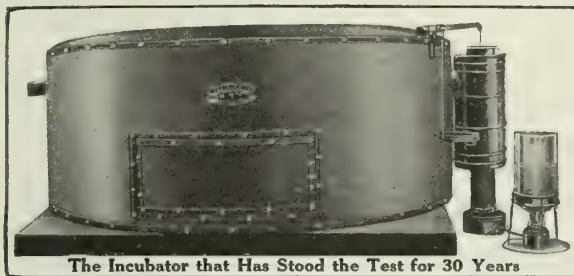
Pullets.—First, beautifully rounded; neat head and comb; good hackle, well penciled. Others well placed.

Silver Penciled Wyandottes.

First cock, a beauty; trifle coarse in head; well balanced; well rounded, showing beautiful striping in hackle and saddle. First hen, good type and well penciled.

Columbian Wyandottes.

Cocks.—First, a clean, well placed specimen; a little long in back and body; clean color all through. Second, strong in color; splendid hackle; losing in type. Third, fourth and 5th losing badly in shape and color to first and second.



Cockerels.—First, a beauty; perfect back and body; neat head and comb; hackle near perfection; strong wing and beautiful green tail; color special champion male. Second, too high on legs; flat back; long body; good in hackle and wing; winning on ma-

CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. **All copy for Classified Ads must reach us by the 17th of month preceding date of issue.**

E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

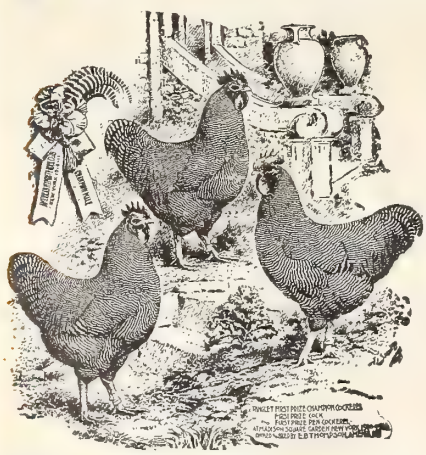
Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.

The Imperial prize of the show, Sweepstakes Special for Champion Male.



Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. See my ad. on page 294 for my remarkable record of one year ago at New York. These great twin records, two years in succession, spell **Imperial "Ringlet" Supremacy.**

GRAND BIRDS FOR SALE

EGGS from the finest exhibition matings in the world $10 per setting: four settings, $35; 100 eggs $60.

AMERICAN POULTRY JOURNAL

Sheppard's Anconas For Profit!

Poultrymen are of one opinion when it comes to the question of Poultry Profits. Almost without exception they will tell you **"the profit is in the eggs!"**

—and SHEPPARD'S famous "ANCONAS" have challenged the world for egg production.

G. W. Idle writes, "Pullets hatched from eggs purchased from you have laid an average of **256 eggs each** for entire flock for year."

"Going some"—but ANCONAS have the wonderful trapnested record of 270.

Don't that sound like **profits** to you?

They are beautiful fowls from a fancier's standpoint, and as a utility fowl the "ANCONAS" cannot be equalled.

You are in the Poultry business for all the **profit** there is in it, and no matter how you look at it, the "ANCONAS" lead.

They are hardy, prolific, not inclined to set, are the **greatest layers the world has known,** and they always present a clean, well groomed appearance.

Don't you think it would be a good idea to raise the most profitable fowls on the market?

ANCONA Pullets lay as early as 4½ months—they lay large white eggs—they require **less food, less floor space,** and are busy laying, when the heavy fowl is setting.

Wouldn't it be a good idea to have complete information on this profit making strain? Tear out the corner and mail it quick for your copy of my catalog and mating list.

H. Cecil Sheppard, Berea, Ohio.

I would like complete information on Sheppard's famous "ANCONAS" —the "World's Best."

Very truly,

Name_____

Address_____

H. Cecil Sheppard

Box M-2 - - Berea, Ohio

F. E. Harrison's Champion S. C. Rhode Island Reds

have for years demonstrated that they are the one strain that stands out ahead of all others.

At Chicago, 1913-1914, Royal Reds won in the largest class ever shown, forty-nine exhibitors showing a total of 270 birds, and in the largest class of Cockerels ever shown in America (106) as follows: 1st and 4th Cock; 2nd and 5th Hen; 1st and 5th Cockerel; 1st, 2nd, 3d and 4th Pullet; 1st and 3d Old Pen and 1st and 5th Young Pen; every color special; every shape special; every championship; elegant watch offered by the Association for the best display, and the Western Rhode Island Red Club of America Cup offered by the Club, both Rose and Single Combs competing.

Bred, Owned and Exhibited by F. E. Harrison

NOTE THIS: I am the only exhibitor that has won in all six classes in one showing. Twice have I accomplished this feat.

Twice have Royal Reds exhibited personally by me won 87 points on best display at the great Coliseum Show of Chicago. No other exhibitor has ever won this number of points before. Therefore, Royal Reds have the distinction of on two different occasions winning the greatest number of points ever given at Chicago.

More facts of this world's greatest show of Chicago are as follows: At Chicago I have won twice as many first prizes on Old Pens as all other exhibitors combined. Twice as many first prizes on young pens as any other competitor. Twice as many first prizes on cock birds as any competitor, and more points on cock birds at the last two shows than all other exhibitors combined.

I have won more places on Cockerels at Chicago the past four years than any other competitor, and hold the world's record for winning 1st Cockerel in the largest class ever shown in America.

VERY IMPORTANT: I have won more points on males (Cockerels and Cocks), on hens, pullets and pens, at the last two Chicago Shows than any other competitor. Therefore, Royal Reds outclass all others in winning the largest number on males, females and pens than any others.

NOTE THIS: I have won three times as many points on pullets at Chicago in the past two years than seventy-two competitors combined.

At Chicago, 1912-13, I won 1st, 3d and 4th Cock; 2nd and 3d Hen; 4th Cockerel; 1st, 2nd and 3d Pullet; 1st and 2nd Old Pen and 1st Young Pen.

To think of a world's record is to think of Royal Reds.

I have every first prize (eight in number) winning males from the last two Chicago Shows.

My egg offer is the best opportunity in all America to start in Single Comb Reds.

2,000 head of Cocks, Cockerels, Hens and Pullets, Trios and Pens for sale, rich in the blood of these Chicago winners.

Catalogue free, describing best pens ever put together.

F. E. Harrison

Box 30, Menominee, Michigan

Halbach's White Rocks

Never in the history of Poultry Exhibitions has any strain made such wonderful wins. They hold the world's record by capturing best **Display** at **Chicago** five times. At the

Great Mid-West Coliseum Show, Chicago, Illinois

America's Greatest Exhibition

in a class of 140 White Rocks—the best ever got together, they made the marvelous winning of

1-2-3-4 Cock (4 entered) **1-2-3 Old Pen (3 entered)** **1-2-4 Pullet (4 entered)**
1-2-3-4 Hen (4 entered) **1-2-3-4 Cockerel (4 entered)** **1-2-3 Young Pen (3 entered)**

45 out of 46 birds placed in winning. A grand total of 153 points out of a possible 157.
This is an astonishing win but not as astonishing as the undreamed of quality of the birds that made the winning. It was a revelation in perfection of type, pureness of plumage and was the wonderment of all.
Hundreds of show birds that will win, at $25 to $100 each. Breeding pens perfectly mated and from these winners, at $25 to $75.00. Get started with this quality. Utility females, $2.00 each. No matter what you want I have it. Send your order.

Place your order today for eggs from my unapproached matings, at $12.00 per setting. Utility eggs $10.00 per 100. Catalogue 10 cents. Mating list free. Mention American Poultry Journal.

MEAD CYCLE CO. Dept. G265 CHICAGO

World's Foremost White Wyandottes

REMEMBER—My White Wyandottes have been the most prominent winners in the leading shows for over 15 YEARS and many owe their success to my strain, while I have won many first and second prizes, cups and specials at New York, World's Fair and other shows, past year won the $25.00 cash special for best display, offered by the Massachusetts State Board of Agriculture.

One of my patrons has been a most noted winner at **Chicago** for three years, another the past three years won the lion's share at **Indianapolis** and **Pittsburg, Pa.**; another won more last year than all others and again this year made a big win against several noted breeders at **Dallas, Tex.**; one won three firsts and several other prizes at **Toronto, Ont.**, with birds bought from me; another won the $100 Challenge cup for best display, and at **Ottawa, Ont.**, my birds have been the most prominent winners many times. One patron writes, cockerel I sold **won 1st at Youngstown, Ohio, also A. P. A. medal for best male in show,** and did the same as cock; another writes, "the cockerel you sold me won 1st as cock at **Minnesota State Fair** and 1st cock at **Minneapolis** show." At **Detroit** my patrons have been the most prominent winners and at recent show winning more than all others combined. At **Baltimore, Washington, D. C.**, and many other shows my strain have been the prominent winners. Now, I have letters on file to prove these claims, and my circular will give names and dates in full. Send for it, **free.**

I will sell Eggs from a limited number of special matings at $5.00 per setting, 50 Eggs $15.00. All stock purchased can be returned at my expense if not satisfactory, conditions under which I have sold all my stock, and have shipped to all parts of the world.

J. H. JACKSON Lock Box 88 Hudson, Mass.

Two Headliners in the Poultry World

Tecktonius-Reed Strains

R. C. S. C. **BUFF LEGHORNS** S. C. **RHODE ISLAND REDS**

Now Under Same Management

The fame of "Tecktonius" Buffs—America's Champion exhibition and laying fowl—is world wide. Big exhibition prizes, everywhere, at their mercy—not once, but for 7 consecutive years. Their laying record, as well, is as long and brilliant, with 249½ average in 1912 Nat'l Laying Contest—one bird, 281 high. "Tecktonius" Buffs build "winning" reputations, and make "big money" for poultrymen. Put your trust in them and be a "winner" as a poultryman.

Take note of **Reed's S. C. R. I. Reds** the coming champions of 'Reddom'. This **unrivaled strain of Reds** is the outcome of 7 years efforts of B. C. Reed—one of the most—if not the most—scientific and successful breeding and mating expert this country has ever known. Mr. Tecktonius, recognizing Mr. Reed's extraordinary breeding ability and the almost **perfect strain of Reds he has** evolved, has enlisted Mr. Reed's cooperation and henceforth these 2 breeding geniuses will work hand in hand for the advancement of these two grand strains.

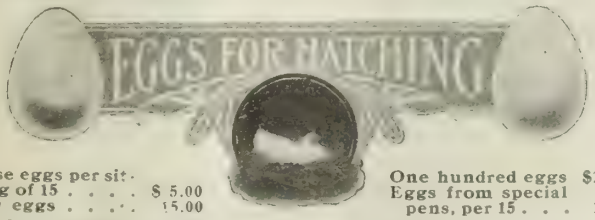
Some Unrivaled Tecktonius Strain Bargains

S. C. Matings—Pens 1 to 6 inclusive, one 15-egg setting, $10; two, $18, three, $25.
Random Selection—If selected from one pen in which price rules, $5 per setting, extra. Pens 7 to 10 inclusive, one setting, $5; two, $9; four, $15. Pens 11 to 14, inclusive, $2 per setting; $10 for one hundred.
R. C. Matings—Pens 15 and 16, one setting, $15; two, $25.
S. C. Utility Stock—Hens, $2; Cockerels, $3 and $5; trios and pens, $10 and $15.
Exhibition Stock—Hens, $5; Cockerels, $15 and $25; trios and pens, $25 to $50.

No Chicks of Either Variety For Sale. Mating List Free.

Special Introductory Offer—Reed's Strain S. C. R. I. Reds

We have mated 6 pens of these Royal Bred birds—the cream of 565—comprising 2 Cocks, 4 Cockerels, 20 Hens and 40 Pullets. Everyone is a marvel of breeding with exquisite, rich even Red Color, and with absolutely no contrast between hackle, back and sickle feathers. The tail and wing markings are as near perfection, as scientific breeding can make them. Both male and female types come up to standard requirements, and well over standard in breeding weight. From all pens above described we will sell eggs as follows: One 15-egg setting, $5; two, $9; four, $15; per one hundred, $25.



No Stock For Sale Until Fall. No Chicks For Sale.

BUFF ORPINGTONS
WHITE ORPINGTONS
WHITE PLYMOUTH ROCKS
WHITE WYANDOTTES and
S. C. RHODE ISLAND REDS

Several other **Firsts** went on birds of **Owen Farms' Strains.**

This wonderful percentage of **Firsts** at **America's Leading Shows** is merely a repetition of past years, and **Owen Farms' Records** at the shows where **real competition** is found stand alone and unequaled.

OUR CUSTOMERS ARE TODAY OUR LEADING COMPETITORS AND WE ARE GLAD TO SHARE THE HONORS WITH THEM

Every variety line bred for from nine to twenty years and no strains of recent origin can possibly have the producing value of the established flocks on Owen Farms. Weigh carefully every statement you read and comparison will show you the pre-eminence of my flocks.

You may win without these bloodlines, but you will find it practically impossible if your competitor meets you with Owen Farms Birds.

AS UTILITY BIRDS

These flocks each year have proven their exceptional merit. Wonderful reports of high average egg yields come in from customers. One customer has reported 262 eggs laid in 290 consecutive days by a pullet bought of us, and many other reports are almost as good.

My flocks have perfect health, size, bone, substance and bodies with tremendous egg capacity. **Treat them well and they will do the rest.**

1914 MATINGS

Of all varieties are the best ever made on Owen Farms. My customers for **eggs for hatching** or **baby chicks** will receive remarkable value this year, as eggs and baby chicks have never been sold from birds of equal quality at prices approaching those I am making for 1914. Many orders are already booked and **early booking insures delivery at exact time you want them.**

Eggs from Best Matings in the World
All Varieties.
$10.00 for 15. $30.00 for 50.
$50.00 for 100.

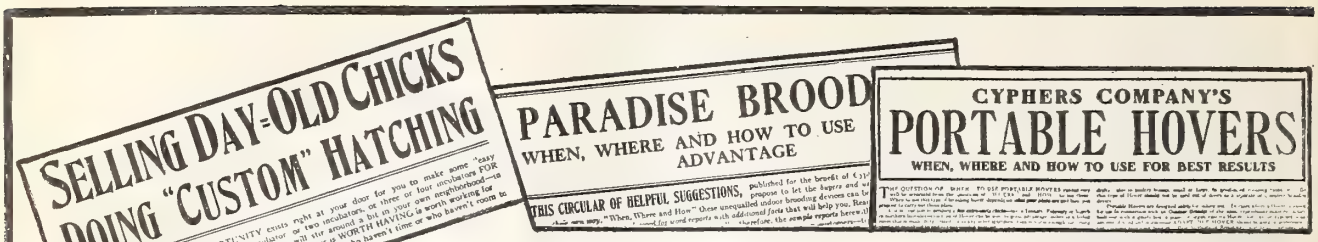
Eggs from Choice Matings
Better than most sold at higher prices.
All Varieties.
$5.00 for 15. $15.00 for 50.
$25.00 for 100.

Baby Chicks from these Matings
$1.50 each in lots of 20 or more at one time.

Baby Chicks from these Matings
50c each in lots of 20 or more at one time.

My **Illustrated Catalogue** gives the History of the wonderful Owen Farms and the Owen Farms' flocks.

My 1914 **Mating List** describes the **Finest Matings in Existence** of my varieties.



A few grand Breeding Pens for Utility or Exhibition Breeding at prices you will gladly pay. State your exact requirements in your inquiry and, if possible, how much you wish to invest.

I want your order, and **Remember**, your **Absolute, Ultimate Satisfaction** means my **Permanent Success.**

Sell Day-Old Chickens

Did You Know, Reader, that by your personal efforts you CAN EARN one, two or three Standard Cyphers Incubators within the next six to twelve weeks? It is a fact that you CAN DO THIS—can do it in your own neighborhood, right in your OWN HOME. Our latest FREE booklet, "Selling Day-old Chicks and Doing Custom Hatching," tells you how, with full particulars. Moreover, while you are EARNING your own incubator, or two or three of them, you can hatch a good-sized flock of big, healthy, vigorous chicks FOR YOURSELF. Please read on this page and the opposite page "sample reports" of what MANY OTHER Cyphers Company customers are now doing (both men and women) in this line of profitable work. The FREE BOOKLET here mentioned tells all about it and will be mailed POSTPAID, on request, to any address.

WHAT OTHERS ARE DOING

"Have Not Been Able to Supply Demand"

Elcho, Wis., July 18, 1913.

Cyphers Incubator Co., Buffalo, N. Y.

I have had another successful year and I believe I made a record for shipping day-old chicks. Of the **thousands shipped by me** to points as far distant as Maryland and Colorado, only two were reported as dying on the way. I consider one of the most important contributing aids to my success to be your make of incubators. To have **strong, vigorous chicks** you must have these qualities in the parent stock and then must use correct hatching and brooding appliances. I have used Cyphers Incubators for years and know that **the chicks hatched in them are larger and stronger** than those hatched in cheap machines.

Here at home I raised over 3,000 chicks this past spring on Cyphers brand foods and **did not lose one from bowel trouble.** Your new "Portable" Self-regulating Hover also fills a long-felt want with me. Shall want more of your incubators and hovers next spring, as **I have greatly enlarged my plant,** especially to take care of the day-old chick trade. With many people this now seems to be the popular way to get small lots of chicks, ranging from fifty chicks up to several hundred and **I have not been able to supply the demand.**

Top Notch Poultry Farm
R. P. Guptill, Proprietor.

He Hatched Last Spring 4,035 Chicks

Mt. Joy, Pa., July 21, 1913.

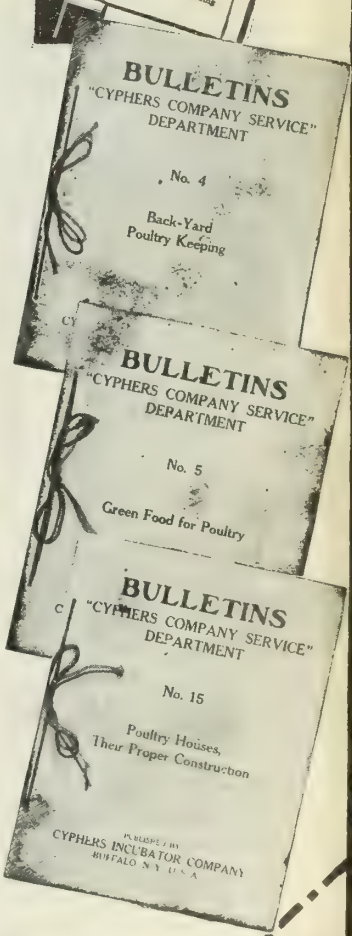
Cyphers Incubator Co., Buffalo, N. Y.

Am pleased to send you a report of the success I had this spring with your incubators in **my day-old chick business,** which was just as good as last spring. I hatched out of your machines this spring 4,035 chicks **and have had good reports from all I sold.** As you know, I have three of your incubators, a 60-egg size, two 244-egg machines and one of your No. 3 incubators that holds 390 to 400 eggs. Here are this year's hatches: No. 3 machine, first hatch, 292 chicks out of 320 fertile eggs; next hatch, 377 chicks out of 389 fertile eggs; third hatch, 348 chicks out of 362 fertile eggs. Out of the 244-egg machine this spring I got, first hatch, 232 chicks out of 237 fertile eggs; next hatch, 226 chicks out of 234 fertile eggs; last hatch 207 chicks out out of 216 fertile eggs. And out of the 60-egg machine I had, first hatch, 58 chicks out of 58 fertile eggs; second hatch, 56 chicks out of 57 fertile eggs.

I know better **than to experiment** as long as I can get your incubators, your brooders and your chicken feeds. NEWPHER SMELTZER.

The Genuine Cyphers Incubator Latest Improved— ***Dependable***

Insurable We ask careful, prudent persons to keep in mind the important fact that EVERY Cyphers Incubator, lamp-heated and electric, also EVERY Cyphers Brooder, equipped with an Adaptable Hover, is fire-proof, is insurable and bears the OFFICIAL INSPECTION LABEL of the expert engineers of the National Board of Fire Underwriters. DEMAND THESE LABELS! Why take chances? Do not get into trouble, nor be "fooled" by false or misleading claims. The OFFICIAL BRASS LABELS are the proof! See that they are on the incubators you buy. It is easy for some manufacturers to "make claims," but it takes a truly fire-proofed incubator to SECURE THE LABELS.



Cyphers Incubator Co.

Department 30 **Buffalo, N. Y.**

Do "Custom" Hatching

Every Spring Season many Cyphers Company customers make large profits, and SAFE profits, by the ready sale of day-old chicks, and by doing "custom" hatching for friends and neighbors. What others HAVE DONE and are NOW DOING, you also can do, Reader, and our FREE PRINTED MATTER tells you how—tells you all you need to know about this splendid country-wide opportunity and tells it in a MORE HELPFUL MANNER than you can find the same reliable, detailed information anywhere else. To be able to SUCCEED WELL in your poultry work you need—you must have—a safe PLAN, correct RULES, trustworthy ADVICE and the RIGHT TOOLS with which to do the work. Cyphers Incubator Company is in a position to supply you with ALL THESE ESSENTIALS and we ask the privilege of doing so—and of doing it NOW.

—YOU LIKEWISE CAN DO

1,700 Chicks "Mostly for Other People."

P.O. Box 635, San Marcos, Texas, June 29, 1913.

Cyphers Incubator Co., Buffalo, N. Y.

Have just wound up another successful year with Cyphers Incubators. From March 4th until May 1st, I hatched 1,700 chickens, **mostly for other people.** I am the only person in San Marcos who owns Cyphers Incubators, and my neighbors have come to believe that **an egg that cannot be hatched in a Cyphers cannot be hatched at all.** As for me, I am confident of this. **They not only hatch the most chickens,** but the **largest and liveliest ones, too.**

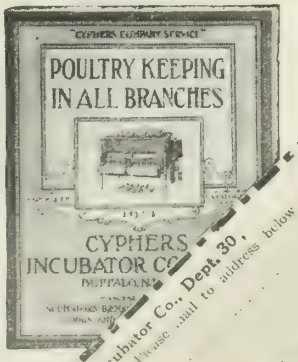
I set two Cyphers machines right along side by side with a ———, ——— and a ———. Not only are the Cyphers Incubators the easiest to operate, but I get the **largest hatches** from them and the **strongest and most vigorous chicks.** My No. 1 Cyphers was bought late in the season, second-hand, and I only set it once, as the hatching season was about over, but got 99 chicks out of 100 fertile eggs **and I raised every chick.** So far as my knowledge goes, no incubator, other than the Cyphers, hatches such strong, healthy chicks. Those hatched by me in the other machines have **died in large numbers** during the first week, although they had the same treatment.

MRS. LOUIS ARMSTRONG.

Mrs. Wright Sold Over 30,000 Chicks

So. Easton, Mass., July 14, 1913.

Cyphers Incubator Co., Buffalo, N. Y.



Three years ago I commenced hatching with one 390-egg capacity Standard Cyphers Incubator, and **now I have ten (10) of your machines;** two of them are of quite old design, having been made about ten years ago. All of the machines are well built and apparently will last indefinitely. Even the oldest machines are **practically as good as new** in every way.

From my experience I have found that there is **no other make of incubators that will produce the same satisfactory results** as will the Standard Cyphers. The system of regulating the machines, supplying ventilation and moisture, **produces large, vigorous chicks, that live and thrive** and develop into fine, large, healthy fowls. This season I have **hatched and sold more than 30,000 chicks,** and everyone who has received shipments from me has said that the chicks were fine and healthy in every way.

I breed Barred Rocks, Light Brahmas and Rhode Island Reds, and **have worked up a large business** in supplying day-old chicks from these popular varieties. I can hatch the chickens from these breeds so that **they look like chickens a week old, when only one day old** and that is why everybody likes them.

(Mrs.) A. M. WRIGHT.

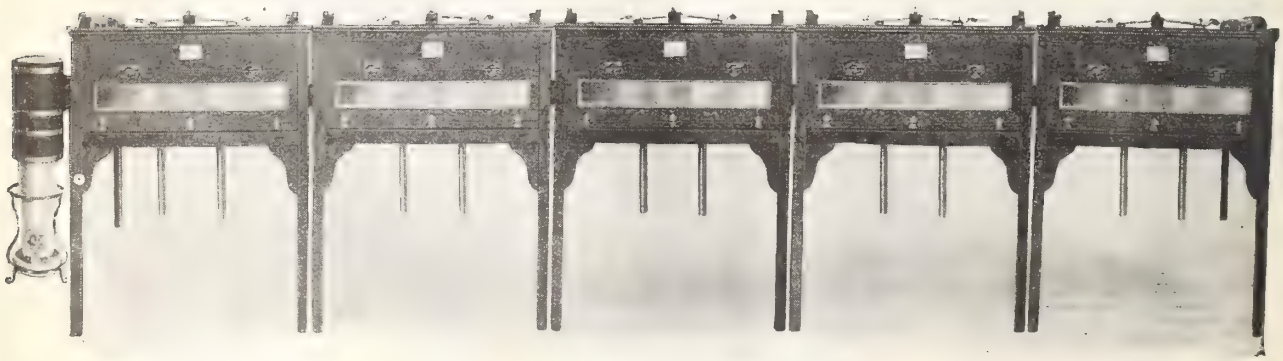
Have You Seen Our Catalogue?

It explains the Schwalge System of Hot Air Mammoth Incubator Sections. It will show you the most practical modern method of incubation. It demonstrates how the Schwalge Hot Air Mammoth has solved the Puzzle.



SCHWALGE'S HOT AIR MAMMOTH INCUBATOR is the only sectional machine on the market, which permits you to start small and increase as your business requires—and the additional sections can be easily added without disturbing the hatch. You simply join the pipes which extend from the end of each section—no tools required. Each machine is operated independently and the temperature of each section is under independent control. No coal to shovel or ashes to handle.

We have taken every precaution to produce an incubator of the highest grade of material and very best workmanship.

This machine has been thoroughly tested and tried in the experimental stage and one of them hatched over 5,000 duck eggs last season.

WINTER EGG MACHINES

FERRIS IMPROVED WHITE LEGHORNS

This Season's Winnings are the only ones that really count. Although we have a long list of winnings extending over several years at such shows as Toledo, Pittsburgh, Chicago, Grand Rapids, Detroit, Louisville, Nashville, Topeka, St. Louis, Indianapolis, Cleveland, etc., the list below includes only those won during the season of 1913-14.

This Record of 35 First Prizes and 41 Second Prizes at 11 Shows in one season has never been equalled or approached by any other breeder. It is an easy matter for a breeder to take all his best birds to one show and make a big winning, but it is not so easy to show in all parts of the country with a different string of birds each week and make the winnings recorded here. Note the number of shows distant from 500 to 1,000 miles from Grand Rapids at which we won most of the prizes in spite of the fact that our birds were travel-stained and tired when they were judged.

Nearly all of these birds are now our exhibition matings. They will produce the winners for a great many of the largest shows next season. It will pay you to let us book your order for stock or eggs from these matings and thus make sure that you will get your share of premiums.

August, 1913, Iowa State Fair—3 firsts and 4 seconds.

September, 1913, Maryland State Fair—3 firsts and 3 seconds.

September, 1913, W. Michigan State Fair—5 firsts and 4 seconds.

September, 1913, West Virginia State Fair—2 firsts and 3 seconds.

September, 1913, Kansas State Fair—2 firsts and 3 seconds.

October, 1913, Alabama State Fair—4 firsts and 3 seconds.

October, 1913, Georgia State Fair—4 firsts and 3 seconds.

October, 1913, Mississippi State Fair—2 firsts and 2 seconds.

November, 1913, St. Louis, Mo.—3 firsts and 2 seconds.

January, 1914, Terre Haute, Ind.—2 firsts and 4 seconds.

January, 1914, Grand Rapids, Mich.—3 firsts and 4 seconds.

CHOICE BREEDING STOCK.

Prices are reasonable, too. We have thousands of birds to select from and are in better shape than ever before to furnish exhibition and breeding stock. Hundreds of exhibition cocks, hens, cockerels and pullets direct from our winners, at $15.00 and up for males, $7.00 and up for females. You will be surprised at the values we are giving at these prices—big, long-bodied birds with beautiful Leghorn shape, good heads, extra low tails and perfect color. Remember that we can furnish winners for any show in the country and will guarantee them to win first prize.

If you want laying and breeding stock, we have fine yearling hens and pullets at $2.50, $3.50 and $5.00 each; cocks and cockerels at $5.00, $7.00 and $10.00 each. These birds are all bred from our trap-nested layers with records of 160 or more eggs a year, and will make foundation stock that cannot be excelled for egg production. They will lay at least two dozen eggs a year more than ordinary stock, and whether you raise few or many they will make the foundation stock you need for greatest success.

All stock is sold on a positive guarantee to please you, or money refunded. Keep them three days, compare them with others, and if they don't suit you in every way, send them back at our expense. We also ship C. O. D. if desired, in which case you only need send enough money to pay express one way. All stock is insured for 30 days—we stand the loss if any die.

EGGS AND DAY-OLD CHICKS.

We are now booking orders for spring delivery. Thousands of fine hens in our bred-to-lay matings and fifteen of the best exhibition matings that have ever been mated. Prices are remarkably reasonable and we replace all infertile eggs free and guarantee safe arrival of chicks any distance. Our capacity of 5,000 chicks a week enables us to ship large or small orders promptly and to quote low prices. Write us for particulars.

OUR GUARANTEE ON EGGS.

Our guarantee on eggs is as fair as our guarantee on stock. We endeavor to protect our customers and want you to be perfectly satisfied. When you do not get satisfactory results tell us and we will do everything possible to make it right.

We replace all infertile eggs free of charge. It is well to be careful that you do not get eggs from late hatched stock that is not mature, for eggs from immature Leghorns are as worthless as eggs from any other breed. If you want eggs from yearling hens we can furnish them, for over half the birds in our breeding pens are yearling hens.

CAN SHIP ANYWHERE.

We can ship eggs safely anywhere in the United States, Canada or Mexico, and will guarantee fertility. We ship no eggs more than three or four days old, and nearly all eggs are shipped the next day after they are laid, for during the regular hatching season we usually have orders booked a week or more ahead and we make shipments every day.

There is a great difference in eggs for hatching, and if you want good results you must be particular to get eggs from stock that has been handled properly. It is very easy for a careless breeder to so handle his stock that the eggs will not hatch well nor even produce strong chicks when they do hatch. Lack of exercise, improper feed, overcrowding and neglect, or any of several other important details will decidedly affect the results that can be secured from the eggs.

DAY-OLD CHICKS.

Chicks can be shipped 1,000 miles with safety, and in some instances where there is fast train service, as high as 1,500 miles. We guarantee safe arrival at any express office within 1,000 miles from Grand Rapids—a radius that includes two-thirds of the United States and Canada.

Our loss in shipping has averaged less than 2 per cent during the past four years, and our customers have had good success raising the chicks, which proves that the stock is hardy and vigorous and that the chicks have not been injured in the least by shipping. In fact, it is much safer to order chicks than eggs because chicks are nearly always handled more carefully than eggs.

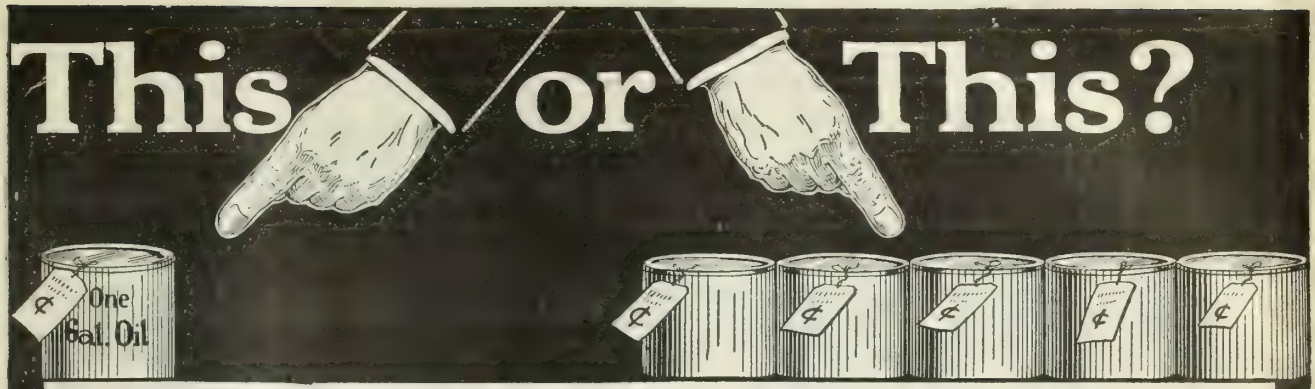
BRED-TO-LAY UTILITY MATINGS.

All our twelve years' efforts to increase egg production are in the breeding of these birds, and although they do not score high enough to make breeders of exhibition stock, they will give you stock that can not be surpassed for laying purposes by any other that can be bought. We allow no birds in these pens that are not good breeders. The eggs are big, selected for even shape and color and will produce strong, hardy chicks.

We can furnish eggs and chicks in any quantity and the price of eggs will be $14.00 per 100 during February, $12.00 during March and $10.00 during April. Settings of 15 eggs, February, $2.55; March, $2.25, and April, $1.95.

Day-old chicks, March, $28.00 per 100; April, $24.00; May, $20.00. In lots of 25, March, $8.00; April, $7.00; May, $6.00.

For other prices and complete description of these matings send for our 1914 catalog.



We also have some specially selected breeding pens composed of birds scoring from 92 to 94, from which we sell eggs and chicks at double the prices of the utility matings.

GET THIS CATALOG TODAY.

Read the complete story of FERRIS WHITE LEGHORNS in the 132-page free catalogue, which we will be glad to send you. Learn how we developed the laying qualities so that records of 160 to 200 eggs per year are common, how we improved exhibition qualities until today FERRIS LEGHORNS sweep everything wherever they are shown; how we feed, house and manage our stock. FERRIS LEGHORN FARM, George B. Ferris, 905 N. Union Ave., GRAND RAPIDS, MICHIGAN

This or This?

With X-Ray Incubator only **One** gallon for entire hatch.

With other incubators **Five** gallons required for hatch.

Let X-Ray Incubator Save You 4 Gallons of Oil on Every Hatch

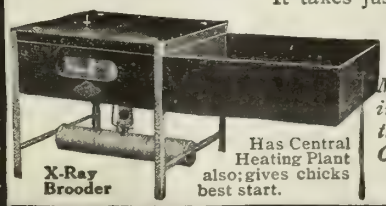
The X-Ray actually makes this saving for you. Saves you 75c to $1.25 on every hatch—four to six dollars a season on oil.

It is the only incubator in the world that can do it. Why? Because the lamp is **underneath**—squarely underneath the egg chamber—where it ought to be. The lamp produces just the heat needed at all times—and all the heat is **used**. Used **properly**—evenly distributed—in the X-Ray and no other.

That's why it saves—saves you money—**insures** you far the largest per cent of your hatch.

There's no cold side. There's no overheated corner—just the right hatching temperature in every nook. It saves you oil. It saves you eggs—and that's not all. It saves you a world of work and worry. You fill the big 4 to 8 quart oil tank **just once**—at the beginning of the hatch. You don't have to bother with filling again. No more filling jobs until the hatch comes off. Think of that.

And that's not all. You don't have to bother with the burner either. The X-Ray is the machine with the automatic trip at the burner. It works **itself**—cuts down the flame if heat exceeds the need—lets out more flame if the temperature drops. It doesn't think, but it does better. It never "forgets."



There's a vast difference between the X-Ray — the scientific incubator and the old fashioned kind. 750,000 incubator users now know why the X-Ray is 100 per cent efficient on so many hatches—why a lot of old-time work is now unnecessary.

The X-Ray is the simplest, yet practically every feature is a special feature. Go over it, notice the two double glass panels in the top. You can look at the eggs any time without raising the lid or letting in cold air. Ventilate or turn eggs simply by raising lid.

It takes just 15 minutes to raise X-Ray to hatching temperature. 4 to 8 hours for others.

Our new factory at Des Moines is the largest exclusive incubator factory in the world, the most modernly equipped. Come and see it if you can.

X-Ray Brooder Has Central Heating Plant also; gives chicks best start.

And the X-Ray Brooder Just as Much Ahead

The lamp is beneath—same as in X-Ray incubator. It makes the difference between saving chicks and losing them. And that means poultry profits.

WE ASK YOU TO TRY OUR FEEDING METHODS

RAISING THE CHICKS you hatch is the most difficult—also the most important part of your poultry work. The question of ***whether or not*** your poultry enterprise is to ***show a profit*** will be decided by the success you have in carrying the chicks through in safety and vigor from the incubator to the colony coop or fattening pen. If for any reason ***you are not able*** to raise the chicks—and the ***right kind of chicks***—partial or total failure is unavoidable.

READER, we ask you to TRY THIS SPRING the "Cyphers Company Way" of feeding little chicks. We want you to know about the "deep-litter method" and to ***profit by its use.*** We are anxious to tell you what you should KNOW about the values of Mealed and Short-Cut Alfalfa, about sprouting oats, about the profitable use of High-Protein Meat Scrap, etc. This is ALL TOLD in plain terms in our 52-page FREE BOOKLET, "Poultry Foods and Feeding," which we will send to any address, postpaid, on request. Please write for YOUR COPY today—right now, before you forget it.

This Book Would be Cheap at $5.00 Per Copy, Judged by Actual, Detailed Value of Contents. Tells How To Produce Broilers, Fryers, Roasting Chickens and Capons; Also Exactly How to Feed the Layers and Breeders. 52 Pages, 7x10 Inches. One FREE COPY on Request to Any Address.

It has long been said that the "proof of the pudding is in the eating of it." The proof of the VALUE of Cyphers Sealed-bag, trade-mark brand, balanced-ration poultry foods ***is in the feeding of them***—is to be found in the highly profitable results obtained by our thousands of customers who ***use these foods annually*** in raising their chicks with uniform success. Following is evidence:

Recent Sample Reports From Customers

"2¼ LBS. AT ELEVEN WEEKS"

Cleveland, Ohio, September 25, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

A great **aid to success in raising chicks** is the use of your balanced-ration, ready-mixed poultry foods which I use in considerable quantities, especially Chick Food, Developing Food and Growing Mash. I find these Cyphers-brand foods to be **free from dirt and waste material** and my experience is that they are the cheapest foods on the market. My Orpington broilers **averaged** to weigh 2¼ lbs. **in eleven weeks** throughout the whole flock. These results were obtained by following your printed directions, **which are furnished complete** in your booklet, "Foods and Feeding." Before using Cyphers Chick Food I lost a great proportion of the chicks. In future nothing but Cyphers Company products will be used by me.

DAVID I. SAWDEY, 2134 E. 107th Street.

"SAVES TIME—CHICKS GROW FASTER"

Riverhead, N. Y., August 6, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

Am in the poultry business **and making money out of it**; do not know any business I like better. I use Cyphers balanced-ration poultry foods and obtain **the best of satisfaction.** Have tried the Cyphers plan of "deep-litter feeding" for little chicks and believe it is the **best system in existence.** It saves time and the little chicks grow much faster and are more healthy. I was **able to care for** a great many more chicks **and to do so to better advantage.** I have always found Cyphers Foods sweet and clean and the chicks eat it up **without any waste.** If poultrymen who are not making their venture a success will adopt the "Cyphers Way" of feeding and rearing their chicks, they will surely meet with success.

H. W. TUTHILL.

"TON OF YOUR FOODS PER MONTH"

Kansas City, Mo., August 5, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I am using Cyphers Sealed-bag brand poultry foods and **they have given entire satisfaction.** For the past five years I have used nearly one ton of your balanced-ration poultry foods per month, **which is sufficient evidence** as to how well they have pleased me. I find that the real feeding value is in Cyphers Foods and they **do not contain waste material, musty grains** or other objectionable matter, as do so many of the other prepared poultry foods offered to poultrymen. During the past year **we made exceptionally fine winnings** at the largest western and southern poultry shows and our birds were hatched in Cyphers Incubators, reared in Cyphers Brooders and fed on Cyphers Foods.

PINE VIEW FARM, W. R. Kendall, Prop.

"NO TROUBLE WITH CHICK AILMENTS"

Plato Center, Ill., July 29, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

We use your balanced-ration poultry foods **exclusively** and have not had any trouble with white diarrhœa and other similar chick ailments. Our experience **leads us to believe** that poor brooding and improper feeding are the cause of most diarrhœa in chicks and **there is no excuse for this** when Cyphers Poultry Foods and Cyphers Brooding Hovers are used. We have used quite a few tons of your Chick Food during the past year and **have not found a single particle** of it that did not appear to be first-class in every way—quality uniform, no smutty grains, no waste, **no foreign matter used for filling.** All of your goods have given us excellent satisfaction.

MUIRHEAD BROS.,
Per G. F. Muirhead.

"2-LB. BROILERS IN 11 WEEKS"

Nyack, N. Y., August 9, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I have been delighted with the **excellent results** obtained by using your Cyphers balanced-ration, sealed-bag brand poultry foods. I get 2-lb. Barred Rock broilers in eleven weeks by following the "Cyphers System" of feeding. I find Cyphers Foods to be **clean and sweet, with no bits of straw, pieces of wood or other foreign matter,** which we often get when buying poultry foods at the local feed stores. Then again when we handle it in feeding the chicks it has the "feel"—the **weight, quality and value are there.** The other local foods are light and dusty by comparison and don't have the Cyphers feel. Just received a supply of Cyphers Growing Mash today and judging **by the way my chicks went into it** you would think they never before had anything to eat.

WALTER B. MANNING.

Cyphers Company's Chick Food

This 100-Lb. Bag will Feed 100 Newly-Hatched Chicks Four Weeks, or 50 Chicks Six to Seven Weeks. Price $2.50 f. o. b. Buffalo, Boston, New York City, Chicago and Kansas City. Price f. o. b. Oakland, $3.00. Order Sample Bag From This Advertisement.

Fight Lice Right With Lee's Lice Killer

THE **only** safe, sure and economical way to rid your poultry house and poultry of all vermin, and with none of the disagreeable work incident to dusting, dipping, greasing, or treating each fowl **individually.**

It requires from two to three minutes each to dust a hen, besides the always present danger of transmitting at least some of the vermin from the hen's body to yourself.

The "dipping" process is equally laborious, disagreeable and uncertain —time, labor, patience and money wasted absolutely—for even though you may finally destroy all vermin on each of your chickens you have only **begun,** not really touched the **source** of origin.

Dipping is inhuman in treating chickens —always fraught with danger—weakens the fowl's system—induces colds, **roup** and similar ailments. **DON'T DIP.**

Lee's Lice Killer has all the destructive properties in **contact** as any powder or dip and, **besides,** the vapor that it gives off, destructive to insect life but absolutely harmless to the fowl, permeates the fluff and feathers, goes into every crack and crevice of the poultry house and finds even the most remote hiding place of all vermin and **destroys** them. **Lee's Lice Killer without its destructive vapor is superior to any** other powder or liquid preparation.

And it is useless to kill the lice on the bodies of your chickens unless you drive the vermin from these other hiding and breeding places. Every crack and crevice, every corner, every nest-box, every board and perch in the poultry house is a breeding place for all kinds of vermin. That's where you find the **mites, chiggers, ticks, bedbugs.**

Lee's Lice Killer (liquid) does all the work thoroughly; kills **all** vermin, whether on the body of the fowl or about the poultry-house, **at** the same time thoroughly disinfecting the houses, floors, runs, and destroying these germs.

Convenient Sizes and Prices—35c, 60c and $1.00

Lee's Louse Powder
Sifter-top Can

It is made with a view to utmost effectiveness on setting hens and little chicks, and where a powder is actually preferred you can find none better than Lee's. It is quite inexpensive, does its work thoroughly, and is prepared in sizes and at prices as follows:

1¼ lb. can, **25c** 3 lb. can, **50c**

The Lee Sprayer

is the only kind you should buy (unless you go into the expensive compressed-air sprayers). It's patented—sprays "straight up"—any other pump of this style is only an imitation at best. **Take no chances. Ask for the Lee —and be sure you get it.**

Price, 50 Cents

If larger sprayers are desired send for our special sprayer catalog.

Germozone

For Roup, Colds and Other Poultry Diseases—Saves the Chicks

Fully half of the deaths among chicks are due to bowel complaint. Bowel complaint is the result of the chicks being chilled, overheated in brooder, or being fed old, impure or musty feed. Any poultryman can hatch chicks, but the great problem is to raise them. Help the chicks withstand these adverse conditions and you will have little trouble raising them. Germozone will check bowel trouble in twenty-four hours and places the chicks in a natural, healthy condition. It tones the system, aids digestion, puts new life into sickly chicks. For older chickens, there is no better remedy for Roup, Colds, Chickenpox and other poultry diseases. No trouble—simply put Germozone in drinking-water twice a week.

Liquid or Tablet—Price 50 Cents

Lee's Egg Maker

—the most successful combination of those food elements necessary to strong, vigorous birds, and to the production of the largest number of eggs.

It furnishes the material necessary to turn the largest amount of food into eggs. **Protein—digestible** protein—that's it! Meat food in many forms is conveniently obtainable, but little of it is digestible.

Lee's Egg Maker contains **more** protein in **digestible** form than other meat foods. Its base is principally granulated blood (deodorized) and with which is combined blood purifying, tonic and palatable qualities that makes it a **superior** product in every way. **There is not one ounce of bran,** sand, shell or other cheap and worthless filler in our product. No other poultry food looks like it, smells like it, or resembles it in any way. **Lee's Egg Maker** is clean, wholesome, thoroughly sterilized, and absolutely free from maggots and other vermin so common to the ordinary commercial brands of meat food. Our guarantee is broad—the **risk all** ours—while the feeding cost **(50 feeds for 1 cent)** is so small as to be hardly noticeable.

2½ lbs.. **25c** 5½ lbs., **50c** 15 lbs., **$1.25** 25 lbs., **$2.00** 100 lbs., **$7.50**

GEO. H. LEE COMPANY, 930 Harney St., Omaha, Neb.

Don't Forget that Lee's goods are made by Lee, a successful poultryman for more than twenty-five years —that every article in the Lee line is in regular use on the Mandy Lee farm, where may be seen at any time from 2,000 to 5,000 of the healthiest, liveliest, prettiest chickens to be found anywhere

—that what has made Lee's stock famous is pretty certain to help yours; and

—that our experience and our knowledge of poultry requirements tells us what is needed, while more than forty patents on file at the United States Patent Office in Washington under our name is pretty conclusive evidence of our ability to make what is needed. **Try the "Lee" way**

Ask for Lee's Poultry Book—Free

Read These Letters

I wish to say, as one of the oldest as well as one of the largest breeders of White Wyandottes in the United States (and my poultry experience dates back eighteen years), that Lee's Lice Killer is one of the best, if not the very best, preparation to rid and keep poultry free from lice. I have used it for more than ten years and so should know all about it. I have never found a better one. I keep it on my plant all the time. Come and see me, and if you get a louse on you in any of my twenty large houses I will make you a present of the best pair of birds on the place.

CHAS. V. KEELER,
Poultry Judge and World's Famous Breeder of White Wyandottes,
Winamac, Ind.

* * *

I have never been able to find any other make of Lice Killer that gave as good results as "Lee's." It surely does the work. U. R. FISHEL,
Largest Breeder of White Plymouth Rocks in the United States, Hope, Ind.

* * *

After having used your Lice Killer in our poultry yards for more than ten years, and having compared it and used it with many other brands of Lice Killers, we can truthfully say that it is far superior to any other, and as a result of the tests we have made we use Lee's Lice Killer exclusively. It does all and more than is claimed for it and is perfectly satisfactory.

D. F. PALMER & SONS,
Breeders of Barred Plymouth Rocks,
Yorkville, Ill.

* * *

Of more than a dozen so-called Lice Killers on the market I would use nothing but Lee's. It is the only real Lice Killer. I am an old breeder of poultry and am known as such around here, and have always found Lee's Lice Killer perfectly satisfactory.

WM. V. SCHLOSSER,
Breeder of White Orpingtons,
Beloit, Wis.

Germozone Letters

I have used Germozone continually for four years. I attribute to its use the fact that we never have a case of diarrhoea on our place.

MRS. B. B. ROMIG,
Woodland, Mo.

* * *

Before I began to use Germozone I used to find two or three dead chickens every once in a while; now when I open a coop I see nothing but healthy chicks. Last spring I only lost three out of 400, and they were weak to start with. I am never without Germozone. You may use this letter if it will help convince others of the value of Germozone.

MRS. W. A. EDDINGTON,
Irvington, Ill.

* * *

Have used Germozone with great success; raised 95 per cent of all chicks hatched and give Germozone the credit. Had a hen in dying condition with roup and five days after we began giving her Germozone she laid an egg

J. H. STEPHENSON,
Cornelius, Ore.

The Greatest Prize-Winners of All Time

At the Chicago Coliseum
(National Official) Poultry Show

Flanders' S. C. W. Leghorns

The judges declared that the class of S. C. Leghorns at the Chicago Coliseum Nat'l Official Poultry Show, Dec. 13, 1913, was the finest ever exhibited.

Think what it means for one strain to win against such competition! And especially such honors as these:

1st, 3d, 4th and 5th Cock
1st, 3d and 4th Cockerel
1st and 3d Hen
1st Old Pen
1st Young Pen

The strain that won these never-before-equaled honors is Flanders' Strain of S. C. White Leghorns. Competent judges acknowledged them the finest White Leghorns ever exhibited.

Now, the only question for you to decide is—do you want to start with second or third grade birds—or the best in the country (which means practically the world)?

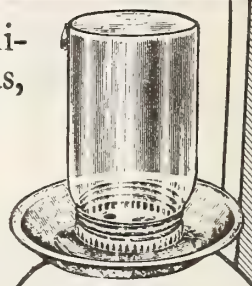
The Flanders' Strain of S. C. White Leghorns was originated 8 years ago by Robert Parmenter. His birds began to win at the big shows in 1908 and have been winners every year since.

About a year ago he formed a partnership with Walter E. Flanders, of Holstein Cattle fame. This gave him the advantage of one of the largest and finest Poultry Plants extant, and 250 acres of range. Because of the fame of the Flanders' farm, and to avoid confusion, the name of the strain was changed to "Flanders."

The result shows in the above honors heaped upon the Flanders' Strain. You never saw such overwhelming winnings before, nor did you ever before see a strain of poultry that deserved them. The Flanders' Strain of S. C. White Leghorns is the finest bred to date.

Start with the best for exhibition purposes, for eggs, for flesh, for hardiness. Write us for price lists on Matings, Eggs, Day-Old Chicks, etc. Satisfaction guaranteed absolutely.

Flanders White Leghorn Farm



Robert Parmenter, Mgr., Box A, Orchard Lake, Mich.

It's the Healthy Birds that Boost Poultry Profits —Why Not Have Them?

YOU can now feed your entire poultry yard with a minimum of time and expense. You can raise *more* birds, keep them *healthier* and save money on feed.

Kentuco Poultry Ware makes this possible. It will save your time and give you the best possible insurance of serving the pure feed and water that make big, healthy, profit-making birds.

How you feed poultry is really more important than *what* you feed. The best feed is worthless if it reaches the birds polluted. It's impure feed and water that causes most epidemics in the poultry yard. Nothing affects the poultryman's pocketbook more keenly. You can guard against this with

FREE
Kentuco Jar Fountain
Simply screw the base onto any Mason jar. It's handy and practical. To introduce Kentuco Ware Construction, we send the base free if you will enclose 10c in stamps to cover postage and packing.

KENTUCO
Poultry Ware

It's the ware that *really makes poultry profits* by *protecting* bird health and saving feed. Take for example the two-piece fountain shown to the left. This, like all Kentuco Fountains, is galvanized *after* it's made. There is no chance for rust.

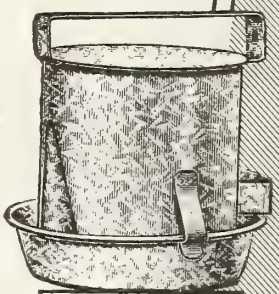
Fill the reservoir, invert it, and the chicks are served a plentiful supply of clean water as fast as they consume it. They cannot get into the pan, and they cannot perch on the cone top and pollute it with droppings.

With Kentuco construction, you get top notch quality at no greater price than less worthy stuff.

For another illustration, take the jar fountain which we give away free. There are designs like this on the market, but it's just impossible to invert them without being splashed with water.

You avoid this with the Kentuco Jar Fountain. Send for it and note how the metal cap protects you.

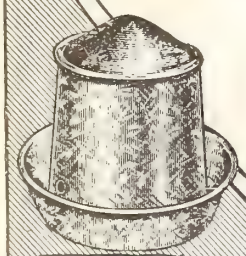
Study the design of the Kentuco Food Hopper illustrated below. Feed cannot clog in this reservoir, neither can the tray become loosened, for the entire back, bottom and front is all one sheet.



There's always feed in the tray, yet the birds cannot waste it.

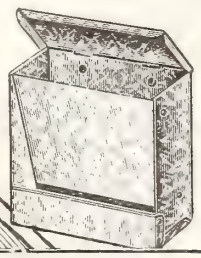
Birds cannot perch on the slanting top and pollute feed in the tray.

It's features like these that win preference for Kentuco Ware. Equip your entire poultry yard with Kentuco Ware. Every piece earns its cost quickly by either protecting health or saving feed.

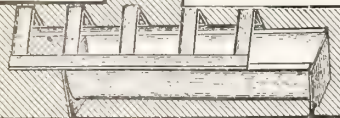


Write Us at Once

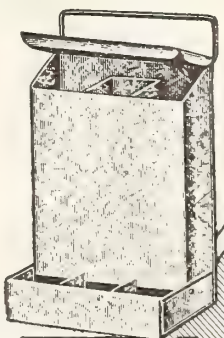
for our big folder that tells the money-making facts about poultry. Ask for Kentuco Poultry Ware from your dealer. If he does not carry it, we will ship you direct. In writing, please mention your county, as well as your city and state. Ask for the free Jar Fountain if you want it.



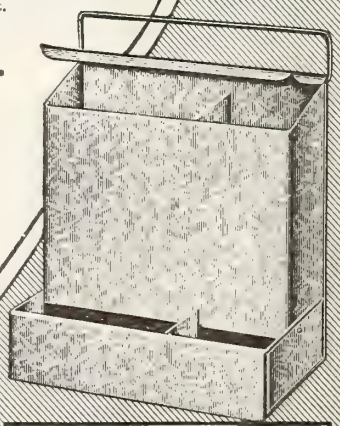
Kentuco Sanitary Wall Fountain
Two pieces—detachable. You can clean the reservoir with a brush.



Kentucky Stamping Company
104 No. 15th St., Louisville, Ky.



Kentuco Two-Piece Fountain
Cannot leak or rust.



Kentuco Chick Feeder
The result of 15 experiments, sturdily constructed — chicks cannot waste feed or pollute it.

Kentuco Feed and Water Trough—Rounded bottom keeps feed in center. Top prevents birds wasting feed.

Kentuco Grit Box—Feeds grit, shells and charcoal at the same time.

Kentuco Food Hopper
Food cannot clog in reservoir—birds cannot waste food nor pollute feed in tray.

Mrs. Laura J. Clark, Illinois

Mrs. Alta Hamlyn, Ind.

Mr. F. E. Bennett, Ohio

Mrs. F. H. Osman, Ohio

Mrs. M. J. Clifton, Oklahoma

"TYCOS" CUP won by the Belle City

Write Today for My Free Book "Hatching Facts"—It Means More Money to You

GET the whole story of these Championship hatches with the Belle City. Get the stories of thousands of men and women who are getting 100% perfect hatches. Satisfy yourself. This great book is free. Write for it today. No other incubator made—not even the highest priced—approaches this amazing record of my Belle City. I have the letters of owners to prove it. Many of these letters are printed in this book "Hatching Facts." They tell you how Belle City owners are making *the most money* in the Poultry business. You certainly want this book. A postal gets it.

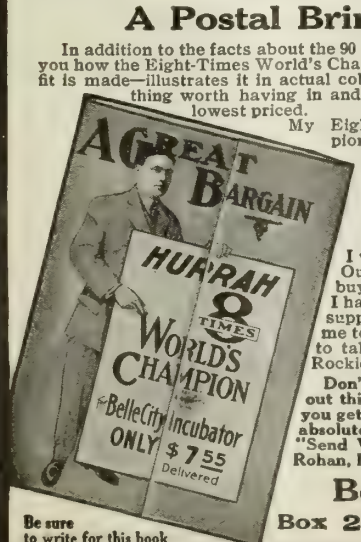
When You Buy from Me You Get an Exact Duplicate of the Prize Winning

Eight Times World's Champion Belle City

I send you an exact duplicate of the hatching outfit used by Mrs. Alta Hamlyn of Indiana, who joins the Belle City's list of World's Champions with TWO 100% hatches scored by her Belle City Incubator in Successful Farming's 1913 contest. Mrs. Hamlyn says: "I can hatch every fertile egg in my Belle City and regard your honesty the keynote to success." I send you an exact duplicate of the Belle City Hatching Outfit used by William C. Schott of Iowa, who shares the 1913 honors. His 100% hatch, 140 chicks from 140 eggs, won another World's Championship for the Belle City in Successful Farming's 1913 Contest. Mr. Schott writes: "The Belle City is the best incubator made—has given much more satisfaction than high-priced machines." I send you an exact duplicate of the Belle City Outfit used by each of the other world's champions whose pictures appear above.

The Kind "Uncle Sam" Uses

I send you an exact duplicate of the Belle City machines chosen by the U. S. Government. The Department of the Interior is one of my customers. The department asked for prices on 300-egg sized machines, but ordered my 140-egg Belle City machines, because even "Uncle Sam" wants to have Championship hatches, too.



I send you an exact duplicate of the Belle City Hatching Outfits used by leading agricultural colleges.

I send you an exact duplicate of the Belle City Hatching Outfit that won the gold lined silver "Tycos" Cup and the Championship for Mrs. Osman.

A Postal Brings You the Big Portfolio, "Hatching Facts"

In addition to the facts about the 90 to 100 per cent hatches, it tells you how the Eight-Times World's Champion Belle City Hatching Outfit is made—illustrates it in actual colors. Shows that it has every thing worth having in and on an incubator, yet it is the lowest priced.

My Eight-Times World's Champion Bell City Incubator has Oakes double disc self-regulator, correct hot water heating system, copper tank and boiler, safety lamp, double walls and double door and dead air space all over, with roomy nursery and strong egg tray. Of course, the thermometer is right: I use the "Tycos." I also supply egg tester, Edw. Miller sun hinge burner, funnel, everything you need, including valuable instruction book on operating, hatching and care of chicks. The book tells you all about my world famous 140-Chick Belle City Brooder—the only double-walled, hot water, top heat brooder made, guaranteed to raise largest percentage of chicks every time—a fitting companion to my World's Championship Belle City Incubator.

Be sure to write for this book

Ask for My Low Price

I will show you why I can send you my Belle City Hatching Outfit at half or less than half what others cost you! You buy direct from me. You pay no agents' or dealers' profits. I have prepared to build fifty thousand Belle City outfits to supply the demand for this season. This big volume enables me to cut my profit down lower than anybody else can afford to take—and I prepay the freight to all points east of the Rockies and allow it that far to points beyond.

Don't turn this page without either writing to me or else tearing out this advertisement as a reminder. Whether you order or not, you get all my valuable World's Championship "Hatching Facts" absolutely free! But be sure to write to me today. Just say, "Send World's Championship 'Hatching Facts.'" Address Jim Rohan, President.

That is our guarantee. So order right now direct from this advertisement.

Peerless-60 All Metal Incubator

is the latest and last word in incubator manufacturing—"a vast improvement" over the old box type. Built entirely of metal, rust and fireproof, no wood to warp, crack or rot. Absolutely impossible for poisonous gases to form. Holds 60 eggs without crowding—is always clean and sanitary. Thermometer is built right into the machine, always in plain sight—no burning of fingers or lifting of top to see the temperature. The eggs are heated from above by a triple wall heat radiator—all heat is utilized. With the patent damper and flame regulator the regulation of heat, moisture and ventilation is entirely automatic—impossible to overheat. Simple and safe and burns less oil than any other. It is the one and only real "chick maker."

Simplex Feather Brooder

is the only brooder that hovers chicks nature's way—"under natural feathers" without the aid of artificial heat. Made of galvanized iron, without wood to warp and rot, and on the inside is the hover made of NATURAL FEATHERS, which raises the chicks just as nature intended they should be raised. It is against all rules of nature to raise chicks by artificial heat. That is why the Simplex Perfection Feather Brooder is the one brooder to use—it is just following nature's rules. No fire—no smothering—no chilling—no leg weakness—no overheating—no gases or fumes, no crowding—no bowel trouble—no fuel to buy or lamps to replace. Absolutely weather and rat proof; can be used in or outdoors. The one sure "chick raiser."

I Will Tell You How to

Make Poultry Healthy
Make Hens Lay
Make Chicks Grow

GILBERT HESS

Doctor of Veterinary Science
Doctor of Medicine

U. S. Dispensatory
Medical Colleges
Noted Veterinarians
all certify the ingredients of
Dr. Hess
Poultry Pan-a-ce-a
to do just what I claim for them.

Nux Vomica. A nerve tonic.
Quassia. A bitter stomachic and appetizer.
Carbonate of Lime. An antacid and shell-forming.
Hyposulphite of Soda. An internal antiseptic.
Iron (Sulphate). A blood builder.
Iron (Red Oxide). A blood builder.
Potassium Nitrate. An eliminant.
Sodium Chloride. An appetizer and cleanser.

Under the supervision of Dr. Hess (M. D., D. V. S.) the above is carefully compounded and blended with just enough cereal meal to make a perfect mixture.

The crying need of the poultry raiser right now is healthy, fertile eggs for hatching. Mating time is the time of all times that poultry need a tonic and internal antiseptic to put them in the pink of condition—free from disease. Then you get healthy, vigorous chicks that stand a far better chance of reaching maturity. Your hens should be toned up and in the pink of condition right now. The egg organs should be active and responsive, the appetite good and digestion likewise; and let me remind you of one thing before the chicks do come—more than one-half the yearly hatch succumb to Gapes, Leg Weakness, Indigestion and Lice and most of these can be avoided.

Being a doctor of medicine and a doctor of veterinary science, twenty-five years ago I combined science with poultry culture. I have learned what poultry need to make them healthy, what hens need to make them lay, and what your chicks need to help them along to a robust henhood. And I now urge you to start right in and feed your flock my prescription—

Dr. Hess Poultry PAN-A-CE-A

Not a stimulant, but a tonic.

In this scientific poultry preparation I have put every ingredient that my twenty-five years' expereince tells me poultry need to make them well; that a hen needs to make her lay; that chicks require to make them grow. It cures cholera; an excellent constitutional treatment for Roup; cures Gapes, Leg Weakness, Indigestion and the like. In my left hand I hold the formula of my Pan-a-ce-a, showing every ingredient, what each ingredient is for and certified to by the U. S. Dispensatory---one of the world's greatest authorities.

I absolutely guarantee that Dr. Hess Poultry Pan-a-ce-a will make your poultry healthy---will tone up the dormant egg organs and compel each hen to lay regularly---help chicks grow---get fertile eggs for hatching and shorten the moulting period.

So sure am I that my Pan-a-ce-a will pay you and pay you well, that I want you to take the coupon at the bottom of this page to my dealer in your town and he will give you a trial package absolutely free of charge. I have also authorized him to give you enough Pan-a-ce-a for all your poultry, and if it does not do all that I claim, return the empty packages and get your money back,

Remember this, Dr. Hess Poultry Pan-a-ce-a is never sold by peddlers, but only by reliable dealers whom you know. 1½ lbs, 25c; 5 lbs. 60c; 25 lb. pail $2.50. Except in Canada and the far West.

Don't forget to get your trial package---it's free---take the coupon to my dealer in your town. If no dealer in your town, send us five cents in stamps to pay postage, give us the name and address of your dealer and we will send the trial package direct.

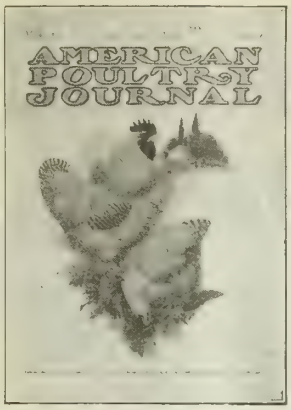
DR. HESS & CLARK, Ashland, Ohio.

Dr. Hess Stock Tonic

Your stock need this tonic and laxative conditioner now. There's nothing better to put horses in trim for hard spring and summer work. Milch cows need it badly just now to prepare them for the heavy milking season ahead. Dr. Hess Stock Tonic makes all stock healthy---keeps them toned up and expels worms. Sold under a money-back guarantee. 25 lb. pail, $1.60; 100 lb. sack $5; smaller packages as low as 50c. Except in Canada, the far West and the South. Send 2c stamp for my new free Stock Tonic book.

Dr. Hess Instant Louse Killer

Kills lice on poultry and all farm stock. Dust the hens and chicks with it, sprinkle it on the roosts, in the cracks or, if kept in the dust baths, the hens will distribute it. Also destroys bugs on cucumber, squash and melon vines, cabbage worms, etc., slugs on rose bushes, etc. Comes in handy, sifting-top cans, 1 lb. 25c; 3 lbs. 60c. Except in Canada and the far West. I guarantee it.



Name

Address

Please hand bearer of this coupon a trial package of Dr. Hess Poultry Pan-a-ce-a absolutely free—to feed 12 hens for 2 weeks. Also give bearer my free new poultry book.

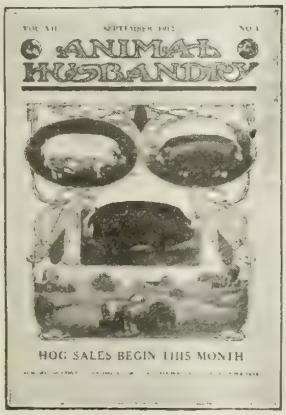
FOR THE POULTRYMAN

The American Poultry Journal

the paper that prints the poultry news that is accepted as authentic

The American Poultry Journal is the paper that leads—it is the One Great Poultry Paper of America; it is the oldest, largest and best. Established in 1874. Contains as high as 252 pages per issue. It is the only Journal that has a colored supplement and colored cover. Its editorial staff embraces the most noted poultry authorities in the country. It tells you how to breed and raise better birds, how to prevent disease in your flock, and how to cure the ailments of your birds. It is the first aid to all owners of poultry—tells you how to construct poultry houses, how to run your incubator and brooder so as to get the best results. In fact, each issue is an encyclopaedia of poultry.

FOR THE DAIRYMAN



Farm and Home

the semi-monthly paper for farmer, dairyman and gardener, is in a class by itself

Farm and Home, the paper that lives up to its name. Published twice a month at Springfield, Mass.; deals with everything of interest to the housekeeper, farmer, gardener, fruit grower, dairyman and farmer. It is chuck full of knowledge and advice of home and farm experts. All in all, it is conceded to be one of the best papers of its kind in the country.

FOR THE BREEDER

Animal Husbandry

The breeder's gazette. If there is anything you want to know about livestock, it's in this paper

Animal Husbandry, best known as a journal for breeders. It is the breeder's gazette devoted to the interests and welfare of livestock of every description. Published once a month at Chicago, Illinois. Its writers composed of some of the best livestock authorities in the country. It teaches you how to raise better stock, how to feed at reduced cost, how to prevent and cure common stock diseases—and, the most important of all—how to realize the most profit from your stock. It is strictly a breeder's paper.

JUST THINK OF IT!

All three of these great journals one year each for the price of one

$1.00

A $2 Value for $1

The regular price of these magazines is $2.00. With this offer you save $1.00, and in return you get a complete encyclopaedia of everything pertaining to ducks, chickens, garden, fruit, dairy and all livestock.

Contented Chickens

Feeding themselves with a Simplicity Kant-Klog Poultry Feeder

IT is the one necessary poultry appliance that every raiser of poultry cannot afford to be without. No matter if you raise six or six thousand chickens, the time and feed you save, not counting the extra egg yield—more than pays the cost. This feeder will feed anything from whole corn to millet seed—it cannot clog—it is rat and sparrow proof—go away whenever you want to, you need not worry; the chickens will be fed correctly—in fact, this feeder is perfect in every way.

Bear in Mind

the world's leading poultry authorities recommend the use of properly constructed automatic poultry feeders — our guarantee of money refunded if not satisfied, is your proof that this feeder is properly constructed.

BUILDING MATERIAL PRICES

Never again will such remarkably low prices exist. Don't delay—send your order at once. Act now.

ROOFING

Corrugated STEEL ROOFING

1¼c Per Square Foot

Here is the chance of a lifetime to buy the best roofing in the world, at a mere fraction of its real value. Our enormous buying power enabled us to pick up for spot cash a stock of this brand new, perfect corrugated, "V" crimped and Standing Seam Roofing and Brick Siding, at a tremendous sacrifice—'way under what it is actually worth. Immediate cash needed made possible this purchase. Just another chapter added to the long list of our famous bargain sales.

Corrugated STEEL ROOFING

Practically Indestructible

There is nothing else that compares with corrugated steel roofing for real protection. It makes a long, lasting roof. Is fire, rain, frost, wind, sun and lightning proof—warmer in winter—cooler in summer; and under ordinary circumstances does not leak, rot or warp, neither does it taint rain water. You can depend upon it that Corrugated Steel is the best material for roofing, siding and ceiling.

At 1¼c per square foot, we furnish our grade CE-700 Steel Roofing, in sheets 22x24 inches x1¼ inches. This price is delivered on board cars at Chicago.

Galvanized STEEL ROOFING

2¾c Per Square Foot

Another big Steel Roofing Bargain. Several thousand squares of the very highest grade specially coated, corrugated, galvanized roofing and siding, made of specially prepared steel, of superior quality. Best roofing and will last indefinitely. We'll furnish it in suitable lengths for any purpose. Only a limited quantity on hand, so we urge you to send us your order immediately. Don't wait to write us again—order today, while this stock exists. Price only 2¾c per square foot, and will outlast 4 to 1. Just drop us a line, and tell us the size of your studding and general facts, and we will help you to select proper sheets. If you are not ready to use the material now, we will reserve it for future delivery, if you will give us a small deposit on account. This price of 2¾c per square foot is for our Lot CE-800 corrugated material, and is delivered on board cars at Chicago. If you prefer some other style, we will furnish it. We have this same grade in "V" crimped, Standing Seam and Brick Siding. Samples on application.

Ready Roofing With Supplies

62c Per 108 Square Feet

We have several thousand squares of a superior quality Ready Roofing, which we are offering in our AJAX BRAND, 1-ply, at a price of 62c per square of 108 square feet, including necessary cement and caps to lay it. This is undoubtedly the most remarkable bargain ever offered in Ready Roofing. This famous brand is put up 3 or 4 pieces to a roll.

The price of 62c per square of 108 square feet is loaded on board cars at Chicago. We will, however, make a freight prepaid price on this same grade of roofing, including nails and necessary cement of 85c per roll of 108 square feet, and at this remarkably low price

We Pay the Freight

in full to any point east of Kansas and Nebraska and North of the Ohio River.

We will also furnish 2-ply, at 90c; 3-ply, at $1.05.

This Ajax Roofing is guaranteed to wear as long and give as good service as any Rubber Surface roofing on the market.

SEND FOR SPECIAL ROOFING CATALOG AND SAMPLES

Write at once for our Special Roofing Catalog. Free samples and full instructions for laying roofing.

Chicago House Wrecking Co.

Now operated under the name of Harris Bros. Company.

For 22 years the Chicago House Wrecking Company has been well and favorably known to the public. During all these years the four Harris Brothers have been the executive officers and owners, and for that reason have finally decided to operate under the name of HARRIS BROTHERS COMPANY.

There is no change in our business, except that in the future the four Harris Brothers will advertise and sell their goods heretofore advertised and sold under the name of Chicago House Wrecking Company, under the name of HARRIS BROTHERS COMPANY.

Our Guarantee

We guarantee absolute and complete satisfaction. There is no half way about this guarantee. Every purchase you make from us will be exactly as represented, and you will be satisfied in every way, or we will make such just amends as are within our power. We will take back any unsatisfactory article at our freight expense both ways and refund the purchase price. We refer as to our responsibility, to the publisher of this or any other publication, any bank or express company, and to the public at large.

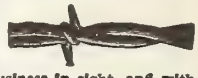
LUMBER

Complete houses and barns at an enormous saving. Never before in the history of Building Material has such an opportunity existed. We offer high grade, brand new complete lumber and building material needed for the construction of houses and barns at lower prices than ever before.

20,000,000 Ft. of New Lumber at Our Yards and Warehouses ready for Quick Delivery

We have upwards of twenty million feet of first class, brand new lumber for the construction of buildings of every kind. A wonderful stock of the very finest millwork, interior trim, etc.—enough material to construct cities and villages everywhere. It is our determination that 1914 will be the "Banner" year in the history of our Great Lumber and Millwork department, and the way we will accomplish this, is by quoting prices that undersell any possible competition. The proof of this is in our catalog and literature.

Write today and tell us what you contemplate improving or building during this Spring—talk to us plainly, and we promise you the advice straight from the shoulder. No other concern in the world is equipped such as we are. Right in our main yard and warehouses, at Chicago, we can load you out complete, at one time, and in one carload, every single article required for the improvement of the building you have in mind. No where else can you go and get such service.



Personal Service To You

You can get the kind of service that will give you absolute satisfaction—satisfaction from the word "go." If you have ideas of your own as to the kind of building that you want, we will give you the benefit of the Greatest Architectural Department in the world. Will furnish you with plans according to your own ideas, and will quote you a price on the material that will make you a wonderful saving. Dollars saved are dollars earned.

Write today for our *Book of Plans* and Latest *Catalog of Building Material* and Supplies.

FENCING

Brand New WIRE FENCING Less Than 1 cent Per Running Foot

Biggest of all offers of the past. We come to you with the most wonderful proposition ever known, and offer you the very best woven wire fencing at a fraction of its real value; lower in price than ever before, notwithstanding that all other merchants and manufacturers have advanced their prices on fencing. We are determined to simply get all the business in sight, and with that in view, we bought up from manufacturer's sales, 150 carloads of High Grade Woven Wire Hog, Cattle, Field and Poultry Fencing, Barb Wire and Nails, in quantities sufficient to take care of our regular customers and those who will quickly respond to this advertisement.

Barb Wire Less Than 2c Per Rod

Galvanized, two-point Barb-Wire, full weight (not the light kind) put up regular on spools, containing about 100 lbs. to a spool. It is made of No. 12½ wire, with good weight barbs. Price per 100 lbs. during this sale, only $1.95. Order by Lot No. CE-600. Several thousand spools of this Barb Wire, Painted, price per 100 lbs. $1.75. Order by Lot CE-500. Also have in stock 1000 spools of light weight, new galvanized barb wire, put up 80 rods to the spool, made of No. 14 galvanized wire No. 15 barbs, barbs 5 inches apart; price per spool of 80 rods $1.45. Lot CE-400. We also have several other bargains. You never had a chance like this before, and we advise that you send us your order today. Don't wait until the material is sold—we cannot hold this quotation open.

GALVANIZED HOG FENCING AT A MATERIAL REDUCTION IN PRICE

100,000 rods of 26 in. Galvanized Steel Spring Wire, 26 in. high, hog fence, put up in 10, 20, 40 and 60 rod rolls, made with 7 bars, spaced 12 in. apart, with No. 9 top and bottom wires, No. 11 intermediate wires, heavier than the regular fencing offered. Price per rod, during this sale, only 15c. Order by Lot CE-900. Same fencing spaced 6 in. apart, per rod during this sale, only 21c. Order by Lot CE-1000. Other heights at proportionately low prices.

High Grade Poultry Fencing 48 in. High PER ROD 27c

A complete stock of all heights of Woven Wire Fencing for every purpose. Do not delay your order, but send it in at once, even if you are not ready to have it shipped. We will hold the material ready to deliver when you want it.

Smooth Galvanized Wire $1.00 per 100 lbs.

Sold "as is," as near as possible one guage only to the coil. Our price of $1.00 per 100 lbs. is in lots of 1000 lbs. Where ordered in other quantities our price for gauges 9 to 12 per 100 lbs. $1.25. 16, 17, 18 gauges, $1.45.

SOME BIG BARGAINS IN NAILS

At last we have the bargain of bargains. 10,000 kegs of genuine galvanized wire nails; will outlast all other kinds. Put up in regular kegs. Price per keg of 100 lbs., as follows:—

10 pennyweight, $2.00	8 pennyweight, $2.10
6 pennyweight, $2.15	Shingle Nails $3.00

Also 5,000 kegs of Nails, mixed all kinds in a keg; good assortment, handy to have around your workshop. During this sale only, per 100 lbs., $1.38. Order by Lot CE-1100. We have other bargains in nails.

Also, in the same job, we have 5,000 kegs of Fence Staples, galvanized, per keg, $2.00. Lot CE-1400.

Crimped wire for reinforcing, cut to any desired length; per 100 lbs., $2.00 Lot CE-1300.

We have bargains in every line. Write us today for our Wire and Fence Catalog, but the best thing for you to do is to send your order now, and we will hold for shipping instructions.

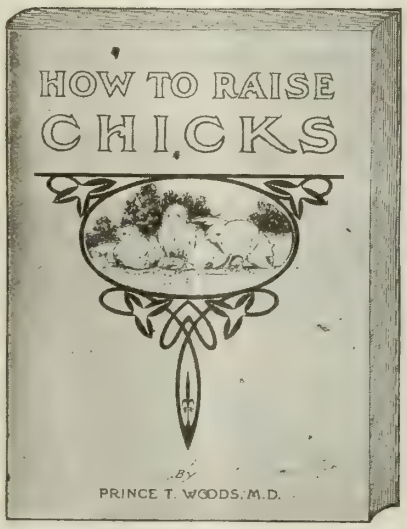
The Home That Was Built by Hens

A Practical Poultry Story, by "Uncle Cal" Stoddard

An unusual book, so different from any other now in poultry literature that it is in a class by itself.

BASED on actual facts and told in a breezy manner, it appeals immediately to the reader. It is not a story about poultry alone, but we are certain that the reader will absorb more practical information from the pages of this book than he could obtain from any text book published exclusively on poultry. The story tells the actual facts of how the poultry business presented unheardof opportunities for a foreman in a foundry, who after serving his company for many years had been discharged, and how in a very short time he built up a business that netted him a bigger salary than he ever earned before. The appendix in the book gives complete feeding formulas, symptoms of and remedies for poultry diseases. This part of the book alone is worth dollars to anyone keeping a few fowls.



Handsomely illustrated by Leonard K. Stahmer, son of Louis A. Stahmer, the well known poultry artist, makes it a book which everyone ought to have in the library.

DR. PRINCE T. WOODS' NEW BOOK

How to Raise Chicks

INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

A Book for Everybody Who Keeps Fowls or Grow Chickens Whether Beginner or Old Timer in the Field of Poultry Work

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.

75c per copy, postpaid; with American Poultry Journal, one year, only $1.40. Canadian subscribers add 25c for postage, foreign 50c.

1st Young Pen
2d and 4th Hen
Pullets not shown
Special for Best Display

This is the greatest win ever made at America's two Greatest Shows and is ample proof of a superiority of **Aldrich White Orpingtons,** as these birds were in competition with the best from England, Canada and America, including a large strain from Massachusetts and one from the Originators.

At all America's best shows this season the most prizes went to those who raise **Aldrich Strain White Orpingtons.**

Your success as a poultry breeder depends largely upon securing foundation stock or eggs from the best strain of the **Best** and **Most Popular Variety of Poultry**—the **S. C. White Orpingtons.** They are the **Greatest Winter Layers,** mature quickly, making broiler size in eight weeks, and add to these useful qualities their **hardiness, beauty** and **gentleness** and you have the **ideal chicken**; and those breeding **Aldrich Strain** have **no trouble** to **sell** all the stock or eggs they can produce **at good prices,** as the **Superiority** of the **Aldrich Strain** is now acknowledged by all.

We are the largest Farm in the World today making a **specialty of White Orpingtons**; and today Specialists lead the World in every profession and business. How can you expect the best from a breeder handling so many breeds that he cannot perfect any one of them? How can he hope to equal the **Aldrich Strain,** which has been **perfected by several years of hard work,** concentration and experience devoted to this **one variety?** For several years we have devoted **all our time and attention** to a single object—the perfection of the **Aldrich Strain S. C. White Orpingtons,** and we have put **quality first** in perfecting our strain and supplying our customers.

Aldrich White Orpingtons now sell better than any other strain, and our pens are all trapnested and contain **all the Prize-winning males** at this season's shows at **Chicago** and **Madison Square Garden;** and eggs from these pens, absolutely the best ever mated in White Orpingtons are $5 and $15 per setting of 15 eggs.

Send for our beautiful 60 page Catalogue with color plates and let us quote you prices on stock, or book your order early for eggs.

The Successful Rearing of Young Chickens

What to Do with Baby Chicks—How to Make Them Thrive and Grow—Seasonable Suggestions for Work with Small and Large Flocks.

By Prince T. Woods, M. D.

COMFORT for the chicks is the keynote of successful chick rearing. We assume, of course, that the eggs used for hatching were out of sound, healthy breeding stock, fresh-air housed; bred, fed and managed for maximum constitutional vigor; also that the chicks were well hatched, whether by artificial or natural methods. One can not expect much success in chick rearing unless the chicks are well bred and well born. Poor conditioned parent stock and poor or faulty hatching is a tremendous handicap and does not give the brood a fair start in life.

Every good, fertile egg from sound breeding stock will not hatch, but the majority of the eggs, those containing the best chicks, will hatch. Whether you hatch the eggs under hens or in an incubator, you are bound to get some chicks dead in the shell. A good deal depends upon the season, the number of eggs being produced, and the way they are kept before incubation, the number of eggs incubated, and on conditions during incubation. Don't expect too much; try to be satisfied with a fairly good percentage of liveable chicks. A friend of ours making a two-year test with both artificial and natural incubation, carried on right through the year, found that natural hen incubation averaged seven chicks to the sitting of thirteen eggs and that with incubators he averaged fifty chicks per 100 eggs. He was an expert at both methods.

Every well-hatched chick will not live to marketable maturity. There will always be a small percentage of mortality. You may raise all the chicks in some broods, but if you grow many chicks you cannot expect to raise all the chicks in all broods. With good food, good care and good management, if the chicks are well born and well bred, you can keep the loss within 5 per cent when operating under reasonably favorable conditions. There is usually less mortality among small broods than among large ones. The more birds you put in one flock or brood the greater the risk. It takes some time to get good eggs for hatching and then three weeks to get the chicks. Loss of that time and the chicks may mean the loss of the best profits of the season. For that reason we would rather do a little more work and run a little less risk. Big broods may save a lot of labor, but to put 1,000 to 2,000 chicks in one brood is a pretty big gamble; if you win you make good, but if something goes wrong you may lose a great deal and with no chance to make it up until another season.

Comfort for the Chicks.

We named chicken comfort as the keynote of successful chick rearing. It means a good deal. The chicks are to be kept comfortable at all times; well brooded, neither too hot nor too cold; well fed on wholesome food; clean water to drink; clean quarters; no crowding or "milling"; no rough handling; opportunity to exercise in the open, and good care and management all the time. Every brood of chicks is not like every other brood out of eggs from the same stock. You will find that every brood differs somewhat from any other. Make each brood, the comfort of the chicks themselves, your guide in handling them. Keep them comfortable, well fed and happy.

Don't think that you must have a fixed, ironclad rule that must be followed with every lot of chicks. The man who cannot recognize chicken comfort and who cannot adapt his routine methods of handling broods sufficiently to meet different conditions or special emergency cases has no business to try to grow chicks. Chick rearing is not purely mechanical and it requires a reasonable amount of hen sense. Study the broods and let them be the guide.

We recall a certain operator who depended a good deal on hired help; he made hard and fast rules about feeding and quantity of food. In moving about some flocks being finished off for market, two pens (either accidentally or because there did not happen to be room elsewhere) got a double number of chicks, nearly twice as many as were in the other finishing pens. About 2,000 were being given the last three weeks' finish feeding before marketing. No one noticed the extra number in these two pens and feeding went on by rule as before. When killing time came things ran along smoothly until the doubled-up pens were reached; then a howl went up from the pickers, and investigation showed nearly 200 thin, half-starved chickens in the doubled-up pens that had for three weeks been getting only just about enough food to keep them alive. With a little more observation on the part of the attendant and a little consideration for chicken comfort a mishap like that could not occur.

Food for the Chicks.

There are a number of good chick foods on the market. Good, if you get them from new, fresh milled stock that has been properly handled. In chicken time cracked grains spoil quickly and even stocks of well-cured corn may prove troublesome.

Spoiled grain is never safe to feed. Spoiled cracked grain mixtures kill chicks by the thousands every year. The greatest danger is in spoiled corn—corn affected with "green heart," a disease of the corn germ brought about by careless curing and improper handling. "Green heart" corn is poisonous and will kill chicks. Good, sound, crib-cured corn of No. 1 or No. 2 grade, and preferably well-kept old corn, is best for use in chick foods. Don't imagine that because grain has been kiln dried that it is any safer to feed. If the grain was spoiled, or beginning to spoil, before kiln drying it is just as poor food and just as unfit for food as it was before drying. Kiln drying does not lessen the danger or get rid of the poison; it merely stops the spoiling for the time being and gets rid of excess of moisture; it will not improve the quality of poor grain.

Don't accept cracked grains, or cracked grain mixtures, if any of the contents look greenish, bluish, or smell or taste moldy, sour or musty, insist on bright, new, fresh goods that

Photo No. 1.—For success in chick rearing get your hatching eggs from sound healthy breeding stock, fresh-air housed; bred, fed and managed for maximum constitutional vigor. A Woods' house in the woods.

are sweet and wholesome. Never feed spoiled grains. Observe care in handling and keeping your supply of grain foods to avoid having them spoil on your hands in chicken season.

Because the quality of the grain is so important, and because we have experienced so much difficulty in getting cracked grain mixtures good enough to suit us, we prefer to grind our own chick food for home use. We like to have it fresh ground as needed and not over a week's supply on hand at one time. Where the flocks are large, it is comparatively easy to do all grinding and cracking of grains with a power mill and gasoline engine. The small flock poultry keeper will find a hand power grinding mill adapted to his needs and will find grinding hard work, but we think that it pays.

Home Ground Chick Foods.

There are four grains that are really essential in chick rearing: Indian corn, preferably one of the small kerneled, yellow flint varieties, cured first on the stalk and then in a roofed crib; only good, sound corn should be used. Good milling quality wheat, hard variety preferred; the wheat must be sound and sweet; don't use screenings. Heavy white, Northern-grown "clipped" oats; get well filled, fat grained oats, the kind that will weigh from 38 to 42 pounds to the struck bushel. Good, sound, heavy, well filled barley; insist on clean, first quality barley and don't take the common damaged sort. See that all of above grains are sound and sweet, free from any trace of mustiness and clean, with little or no dust. Your success with young chickens depends a good deal on starting right with wholesome food; you can't keep them comfortable with poor food.

A good chick food can be made by grinding together equal parts of corn, wheat, oats and barley. Grind it so that the coarser particles of corn are about the size of "steel cut" or "pinhead" oatmeal. Feed the mixture dry just as it comes from the grinder. It is not necessary to sift out the oat and barley hulls. It is surprising how well little chicks will clean up a fresh ground mixture of this kind.

Oats, ground hull and all, as fine as special oat grinding burrs will grind them, are excellent for chick feeding, fed dry. Barley may be omitted from the food mixture if difficult to obtain a good quality at a fair price, but we like it in chick food mixtures and believe that a combination of oats and barley help wonderfully to keep chicks' digestive organs in good working order.

Another good four-grain combination for chick food is: Corn, one-half; wheat, one-fourth; oats and barley, each one-eighth. Parts by measure. Mix all and grind together to desired size for feeding. Another is: Corn, 50 pounds, wheat, 18 pounds; oats, 16 pounds; barley, 16 pounds. Mix and grind together. Vary the size to suit the age of the chicks, or grind whole to flour fineness and feed as a dry mash. Other chick food formulas will be found in the book, "How to Raise Chicks." (See book announcements in this issue.)

Wet and Dry Feeding Both.

Rolled oats are good as a starting food for small chicks. We feed them plain and dry, or mixed with dry ground mixtures. Sometimes mix them with ground bread crumbs (baked dry) and moisten into a crumbly mash with either sweet or sour milk.

In using milk for small chicks, use it either always sour or always sweet. Don't alternate sweet and sour milk feeding unless you want to start trouble. We believe the best use to make of milk for chick feeding is to sour it and then make curd or cottage cheese and feed that to the chicks as a variety food. Mix the whey with some good mash mixture and feed it to the adult fowls.

The basis of our chick feeding is dry food. Moist foods are only fed as a variety ration; the staple diet is mixed grains, ground and fed dry. The fine ground foods are fed from a trough or hopper and kept always before the chicks. Where automatic feeders are used for scattering chick food in litter the ground mixtures must be sifted and only the coarse particles used in the feeder. Feed the fine stuff in an ordinary hopper or trough. To sift the chick food is easy. Simply make a long wooden trough and fit the top with a screen of copper wire netting such as is used for mosquito screens. Place this at a sharp incline beneath the spout of your grinding mill and arranged to discharge the coarse grains into one bag and the meal into another. Gravity will do your sifting, quickly, as you grind. Small chicks will work automatic feeders satisfactorily when three days old and it is a great help in feeding large flocks. Best quality beef scrap can be sifted and chick-size particles fed in automatic feeder mixtures if desired.

Well boiled rice (get a good quality of unpolished cracked rice or some small grained rice) is an excellent variety food during the first ten days, as is also the combination of rolled oats and bread crumbs, milk moistened, mentioned above. Rice should be washed in cold water before placing to boil. Season with a little salt and cook in a double cooker until thoroughly done and all water absorbed. Let it cool before feeding. During first week a little hard boiled egg (use infertile eggs tested out of incubators, but not those from under setting hens) makes a good addition to the ration. Mash it up, shell and all, or cut in halves and let chicks pick at it.

Beef scraps, if good, may be fed from the beginning, but we like best to hold off on scrap until after the first week. Fresh fish, scalded, is relished at any time and is good food if you don't overdo feeding it. Bugs and worms are natural meat food for chicks and the sooner they get a chance at them the better.

Photo No. 2.—Individual out-door brooder flocks can be successfully grown out of doors in cold February weather. This brood was. See Dr. Woods' book "How to Raise Chicks." A bank of earth from brooder door to ground is the easiest runway for chicks to learn to use.

Raw potato, cut and fed in chunks, is eagerly eaten and relished, and is good for chicks from the start. Grass and grain sprouts chopped fine are good. Chopped dandelion leaves make a good tonic green food. After chicks are ten days old they will take sprouted oats just as they come from the sprouter. Feed sprouted oats when the sprouts are about an inch long or under that.

Coarse sand, fine ground oyster shells, kiln dried granulated raw bone, charcoal, and clean drinking water, keep where chicks can have access to them at all times. (Chick feeding in more complete detail is taken up in the book, "How to Raise Chicks.")

Rearing Chicks With Hens.

There are many good brood coops for hens and chicks. Choose one that suits your own fancy and convenience. We prefer to confine the hen close to the coop and to let the chicks range. Unless your chicks are all of a size and one color, don't get brood coops too close together. A mother hen is often most murderously inclined toward any but her own chicks. Where a number of coops just alike are used, it is well to have some distinguishing mark or color for each coop. The chicks will quickly learn to identify their own home and keep out of trouble.

Locate the brood coops in a sheltered place or provide shade so that the hen can have comfort. Give her a small yard in front of the brood coop and have a slatted front for same for convenience in feeding. Feed and water both hen and brood outside this yard, so that she cannot scratch everything about and waste food. Place food and water where the hen can reach it comfortably through the slatted front. Arrange brood coops so that you can attend to your flocks without wasting steps or time. As yards and farms differ so much, every poultry keeper will have to decide on the easiest way for his particular location. An arrangement that might be good for one would in all probability be inconvenient for another worker. We don't believe in wearing deep ruts and keeping in them.

Keep brood coops clean. Mites abound in some localities and are more troublesome some seasons than others. Red mites live in the woodwork of the coop and feed on the blood of the hen and chicks. They are nearly colorless when empty and hungry; it is the blood of your birds that gives them the bright red or dark color. Mites will kill brood hens and their chicks if allowed to multiply. Pigeons and sparrows help to spread mites over the plant.

A good remedy for mites is a spray mixture made by dissolving one pound of naphthalene flakes in a gallon of kerosene. All of the flakes will not dissolve, but you want an excess to make sure of a saturate solution. Apply to the woodwork with any good hand spray pump.

Lice are less dangerous than mites, but are very troublesome. Usually the mother hen is the chief source of lice. Dust her thoroughly, down to the skin all over, with a good lice powder and repeat the operation in ten days. The best lice powder we ever used is pure, fresh ground Persian pyrethrum (Persian pellitory or Persian insect powder.) It usually costs 30 cents a pound in bulk and is not good unless pure and fresh. Commonly it is heavily adulterated. If good and pure, two thorough applications ten days apart will get rid of lice for several months. The cheapest, effective lice powder is tobacco dust. In some sections this can be bought at a very low price from dealers in tobacco products.

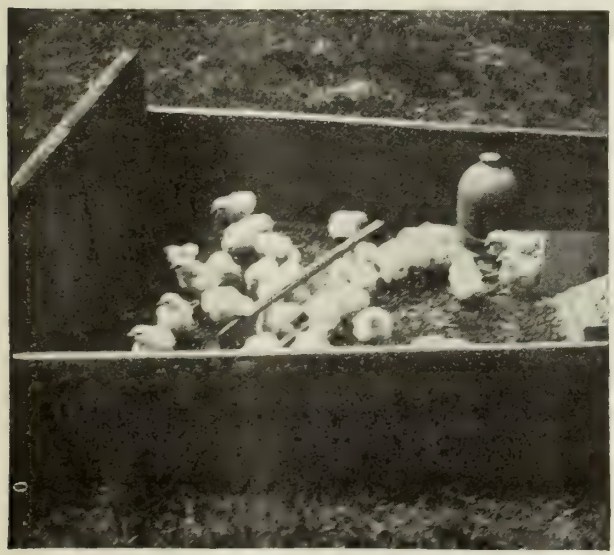

Photo No. 3.—Boards make good wind-break runs for the first outings of brooder chicks. (Photo by Dr. Woods.)

Photo No. 6.—Light Brahma brooder chickens working an automatic feeder on a Massachusetts market poultry plant. Twenty such feeders in this orchard successfully fed 1,000 chickens. (Photo by Dr. Woods.)

A good brood hen can comfortably care for from fifteen to thirty chicks, according to season; and we know of a few poultrymen who, in mild weather, have made one hen care for a brood of sixty chicks. In such large broods it is difficult to keep the chicks comfortable and the loss is greater.

Baby Chicks and Brooders.

Baby chicks do not require food until from 36 to 72 hours after hatching. Just after hatching they are most in need of warmth, rest and let-alone treatment. The best place for them is in the nest in a darkened incubator (not too tightly closed), or in a good day-old chick shipping box. One reason that day-old chicks stand shipment so well and do so well is they are taken direct from the incubator and placed in the shipping box without food. Twenty-five of them in a compartment are quite snug and comfortable, and they get mostly let-alone treatment until they arrive at destination. Transportation does not bother them nearly as much as would some fussy attendant had they remained at home. Chicks are well supplied with food when hatched. The letting alone during their journey helps them to get into condition to be fed and they arrive ready to be brooded, fed and watered and make a good start in life.

When a newly hatched chicken is ready for food it will set up a persistent, hungry cry that cannot be mistaken, and will keep it up until satisfied. Don't feed them too soon; when thirty-six hours old is soon enough.

If you have ordered day-old chicks be sure to have your brood hens, or your brooders, ready and waiting to receive them on arrival. Don't wait to get ready after the chicks arrive. If you intend to brood the chicks with hens, the hens should have been sitting some time, should be in darkened nests and should not have their new chicks until just about dark. Shut the chicks in the nest with the hen over night. She will usually adopt them if you do this, but if you try to force day-old chicks on her in broad daylight she may turn nasty and kill them instead of brooding them.

There are many styles of brooders: fireless brooders of fibreboard, wood, and metal; heated brooders of hot-air and hot-water types and combined water and air heating. An experienced operator can do very good work with almost any of them. Nearly all of the brooders are over-rated as to capacity (number of chicks they will comfortably care for); just why manufacturers always rate a 50-chick brooder at 100-chick capacity we don't know.

Directions for operating come with all brooders. Fireless brooders will raise good chicks under favorable conditions, but call for a lot of fussy work on the part of the attendant.

Photo No. 4.—Test broods of White Plymouth Rocks in fibreboard cold, or fireless brooders, out for an airing. The brood boxes were kept in a piano-box coop at night. Mortality in this lot of chicks was less than 2%, but they required a lot of patient attendance.

Until he has his broods well started he has to play mother hen and hustle them into the brood box often to warm up and dance attendance on the brood pretty constantly; but for some folks it seems to come easier than tending brooder stoves and lamps. Fireless brooders have to be run in a special brood coop or in an indoor rearing room. Keep all brooders clean, sand floors and use litter of cured cut clover or hay mow chaff and renew often.

Lamp-heated brooders of the out-door type will do excellent work. Some styles can be operated out of doors in February in Massachusetts; and usually it is pretty cold with much zero weather. The directions all give rules as to temperature of hover; we pay very little attention to the thermometer after we have a brooder heated up and running evenly. Run the brooder empty at first with the temperature at 90 degrees; when the chicks are put in it will go up, but never mind that, let the lamp alone. Keep heat enough under the hover to keep the chicks comfortable; even if it runs up to 110 on cold nights. If the chicks are comfortable they will be peeping out from beneath the hover and perhaps wholly outside the edge of it and when found like this the heat is usually just about right, with a surplus to take care of any temperature drop during the night. If the chicks are all in under the hover, out of sight, or if they huddle and crowd, there is not heat enough. You want heat enough under the hover to warm the chicks up quickly and to make them spread out comfortably when they go to sleep.

When operating out-door brooders in winter we have, shortly after shutting up the brooder on a cold night, found the hover temperature at 115, but we made no attempt to lower the lamp flame because it was burning at about the height experience taught to be necessary to go through the night comfortably for the chicks. The brooder had been opened and aired often during the day and had ample ventilation anyway. With such conditions, on below zero nights, the chicks have been entirely comfortable and come along in good shape, yet we have had water freeze in the drinking fountain inside the brooder not more than eleven inches from the outer edge of the hover.

Be sure that your brooder has a cool chamber as well as the warm hover chamber. Preferably put the chicks in the brooder in the afternoon with just about time enough to feed a little while before they go to bed under the hover. Take time to teach them to go under the hover. Repeat the lesson until they learn that under the hover is the place to warm up. Keep them in the hover chamber until they learn to use the hover, then let them learn to use the cool apartment in the same way. Don't let them huddle in sunny or cool corners. If they get the habit of huddling in a sunny corner, they will crowd in that corner some dark cold day from habit and you'll lose. Some broods learn very quickly and others are slow. It pays to be patient and to teach them their lesson thoroughly. When brooder broke teach them to use a sheltered run outside the brooder on pleasant days. Boards make a good wind-proof starting run. Make a little bank of earth from brooder door to ground; it is easier for the chicks to learn to use it than any other sort of runway. Operating brooders is merely a matter of using common sense, being a bit observing and keeping the chicks comfortable. If you take pains to teach the chicks and start them right they will give very little trouble. If you make a wrong start you will be in trouble all the time.

Photo No. 7.—Weaned White Plymouth Rock chickens, housed in piano-box coops on a clover range of a Massachusetts market poultry plant. (Photo by Dr. Woods.)

Size of Brooder Flocks.

The size of brooder flocks depends on the type of brooder used. For fireless brooders 50 chicks should be the brood limit in cold weather and 30 chicks in mild weather. For most types of individual lamp-heated brooders 50 chicks is enough; though some will take 75 or even 100 chicks comfortably. It is a good plan to divide the manufacturer's capacity rating by two and sometimes by three.

Large flock colony brooders of the coal-stove type are becoming popular and require a special room or building. The 600 chick size is just about right for 300 chicks comfortably, and

Photo No. 8.—Nine weeks old White Wyandottes, 2¼ and 2½ pounds weight respectively. Grown on dry food ration. (Photo by Dr. Woods.)

the 1000-chick size will do better with 500 chicks than with full capacity; at least so experienced users tell us. For brooder house broods where hot water or combination hot air and hot water systems are used, 100 chicks is about right for a brood unit.

Keeping Out of Trouble.

Keep your chicks comfortable, give them good care, plenty of water, greens and a variety of good wholesome food and you will keep out of trouble. Don't let the chicks get very hungry. If you are forcing them for market growth with forced feeding methods, watch them carefully. Indigestion and intestinal irritation are the commonest troubles. The chicks get weak in legs, wabbly, droopy, or have fits. Should trouble start, first stop feeding. Try to find the trouble and remove it. Fasting for a few meals won't hurt the chicks. Before giving them regular ration again keep them for a few days on a diet of scalded milk thickened to consistency of cream with well-boiled flour and seasoned with just a little salt, nutmeg and ginger. Return to the regular ration gradually.

Well-boiled flour is prepared by putting good white bread flour in a muslin sack and tying it up tight close to the flour; then plunge in boiling water, keep well covered and boil vigorously for six hours. Take out the ball of hard-boiled flour and finish drying in the oven, but don't scorch it. Pound this up to thicken the scalded milk.

Sickness from feeding on spoiled or soured food can seldom be remedied in time. Feeding too much wheat and cracked wheat will sometimes cause sour or puffed crop. Prevent such troubles by good management. White diarrhoea is a disease which comes from the parent stock. It is discussed in detail

in "How to Raise Chicks." White diarrhoea broods will start to die off by the second or third day, be going like sick flies by the sixth day and most of those that are going to die will be gone by the tenth day. Those that live, from such broods, are not fit to keep. They should be killed as soon as they reach marketable size. Pullets reared from white diarrhoea flocks will have diseased ovaries and if they lay, their eggs will hatch white diarrhoea chicks. Stop the trouble at the fountain head.

Brooder chicks are ready to be weaned when six weeks old as a rule; sometimes a week or two older in extreme cold weather.

Discussion of Miscellaneous Poultry Topics

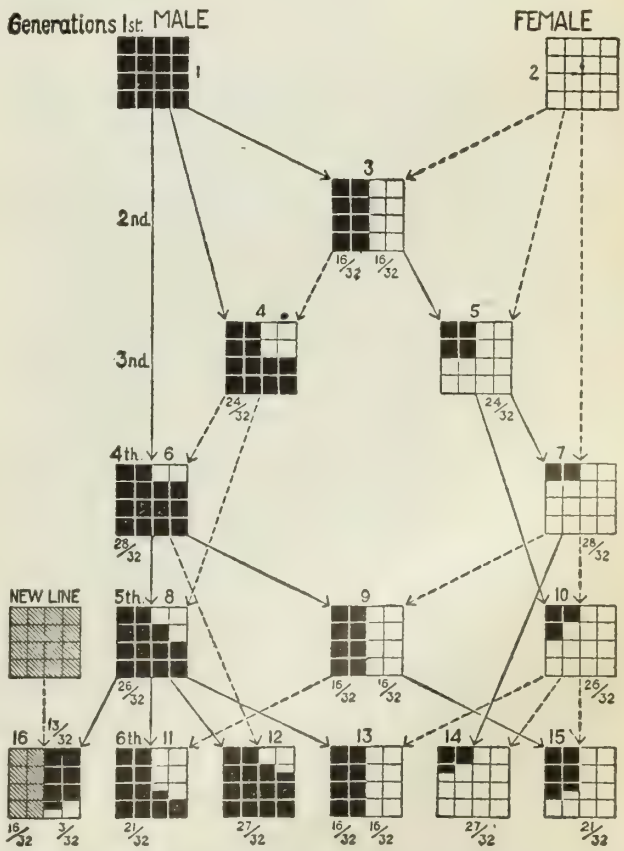
Handling Green Food. Using Power and Factory System on an Egg Farm. Wet or Dry Mashes. Balancing Foods. Parcel Post. Breeding Charts. *By H. H. Stoddard*

IN PREPARING and feeding cut green stuff, when there are some thousands of laying hens to be supplied, and the yards are on the convergent plan, there is much room for invention.

It was at first suggested that building containing engine, vegetable cutter, and pumping fixings for automatic watering, be located at or near the inner court so as to carry out the basic idea of having all the work possible performed or controlled at central headquarters,—"save steps" being the motto from a to izzard.

As the engine to pump water for the elevated tank to supply pressure for the watering apparatus will be run intermittently, it would be inconvenient it would seem, to have to go some distance to start it or stop it. Again, since the granary is in the court, suppose your engine runs a grinder to crack corn, that you are bound to have fresh and absolutely perfect for your young chicks; would it not seem very handy to have the grinding apparatus close to the granary itself?

But here arises the consideration that the chopping and distributing green stuff involves the biggest job on the egg ranch. True, much can be done by harrowing in oats in sundry patches in various parts of the ranges, and Bermuda grass plots, under the Skinner system, as previously described, and the utmost ingenuity exhausted in every sort of vegetable available in this region, to enable the birds to graze. When they harvest and chop their own vegetables that is surely the way of the greatest labor saving of all. But young chicks must have greens finely cut and delivered to them, and probably this will apply to all immature stock of different stages of growth, so, as I have said, the green stuff branch involves the biggest labor bill on the farm.



Now it will be seen that location of engine and chopping machine is of more importance than location of other apparatus because of the great amount of labor connected with green stuff. Place it with pump, elevated tank and all the paraphernalia, at the butt end of the convergent yards instead of at the inner court and have it on the side nearest three things, to-wit: dwelling of the attendant, "sass garden" where green stuff is raised, and stable of team, or garage, if horseless plan is used. Then you can haul the stuff from garden to chopper with the minimum of travel, and haul the chopped material, not to inner court, but around the outside of the whole group of convergent yards, to be fed there on the four or more ranges, the team or auto not to enter the yards at all.

True this will make the trip to distribute chopped stuff a long one, but it cannot be helped. Having retained lots of work at the inner court you must be content to waste considerable time on traveling for this particular job. Consolation—you ride. No walking about it and as nearly every other blessed thing you do is on foot, a change is good for you. The stuff must not be fed in any sort of box or hopper. It must be scattered widely so that all may have a chance, and several times a day all that they will clean up quickly, so that none will be wilted and wasted. If you can have a strip of permanent Bermuda sod running entirely around the outside of the system of yards and maintained intact, on which the stuff can be scattered, this will do first rate. But such a patch will probably become so dirty and scratched to pieces that you will have to resort to quite extensive floors of boards, which must be slightly inclined so that rain will help wash them clean. Your main dependence for cleanliness will, however, be the use of hose, the strong pressure from elevated tank proving of great value. You will not dream of so foolish a step as scattering the stuff by hand or using any sort of fork, scoop, or shovel. The manure spreader will be the ticket, but there must be a slight alteration from the usual form. The driver on his restful ride, from the engine house entirely around the whole yard system, back to starting point, need not leave his seat.

Now, the reader will notice how machinery does it all, or nearly all. The drinking water for the fowls is elevated by power, greens harvested and loaded, chopped and distributed by power.

Machinery and power, all the essentials all the way through. It is not Auntie feeding by hand out of a pan at the back door steps. It isn't carrying on business in any puttering nineteenth century way of poultry management.

Gasoline to make all this power costs something, you say. Yes, and it is a mighty poor sort of a factory that can't afford the cost of the power that runs it. Egg farming must be by machinery, on the factory system, the raw material being chiefly purchased grain, and the finished product consisting of perfect eggs.

An impossible breeding chart. The qualities of sire and dam do not descend to progeny in any exact proportions that can be foretold, as such charts would seem to indicate. See article, "Machinery on Up-to-Date Egg Farms."

When a nation gets its poultry products by aid of machinery, using stock bred by proper mixtures of blood, hatched from eggs that were laid by fowls fed all the time all they

FIRST PRIZE COCKEREL COLISEUM CHICAGO SHOW
DEC. 1913 BRED AND OWNED BY
FLANDERS WHITE LEGHORN FARM. ORCHARD LAKE MICH.

want of the unmixed kinds they want, in the form they want it these products to reach the consumer from the producer direct, largely by parcel post, no pestilent middlemen intervening, when that time arrives, national wealth will be created "beyond the dreams of avarice."

Wet or Dry Mashes.

Moist mash not only makes too much work but that which is left over may become sour. If it is in an open box the fowl's feet make a bad mess of it. If in a hopper or slatted trough, or any contrivance whatever, that will keep them from treading upon it, then this contrivance is difficult to keep clean and sweet. On the other hand, if the mash is dry, they avoid it in this climate. So perhaps whole wheat is the proper caper in spite of the high price.

Quite a little arithmetic is necessary in finding how much more expensive whole wheat is than wheaten mill stuff. It has appeared to me sometimes that you can get more nutriment for your money in shorts than in bran and so I mix either two or three parts of the former to one of the latter, in spite of the fact that this proportion makes the mixture pretty sticky.

Now the stuff is supposed to be sufficiently near the feeding value of whole wheat, pound for pound, for practical purposes, and you are ready to figure what a pound of it costs at the price you have been paying and compare it with the cost of a pound of wheat in your market.

Probably you will find that the price of six pounds of whole wheat (milling wheat I am talking of, for I would not use what is called "feeding wheat"), will buy about seven pounds of the mixture above described.

By the time you have mixed and fed your moist mash and later puttered around to see if you had given enough or too much, and had removed the left-over mess or given a little more where needed, and cleaned up and kept everything in apple pie order, you would have used up an amount of time which if spent in raising an additional lot of pullets and tending them later as layers would have bought the additional pound of wheat. Get the angle?

But now arises an important question which the experiment stations have done some work on, but not enough to be fully conclusive, to-wit: Is some ground food necessary to the higher profit? If it is all whole, can they digest it fast enough?

The fondness which fowls have for whole grains, in fact for almost anything that is hard and smooth, is suggestive. Try a flock of young chicks with a panful of sifted cracked corn of just the right size for their age, and they eat it with avidity. Grind the same thing exactly to a fine powder and they take to it reluctantly and only when impelled by hunger. Yet no seed of mustard, grass or weed is rejected on account of its size, no matter how small it is, so long as it is smooth and hard. If it has a hard shell on it goes down like shot off a shovel. If it does not stick to their tongues it is all right. Watch hungry adult fowls swallowing whole wheat, or hungry wee chicks devouring millet, and notice the extreme rapidity with which the tongue seizes a particle, lifts it to the swallowing part of the throat machinery, disengages it like lightning and returns for another load! Just so sure as the aliment is in the form of a scale, like bran or other ground stuff, instead of a pellet like a seed, it sticks like a burr to wool and the bird evinces disgust. It can't work fast enough. Am reminded of a banquet given by the Connecticut State Poultry Society once on a time. It was the most sumptuous and formal "feed" I ever sat down to, and lasted an hour and a quarter. There were not enough waiters to serve the numerous and elaborate courses promptly, and in an interval a fancier near me said: "Gosh! a fellow will starve to death between the acts." The chicks not only take much time between acts swallowing dry scales, but there is apparently something else. They have not sufficient saliva to lubricate dry powdered stuff. They are not built that way and don't know how to run to a water dish between mouthfuls, as a duck does. In brief, dry pulverized stuff is, I believe, unnatural and therefore wrong.

I have at present on trial one hundred and fifty chicks closely yarded and supplied with green stuff, buttermilk, grit, charcoal, cracked corn, water, and not a mite of anything else excepting dry wheat bran in an open shallow box. During three weeks, the whole boodle of 'em haven't eaten enough of it to support one cockroach.

The Balancing Business.

Corn or else seeds of the non-saccharine cane you must have to afford the carbohydrates and fat, and these can be fed whole readily enough. But when you want a highly proteinous

FIRST PRIZE COCK AT CHICAGO COLISEUM SHOW
DEC. 1913 BRED AND OWNED BY
FLANDERS WHITE LEGHORN FARM ORCHARD LAKE, MICH.

grain, too, wheaten mill stuffs come to mind at once. Bran-shorts, low grade flour, red dog, middlings, or whatever name is applied. But feeding these in wet mash violates every canon of labor saving and when dry they stick in the fowl's

throat. If you limit poultry, young or old, to such wheaten food, or highly proteinous grain material as they will swallow finely ground, and in dry form, they won't take protein

enough to fully balance up; that is all there is about it. They will go back to their corn and eat more of that than they ought to have.

When I say that nature teaches all animals to eat just the quantity and proportions of every sort of food that is best for them, I insist that it must be accessible in a readily available form.

If you feed shelled corn and whole wheat all they will eat for a while and nothing else in the grain line and then throw down a good lot of corn that is firm on the cob, not the loose sort that comes off easily, they will eat some of it, but not anywhere nearly as much as they ought to have to balance the wheat. This you can prove by shelling it for them, when they will go back to the former proportions of somewhere near an equal quantity of each grain. Similarly, if you throw to poultry green stuff with long stalks, rape for instance, and not enough of the leafy portions, they may go for days with insufficient green stuff. Now chop the rape fine, stalks, leaves and all, and let them have all day, fresh and unwilted, all they choose, and other things all they choose, and they will take, to a hundredth part of an ounce, just the quantity of each sort that is best for them.

I have often noticed that many people think that if a needful sort of food is given "once in a while" there will be a sufficient balancing. Not so. I lately told a neighbor who asked me what he should give young chickens that to the buttermilk and cracked corn he was feeding, he should add bran and shorts. Passing by several times afterwards I noticed no cereal stuff excepting cracked corn in the forenoon but towards evening there was wheaten stuff galore. What he should have done was to have bran and cracked corn both before them when first let out of their coops in the morning, while they were hungry. A day is a long time to a wee chick in which growth proceeds with "embryonic fierceness." It is equal to several days of adult life. Therefore, you should never try in the afternoon to feed a chick for the forenoon, neither try today to feed a grown fowl for yesterday.

Feed when they want it, what they want, prepared as they want it, and all they want. This is the golden rule.

More About Parcel Post.

Lest I may seem to have exaggerated, in February issue of this magazine, the great expenses and awkwardness of retail stores, I want to call attention to a device which has been resorted to to lessen the burden of the delivery system, a burden which though apparently borne by the dealer, rests instead on the shoulders of the customer along with bad debts, drummer's commissions, hotel bills, and wholesaler's profits.

In a small city, a county seat in Nebraska, there were six principal groceries and six delivery wagons crossing and recrossing each other from nine or ten in the morning until six or eight o'clock in the evening and sometimes later, according to circumstances. A rush order by telephone sometimes compelled a special trip to carry a trifling purchase to some inconsiderate housewife at furtherest edge of the town.

Now it occurred to somebody, who had a little executive ability, to buy out the six teams and paraphernalia, and contract with the six groceries aforesaid to make three deliveries, two before noon and another in the afternoon. Parties telephoning too late must wait for next trip. The town was divided into six districts, one for each wagon, thus preventing needless travel, and each wagon went to all six stores to load everything for a trip before starting out. Result: everything worked smoothly and regularly, no duplication of travel, everybody served, and no tired horses, late hours and exasperated drivers.

But on the same street were mail carriers with parcels, and wagons with express matter, and hucksters' carts hauling fruit and green stuff, making lines of travel crossing and recrossing, suggesting that a comprehensive parcel post line of wagons might combine all these functions and make enormous additional savings. This uniting of institutions by the vastly improved parcel post of the future is perfectly feasible. The express business, up to one hundred pounds at least, and perhaps more, must be taken over by the government and added to the present parcel post. There should be no attempt to carry any but quite small parcels in bags, as *Pearson's Magazine* and other good authorities have lately shown. Matter such as express companies carry now, should be handled without the use of bags. Then we could mail eggs for either hatching or eating, and poultry either alive or dressed. Goods such as are now expressed should be in one end of a mail car and

mail bags in the other. If the public demand this they will get it. The American Poultry Association should take up this matter right away. I said one end of a car, but this would apply only to the stub line serving Pumpkinville and other

small towns. There would be a whole car or two for the parcels and another for the bags on the line serving the growing city of Enterprizeville, with its numerous rural routes,

whole trains for the still larger Metropolisville, and trains on trains for the biggest cities of all, some for through transcontinental routes and some long trains connecting strings of cities and dropping off cars and taking on others.

The big government P. O. buildings will stand at track yards as extensive and complicated as those at the passenger stations, while the buildings themselves will be of immense size, because our population will soon be one hundred and fifty millions, and soon after two hundred millions; while the number of packages per capita will be more than twenty times what it is now when the mail handles nearly all the goods now sold in retail stores. United States Post Office is at present the largest business institution in the world, and what sort of a marvelous concern will it be when the packages it carries are sixty times as many as the four express companies carry now, plus more than double the letters carried now; for the parcel post will cause a tremendous increase in correspondence. Government architects will have new guesses coming, for the present handsome buildings will become laughing stocks of our children, and monuments of the era when express companies staved off parcel post for many weary years.

Breeding Charts.

If you set apart a pair of fowls and breed from their progeny for generation after generation, crossing aunts, nephews, uncles, nieces, fathers, daughters, mothers, sons, etc., in ingenious interweavings that look very orderly and systematic on paper and are to many people exceedingly seductive, you will never get any new thing though you may intensify the traits which the strain possesses, so claim line breeders. They say that every quality will be shut out that was not in the original pair. And Felch likens the first pair in his chart to Adam and Eve in the midst of paradise. At the end of a few years these birds can be duplicated exactly, and you are in a paradise of success yourself as you start off with another Adam and Eve.

Nonsense! Why, bless us all, innumerable as the stars of the heaven are the individuals of the ancestral hordes way back, and each has a pull on your breeding operations, or tries to have one.

See chart Fig. 1. We are actually assured by breeders who profess to follow this chart, or other charts which are substantially like it, that when, after three generations, you secure birds that are marked half and half on the chart, you have again the same characters you started with. In the diagram the traits of the members of group 9 are said to be the same as the traits of the members of group 3. They are said to possess the same blood. Not so. Nature never duplicates anything. Even the most closely resembling twins are never alike. Of all the sands on the shores since Father Time made his advent, no two grains were ever the same.

The chart and description appear by permission of Orange Judd Co., copied from an excellent book, published by them, date of 1910, by M. G. Kains, entitled Profitable Poultry Production. The solid lines in the chart represent the course of the male blood, and the dots the female blood lines. Suppose a pure-bred cockerel represented by group 1 to be mated to the pullets in group 2. The progeny of this mating would be represented by group 3. The pullets in this group are mated back to the cock in group 1, and the progeny would appear in group 4, as three-quarters the blood of the sire.

The pullets from group 4, when mated to the cock in group 1, would give progeny in group 6, the chicks in which would be seven-eighths the blood of the sire, or practically pure bred as far as utility requirements go. The chart is extended to show how other combinations occur. In group 9, produced by crossing a cockerel from group 6 with pullets in group 7, and also in group 13 produced by crossing a cockerel with pullets in group 10, the result is half breeds as in group 3. Group 5 results from crossing a cockerel in group 3 with the hen in group 2. The progeny in that case would be seven-eighths of the blood of the mother instead of the father, as in group 6. In group 10, the chicks result from a cross of a cockerel from group 5 with pullets in group 7. The reverse of this is the case in group 8. Groups 11, 12, 14 and 15 explain themselves.

Should the introduction of a new line of blood be desired this may be accomplished by mating a hen to a cockerel, as shown in group 8.

All the above looks well on paper. There are thousands of people who think that the "blood" of humans or the lower animals can be mixed in definite proportions, as you would mix black and white paints together. But there is the mysterious "Mendelian law" which may compel in a particular mating the dropping out for the time being of a trait that would seem to be entitled to a proportion of one-eighth or one-fourth or one-half or whatever. For instance, the supposition that groups 3, 9 and 13 in the chart would be just half and half, is wrong. Results would not be that way in one case in ten thousand, for Mendelian jumps and skips, or remote ancestral pulls, or both, are practically absolutely certain to prevent. The only groups of the entire seventeen on the whole chart that are blackened right are groups 1, 2, and the unnumbered candidate of the new line.

LUSTY TOM.

A type of Single Comb White Leghorn male bird combining exhibition and strong breeding qualities, that is produced in large numbers by Yesterlaid Egg Farms Company, Dept. 5, Pacific, Missouri.

Where and How to Advertise Poultry

It Does Not Pay to Spend Money Advertising in Cheap Publications. It Pays to Advertise in First-Class Periodicals Which Interest the Buying Public. *By D. C. Beaty*

POULTRY is the most universally raised live stock, there being no state where there is not more or less interest in poultry breeding. There are, however, many states, especially those of the far west, where there is little poultry raised and not sufficient interest in poultry breeding to make it worth while advertising. In spite of the fact that the United States has such an unusually large poultry industry, advertising in small agricultural papers or poultry magazines, or in local newspapers in some of the states would bring practically no results.

All of the states west of North and South Dakota, Nebraska, Kansas, Oklahoma, and Texas, excepting California, Washington, and Oregon, raise very little poultry, according to the recent census. The number of fowls in each state is shown on the accompanying map.

The large, black circles represent the presence of 200,000 fowls; the circles three-quarters white represent the presence of from 150,000 to 200,000 fowls; those one-half white represent from 100,000 to 150,000; one-quarter white represent 50,000 to 100,000; while those all white, like the one in Nevada, represent less than 50,000 fowls.

Generally speaking, poultry is much more profitably advertised in a first-class poultry paper, because such a publication reaches a class of people definitely interested in poultry breeding. There is also another class of buyers who are more easily reached by advertising in live agricultural papers, which does not mean that the poultry papers do not reach a great many of these people, but the poultry paper being a special class publication, goes principally to breeders who know the value of the best stock, while the agricultural paper caters to the all-around farmer or suburban dweller trade.

There are so many poultry papers published in the United States that many breeders are at a loss to know how to make a selection. To an observer, it seems that about every newspaper man who gets interested in a pen of chickens, considers it a duty to start a poultry paper, with the result that the majority of poultry papers now being published have an exceedingly small circulation.

If the prospective advertiser will take the trouble to sift the matter down, it will be found that there are only a few publications going to poultry raisers exclusively, that have a really worth while circulation. According to a recent report giving a list of poultry papers and showing the circulation of each, there are not more than four poultry papers in the United States which have a circulation of more than 50,000. But aside from this matter of circulation there is another, equally important to the advertiser. A poultry breeder desirous of selling stock, or eggs, or chicks, must advertise his wares in a publication reaching interested parties, and even a fairly large circulation is not always made up of interested persons, especially in the case of the magazine with very low subscription rates. Such periodicals invariably carry a large percentage of "dead heads" on their subscription lists, and the best worded and most elaborately displayed ad recruits few, if any, purchasers from such lists. The old slogan that "it pays to advertise," has been superseded by the new one, "It pays to advertise right."

The advertiser must at all times consider to whom he would address his advertising, for frequently a live periodical in the right locality, with only a comparatively small circulation will reach interested buyers.

In advertising in a farm paper the accompanying map must be carefully used. Papers will pay best that circulate in those states where there is the most poultry. A good agricultural paper, with a circulation of over 50,000 in any of the states of the central west or of the east, would undoubtedly

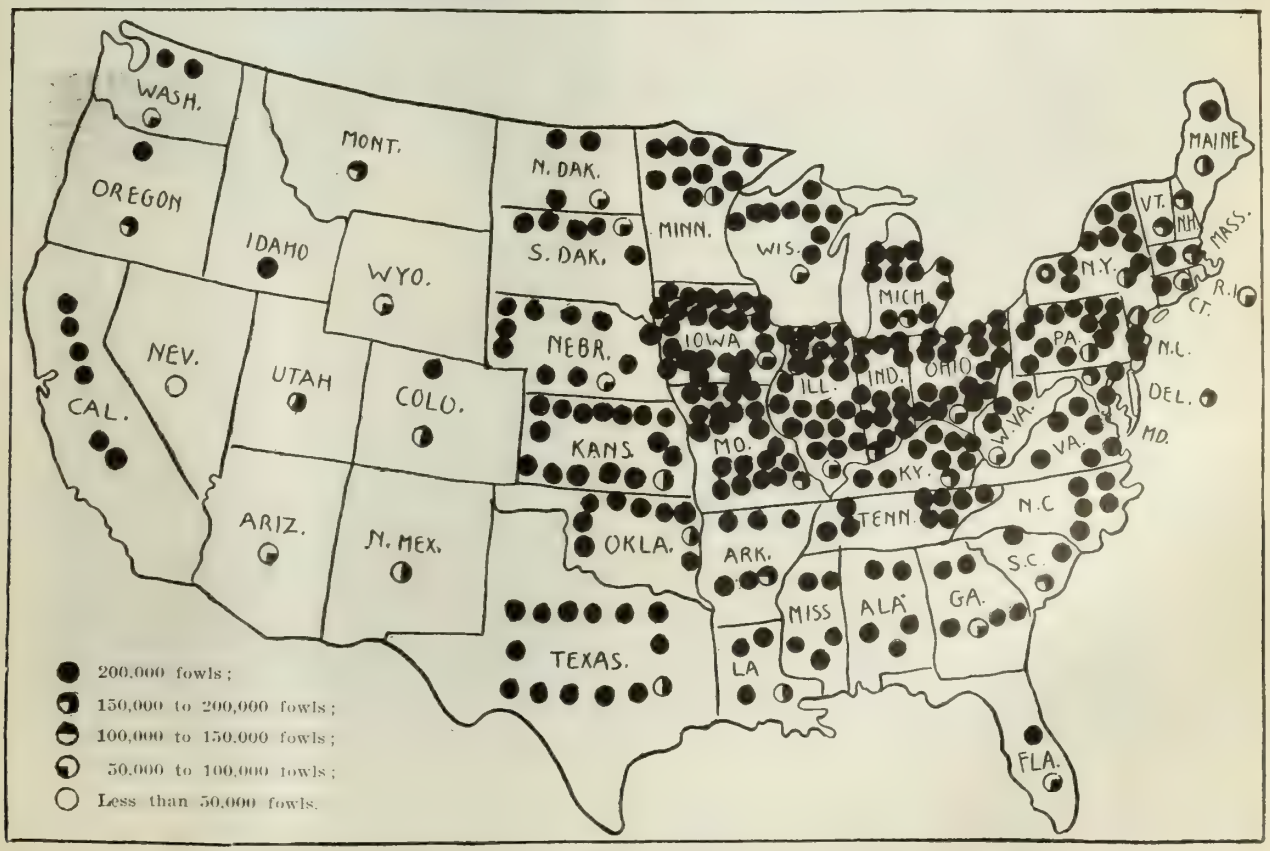


Chart Showing Distribution of Fowls by States According to the Recent Census

bring good returns, but if you select a paper that has its circulation largely in the western states, you will run a big risk as to getting your money back in the business secured.

FIRST W. WYANDOTTE HEN, CLEVELAND O. DEC. 1913. BRED AND OWNED BY— SHERMAN BOWDEN, MANSFIELD, OHIO

Those agricultural papers that attempt to cover the entire United States are usually less profitable for advertising poultry than those that cover a definite area. The reason for this is that the first-class papers cover such a large territory that they have few subscribers in any one section. The paper that covers one state, and does it thoroughly, reaches such a large percent of farmers in that state that you will be sure from a publication of this sort to receive large returns.

There are a few good farm papers that cover several states adjoining each other and connected by some common interest. Papers of this kind with a large circulation usually bring good results to poultry advertisers.

Remember this, that while you are advertising in a paper you are placing yourself directly amongst competitors. Your advertisement is entirely different from a letter, for while the reader is reading what you have to say his eyes are being attracted to the advertisement of one of your competitors, and unless there is something about your ad that will grip him and make him stop immediately and send an order or an inquiry you may not get his business.

For this reason it is important that your advertisement be right. You cannot expect the paper, no matter how good a paper it may be, to do all of the work in getting inquiries. No publication claims to be more than a distributing medium for advertisements. It takes what you have to offer and places it before several thousand persons. It can assume no responsibility for the effect the advertisements may have upon the persons to whom it takes them.

Advertising is a very interesting part of the poultry business and withal a very important one. Successful advertising is founded upon definite principles and when you once get those principles well in mind and prepare an advertisement that really brings the business, your advertising problem is largely settled.

The advertiser should adopt a special style which is recognizable at all times, and yet not carry the same old stereotyped wording. What he has for sale this year is different from what he had last, and the ad must be varied sufficiently to meet this condition, and to give the reader something new and worth while to consider, but the general principles on which the ad is built should remain the same from one year to another. There is no better way to establish a business before the buying public.

Increasing Inquiries From Advertisements.

When the breeder sends a check to a poultry paper in payment for advertising space he expects to get back that amount and a great deal more—in other words, he expects it to pay him. But there have been a great many disappointed poultry raisers after one or two attempts at advertising. The natural thing is to blame the lack of results from advertising to the paper wherein it was inserted, but in many cases it can be found by a study of the ad itself, because in the first place it does not attract the reader, and secondly, it does not tell him anything if he should happen to read it.

If you do not have an advertisement that will convince the reader that it will pay him to buy from you, you cannot expect the quality of the publication or the extent of its circulation to overcome this big defect.

In the first place, an advertisement must be attractive. Those poultry papers in which it is worth while to advertise have so many advertisements that the one that is conventional is not often studied thoroughly. The one that is distinctive and attractive is always examined first, and although this characteristic does not mean more sales, it is one of the most important aids in the making of sales through advertising.

After you get the attention of the reader, of course, you must then convince him that you have what he wants, and in addition to this inspire him to send you an order at once.

The matter of attractiveness may be worked out in a thousand different ways. Some men prefer to use attractive photographs and get good results by this means. Others use drawings, and oftentimes a well made drawing makes an advertisement so attractive that it is read before anything else on the page. Still others, especially those who use a smaller

FIRST PRIZE CKL. MADISON SQUARE GARDEN, DEC. 1913. BRED AND OWNED BY ARTHUR G. DUSTON, FRAMINGHAM, MASS.

space, have a distinctive shape or type of ad which is always the same and which is the distinctive feature of their advertisements. In this way their advertisement stands out on the page and by running it month after month, becomes so familiar

to the readers of the paper that many of them turn to that ad when they are ready to buy.

Take for example, the advertisement of E. B. Thompson. At

Unretouched photo of first prize White Wyandotte cockerel at Cincinnati, Ohio, Dec., 1913. Bred and owned by J. C. Fishel & Son, Hope, Ind.

the head of each ad he has, in a special kind of type, these words, "E. B. Thompson, Imperial Ringlet Barred Plymouth Rocks." At either side of the name, "E. B. Thompson," is a cluster of Plymouth Rock feathers.

This advertisement would stand out on any page and anyone who is even a casual reader of poultry papers would recognize it no matter where they saw it. The mere name "Barred Plymouth Rock" would not be especially attractive, but if that name is extended entirely across the page and is placed in white letters on a black background, instead of in the conventional way, it becomes distinctive.

Another way of making an ad distinctive is to use one or two large circles printed with a heavy line and containing some outstanding characteristics of your flock. A recent example of this method was that of the Mt. Pleasant Farm, of Mt. Pocona, Pa. This advertisement contained two circles, in one of which was this information: "We guarantee safe delivery of day-old chicks." In the other it said: "We guarantee to replace all unfertile eggs." Between these circles was this legend, "215 eggs a year."

The very form of the ad would attract the eye. The information given would certainly convince.

After you have the reader's eye, the next thing is to convince him that you have for sale what he needs and should have. This, of course, is done by argument.

There are many poultry raisers that give such small attention to their advertisements that all the information you get out of it is the name of the breed, the name of the man and his address. Sometimes there are a few general statements which might be said of any flock.

The argument in an advertisement must be just as distinctive as the form of the advertisement, and it must certainly be convincing.

Take for example the advertisement of the Mt. Pleasant Farm, previously mentioned. The rest of this advertisement read as follows: "A flock of 31 pullets grown from our chicks averaged 215 eggs a year in the hands of a customer, an amateur. Read our new booklet. Free. Learn of the profit paying fowls. Try modern successful poultry farming with Mt. Pleasant Farm Single Comb White Leghorn. Bred to lay. Day-old chicks. Eggs for hatching. 500 cockerels, $2 each."

You can scarcely get away from that advertisement, whether you are an old breeder or a new one. Facts such as these grip you like a vise and you cannot get away from them. Of course, it is not everyone that can say as much for their flock, but if you have stock that is really worth offering for sale through the medium of a high class poultry paper, there must be something really good that you can say about it, and that something, remember, must be facts—not generality.

Compare with the above advertisement the one that follows: "———— Rhode Island Reds, both combs, better now than ever before. Hundreds of high-class breeding birds at reasonable prices. Write us before ordering elsewhere. Eggs from high-class pens."

There is absolutely nothing convincing about this advertisement. Even if you have previously known of the quality of these birds, the statement that they are better now than ever before does not convince you. This is, of course, only the opinion of the man who wrote it and he does not leave you to use your own judgment at all. He gives you nothing on which to base judgment.

If your advertisement reads something after this fashion, be free to admit that it isn't as good as it should be and study to make it more convincing.

Here is another type of ad written to appeal more to old breeders who appreciate the value of show winnings: "———— S. C. Reds, Baby chicks, 100 pullets for sale. I have won at Cleveland, Columbus, Toledo, and Fort Wayne, for years. Latest winnings at Toledo: first, second, and third hen; second cockerel, fourth and fifth pen. Seven splendid pens made continuous prize winners. Eggs from pens, $3 and $5 for 15. Chicks, 50 cents and 75 cents each. Utility eggs, $6 per hundred. Chicks, 15 cents each. Send for catalogue."

If you are interested in poultry show winnings, this is an advertisement that gives you definite information on which to

A TYPICAL GOLDEN WYANDOTTE MALE.

base judgment. Of course, if there is an advertisement just beside it that shows even better winnings, then you would naturally buy from the second.

This ad, however, contains a sentence which will probably bring more inquiries than if it had not been used. The sentence referred to is the last one. "Send for catalogue." This is a direct command—a suggestion, if you please. It tells of something definite to do. It will result, however, in more persons writing for the catalogue than sending an actual order, but if this man's business is large enough to afford a catalogue, he can probably also afford to write an extra letter.

The fact remains that when your advertisement contains a definite suggestion at the end which is easy to carry out, you are likely to have more replies to your advertisement than otherwise.

If you want orders instead of letters of inquiry, you must first give enough information in the advertisement so that the prospective purchaser will know exactly what your stock is like and then make a suggestion at the end which will make it easy for him to send his order at once.

For example, use such an expression as this: "Tell me what you want, what you want it for, and the price you can pay. I guarantee satisfaction or your money back." Or use some such line at the foot of your ad as is used by Owen Farms: "I want your order, and remember your ABSOLUTE SATISFACTION means my PERMANENT SUCCESS."

Such suggestions at the close of an ad actually work wonders. The estimate of their value is not theory, but the result of actual practice.

England Leads in Egg-Laying Contest

Ten English W. Leghorns Average Nearly 43 Eggs Each for December and January. Missouri S. C. Reds Win Second for Month Valuable Lessons Shown. *By T. E. Quisenberry*

THE pen which won the prize and made the best record in the contest two years ago did not begin to lay until about this time. Then they went to work in earnest and won out over many pens which had gotten a good lead over them. This same breeder has a pen in this contest and they have started to lay again just about as they did in the first contest. These, or some other pen which is just now beginning to lay with a vengeance, may win out again.

The English pen of S. C. White Leghorns has gotten a lead of 104 eggs over its nearest competitor, and it looks as if they mean to set a lively pace for others to follow. They won the silver cup for January by laying 221 eggs. They have averaged 43 eggs per hen for December and January. Most all of the other foreign pens have been out of condition, and suffered greatly because of the change in climate.

The total eggs for January was 10,520, and this makes the grand total 17,312. The average for the first two months is 16.63 eggs per hen. S. C. Reds, from Sedalia, Mo., won second place for the month with a record of 205 eggs.

One thing is certain, White Wyandottes have proven themselves to be consistent layers. Each year for three years, they have been among the leaders. The worst objection we have found with them is that their eggs run low in fertility and their eggs are not of a uniform size and color. This condition is due, however, more to carelessness on the part of the breeder than it is to a fault of the variety. We have some strains of White Wyandottes which lay a large egg of uniform size and color, and which are up to the average in fertility, but White Wyandotte breeders, as a rule, have not given as much attention to the selection of eggs for hatching as they should. Orpingtons have also been among the leaders each winter. They seem to be good winter layers, but they lose out in summer during the broody season. If the Orpington breeders wish to build up a good strain of layers, they had better eliminate the hens from their flocks which are continually broody. That is, if you have two hens of equal quality and one lays a few eggs and becomes broody, and lays a few more eggs and becomes broody again, and the second hen does not show such a tendency to broodiness, I would prefer the eggs from the second hen for hatching purposes rather than from the first. I would also much prefer to breed from a male from the second hen than from the first.

Rhode Island Reds look as if they were going to do much better this year than in any previous year. The pen of S. C. Buff Leghorns, which are among the leaders, are full sisters. Three years ago the pen from which they were bred averaged about 100 eggs. By careful selection and breeding for three years, they were bred up until the mother of these pullets and the entire pen from which she came, averaged nearly 200 eggs per hen last year.

How can such results be obtained? How can Tom Garron and other such noted experts in England and America breed up strains of fowls of different varieties which will for three years in succession outstrip their competitors at the Storrs Contest, the North American Contest, and at the Missouri National Contest, where they are submitted to the trap nest test and all are put on an equal footing as far as housing, feed, care and management are concerned? How can the Australian and New Zealand breeders make such marvelous records year after year? These are things which every breeder of poultry ought to consider. It is a noticeable fact that pens from the same breeders in each contest maintain about the same average egg production, whether the pen is in Storrs, Philadelphia, or Mountain Grove, and all these methods of housing and feeding are entirely different. The breeding back of the birds make them maintain about the same rate of production, no matter where they are being tried out. This holds true with both good and bad pens. When I mentioned "strain" and "breeding" and "selection" as the foundation of a flock of high egg producers in my reports two years ago, some "authorities" made light of such "nonsense." They claimed that you could take most any old fowl and by giving it the right feed and care, you could get equally as good results as the breeders who were leading in the Egg Laying Contests. That is, they said there was nothing to "strain" and that "breeding" was not the secret of egg production. Of course, we know that without the proper feed and care, a hen will not lay many eggs, no matter what strain she is from or how good her breeding may be. But when a breeder can make a consistent record in laying con-

First Rose Comb Rhode Island Red Cockerel, Detroit, January, 1914

tests year after year and lead all competitors, we will have to admit that he has a superior laying strain. If Mr. A has a pen of Barred Plymouth Rocks which leads all other Plymouth Rocks year after year, and Mr. B has a pen of

Barred Plymouth Rocks which is at the foot each year for three years, we will have to admit that Mr. A has a laying

BEAU BRUMMEL II
Son of Beau Brummel I. Prize Pen Cockerel, Chicago, 1913. First Young Pen, Indianapolis 1914. Owned by Willows Farm, South Bend, Ind.

strain and Mr. B has a strain which are not good egg producers.

What can we do to improve our flocks and build up an egg-laying strain? The hatching season is on and I would advise you to bear these things in mind:

1.—It must be remembered that a chick with a strong constitution is better equipped for fighting diseases than a weak chicken with all the medicines and condiments known to the medical science. Then breed for constitutional vigor.

2.—Many disease germs are transmitted from parent to offspring, so all diseased birds, or birds which ever have been diseased should be removed from the flock. This past month we had a striking example of high vitality and low vitality. Two pens were housed in the same house, drank from the same pan, ate the same kind of food and slept under the same roof. One pen went all to pieces and every one of them were sent to the hospital. The pen on the opposite side withstood the severe weather, kept in splendid health, and is one among the very highest pens in egg production.

3.—Breed only from a male which has been hatched from an egg laid by a high laying hen.

4.—Select your best laying hens to mate with the above male.

5.—Breed from early maturing pullets.

6.—Don't breed from hens which are continually going broody.

7.—Breed from your hens and pullets which lay in November, December and January.

'Tis true the hen which has been laying through the winter will go to sitting first, but by this time the loafing hen has begun laying so the good hen is set on the poor hen's eggs, which practice has a tendency to produce a flock of loafers.

The best record made thus far by representatives from the different countries was as follows:

	Eggs.
White Leghorns made best English Record	427
Buff Orpingtons made best United States Record	323
Buff Leghorns made best Missouri Record	286
White Leghorns made best British Columbia Record	226
White Leghorns made best New Zealand Record	205
White Leghorns made best Vancouver Island Record	199
White Wyandottes made best Ontario Record	196
White Leghorns made best Australian Record	158
White Leghorns made best South African Record	127

Most of the foreign birds have suffered greatly because of the change in climate and the long shipments. They were all from two to six weeks en route, and many of them will never recover from the effects of the trip and the change of climate. Some few have died as a result and most all of the foreign birds have shown signs of being out of condition. One English pen has been the exception and that pen is in the lead. We may be able to get a few good individual records from the Australian, New Zealand and South African pens, but those pens as a whole will never do justice to themselves. The New Zealand breeders only sent from six to eight birds for each pen, as that is the number used in the contests in that country. On account of the long time it takes to pass mail back and forth from each country, they did not get a copy of the rules governing the contest before the time they were obliged to make their shipments. Most all of their birds were also very young and will not mature for nearly two months yet. The Australian and New Zealand birds had also just passed through a winter in those countries and were sent here just in time to pass through another winter. Being so young and passing through portions of two winters in succession, and reaching a climate quite different from their own, it is enough to put them out of condition, and it is doubtful if we can get any very good records from them. We certainly appreciate the confidence which has been expressed in us by the shipment of valuable birds from all parts of this country and all parts of the world, and it is needless to say that we will do the very best we can by every pen entered, whether it be from Missouri, America, or from the opposite side of the globe. Conditions often arise which we cannot control, and upset our plans and blast our hopes, but our one desire is to be fair to all contestants and get the very best records we possibly can.

National Egg Laying Contest.

The 600 hens in this section of the contest have made a most excellent record for January. They laid 7,312 eggs, or an average of 12.19 eggs each. If this section of the contest

SINGLE COMB R. I. RED.

First pullet Hagerstown, 1912; first hen Wilkesbarre and Scranton, Pa., 1914. Bred and owned by L. W. Maxson, Scranton, Pa.

will continue as they have started, there will be some record breakers among them.

The ten highest pens in this test are as follows:

Pen.		Eggs.
0.	S. C. White Leghorns, England	427
36.	Buff Orpingtons, Texas	323
18.	White Wyandottes, Pennsylvania	322
24.	White Wyandottes, England	294
1.	S. C. Buff Leghorns, Missouri	286
5.	Anconas, Missouri	285
34.	White Orpingtons, Ohio	282
47.	S. C. Reds, Missouri	281
39.	S. C. Reds, Missouri	279
4.	S. C. Buff Leghorns, Michigan	274
2.	Anconas, Missouri	274

White Wyandotte Hen No. 181 from Pennsylvania has laid 53 eggs and leads all hens in the contest. Buff Plymouth Rock Hen No. 524 from Missouri is second, with 52 eggs.

National S. C. White Leghorn Contest.

The 280 hens in this section of the contest laid 2,023 eggs in January, or an average of 7.26 eggs each. The average was cut down because of the four immature pens from New Zealand. For some reason, nearly every pen of White Leghorns went into a moult this month, and many of the hens were as naked as they ever are in the fall months when moulting. The last part of the month they laid better than at any previous time, so we expect to see the Leghorns climb from this date on.

The best ten pen records thus far are as follows:

Pen.		Eggs.
79.	S. C. White Leghorns, Pennsylvania	303
65.	S. C. White Leghorns, Missouri	230
70.	S. C. White Leghorns, Missouri	227
64.	S. C. White Leghorns, British Columbia	226
61.	S. C. White Leghorns, Nebraska	209
77.	S. C. White Leghorns, Vancouver Island	199
69.	S. C. White Leghorns, Kentucky	192
80.	S. C. White Leghorns, Missouri	192
71.	S. C. White Leghorns, Missouri	178
67.	S. C. White Leghorns, Missouri	170

Hen No. 702 from Missouri has made the highest individual record with 44 eggs to her credit, and Hen No. 653 from Missouri is second with 43 eggs.

National Utility Contest.

The hens in this experiment are in much better condition now than they were one month ago, and we will be disappointed if they do not make good records from this time on. The 160 hens in this test laid 1,175 eggs for January, or an average of 7.34 eggs each.

The ten highest pen records are as follows:

Pen.		Eggs.
92.	S. C. Reds, Pennsylvania	274
86.	Barred Plymouth Rocks, Michigan	200
95.	S. C. Reds, New Hampshire	167
99.	White Wyandottes, Arkansas	145
85.	Barred Plymouth Rocks, Texas	127
88.	White Orpingtons, Kentucky	120
94.	S. C. Reds, Ohio	101
90.	White Orpingtons, Missouri	101
93.	S. C. Reds, New York	93
89.	White Orpingtons, Missouri	88

The two highest individual records were made by S. C. Red hens Nos. 926 and 927, laying 43 and 41 eggs, respectively.

Stock Selection's Influence on Egg Cost

Comparison of Results with Strong and Weak Flocks and the Food Cost Per Dozen Eggs. *By Walter C. Hunter*

ALL the main questions surrounding a venture into poultrydom, or even agriculture in general, are contingent on the question of market. It is of neither sense nor value to be able to produce commodities of this nature if the transportation and handling charges are to eat up all the profit; and neither is it advisable to raise the finest eggs, fowls or fruits if your particular specialty does not meet with favor in the market you are catering to. In other words, among other things, prejudice must be reckoned with.

Therefore, to the producer starting to supply the New York market the question of fowls to be kept at once limits itself to those that produce white eggs. And among those people devoting their whole time to poultry, for the supply of this market, the White Leghorn fowl is found in such superior numbers that the issue further narrows itself to the choice of that breed.

In those markets where the brown egg is desired, Boston among that number, the choice of fowls offered is quite wide, as all the American type (Barred and White Plymouth Rocks, Rhode Island Reds, Wyandottes), the Asiatics and also the English Orpingtons, lay eggs of that color.

To those keeping poultry for their own use the brown egg birds, usually known as general purpose fowls, will be found by far the superior kind. What little they lack in egg production is easily made up by good qualities as a table fowl.

This question as to breeds is one that has been ever debated. Most comparisons are not illuminating, as the circumstances under which the fowls are kept are too different for comparison. Still, what seems like a near approach to a settlement of a small part of the issue was made at Cornell in one of their investigations. There were three flocks kept under similar conditions, for a period of two years. While the real object of this experiment was to ascertain whether constitutional vigor is a matter of inheritance, much other valuable data pertaining to egg yields, food consumption, broodiness, etc., was obtained.

This experiment started in the summer of 1907. The idea was to make the comparison between strong and weak flocks. First, two lots of White Leghorns were selected from range grown stock. Later, in the fall, two more lots of White Leghorns were selected and then, to give the result greater value by comparing two different breeds of poultry, two pens of Barred Plymouth Rocks were chosen, each of which had showed proclivities either toward strength or weakness. Be it understood, however, that in each lot of the pullets picked from weak pens "there were, at the time of their selection, such as would ordinarily be considered strong and active individuals." Howbeit, they had, at one time in their growth, showed such weakness that, in order to save their lives, a specially digestible and nourishing ration had been given them. Consequently, as C. A. Rogers points out, the term weak is a relative one.

After selection the stock were allowed to remain under range conditions until the usual time of going into the laying houses. In this interval many changes occurred in the flocks. Some improved greatly; others went back after the special feeding was abandoned. But at the time the fowls went into permanent quarters the strong birds were what would classify as highly selected stock, and the weak fowls varied considerably, some seeming much better than others; still, comparing them as flocks, the strong birds averaged heavier in weight than did those of low vitality. In the case of the Barred Plymouth Rocks the amount was as great as one and one-third pounds each.

Accordingly, as we have endeavored to explain in the foregoing, there were six flocks of 25 fowls each; two flocks of White Leghorns and one of Barred Rocks, all strong birds; and two flocks of White Leghorns and one of Barred Rocks, all of which were of low constitutional vigor.

The fowls were housed in three different types of houses, under conditions commonly recognized as proper, regarding space, air, range, etc. A strong and a weak flock were placed in similar houses. All flocks were treated alike as regards care and food. The grain ration fed night and morning was the well known Cornell ration of wheat, cracked corn, and oats. This was supplemented by green food fed at noon, when the dry mash dishes were opened. The nutritive ratio of the scratch grains was 1:7.8 and of the ground grains 1:1.8. About four times as much grain as mash was fed. When the ration was narrowest the egg production was greatest. In this case the average was about 1:4.5.

All data was very thorough, which, of course, adds to its value. They were trap-nested, weighed individually each fourth week; food was weighed and consumption of different kinds closely tabulated. The experiment extended one year as pullets, a second year as yearling hens and two lots of chickens were raised and the record of one lot of progeny for egg production, etc., was noted.

Undoubtedly the commonest sign of the good layer is heavy feeding. The power to digest large quantities of food is the cause of which this heavy laying is the effect. In other words, it is only because of high vitality in a fowl that it is possible for the bird's system to assimilate so great an amount of food.

In all cases in this experiment, it was found that the fowls of high vitality consumed more food than was the case with the weaker ones. Furthermore, the whole grain (scratch feed) eaten was nearly the same for all flocks of similar kinds. This is in accordance with a majority of observations: that the fowls prefer the whole grains to the dry mash and, if they could get a sufficient amount, it is very likely they would pick out from the dry mash only those tidbits necessary to give the ration greater balance.

In the matter of eggs, the flock that ate the most dry mash laid the most eggs; and inversely the flock that ate the least dry mash laid the least eggs. Here again we have statistics agreeing with an opinion quite general: that a liberal feeding of dry mash produces the greatest number of eggs. Dry mash bulks larger than the whole grains and will go further, pound for pound. We notice that if birds are troubled with colds or roup they will not eat the ground grains. At the same time a few of our very best layers hardly ever eat a mouthful of dry mash.

It was noted that the proportion of meat scraps varied with the amount of mash eaten, though it never reached 7%. Coincident with heavy egg production was the consumption of shell and grit. The amount eaten was almost in a direct ratio with the eggs produced.

We believe the average observer will agree with us when we say that oyster shell is necessary only to the producing hen. An authority cites an instance of 25 Brahmas consuming it at the rate of a quart a week. Our experience has been that an equal number of Barred Rocks, in 50% lay, will use a quart in a slightly less time than two weeks. Moreover, at a time when the egg yield is practically nil for reason of the

First Prize Pullet, Madison Sq. Garden, Dec., 1913
Marrland Leghorn Farm, Cambridge, Md.

moult, hardly any shell is consumed and, at that time, it is possible to tell the layers just by observing those that eat shell after the evening feed.

One also can pretty near tell whether a fowl is a pullet or hen by the length of time it takes to overcome its desire to sit. Notice this corroboration: In the Cornell test each Barred Rock was, on an average, broody 2 2/5 times, losing thereby 11 2/3 days; but the Leghorn averaged only 3/4 of a time each and lost 3 1/4 days. Notice, now, the results for the second year. While with the Barred Rocks, the number broody was slightly less and with the Leghorns about 18% greater, the time of broodiness was, considering the number of hens broody, from 50% to 75% greater!

During the natural laying season all hens may be expected to lay at least a few eggs. But to continue heavy laying for any length of time the fowls must prepare for it by storing up fats to draw on while a large part of their nutriment is going into egg production. Thus we see that, during the fall and early winter they are steadily putting on weight, which falls off rapidly during the time of heaviest egg production, running low during the summer, until the time of moult. Strange to say, the heaviest consumption of food takes place at a time just previous to the greatest production of eggs. After reaching the highest point it falls very rapidly.

That the pullet year is the time of greatest egg yield now is a matter of common acceptation. This investigation at Cornell upholds that statement were further proof necessary. During the pullet year the strong fowls averaged a yield of 35.0 and the weak ones 31.9, or a cost of production of $0.12 a dozen for the strong and $0.131 for the weak fowls. For the hen year the same flocks averaged 29.74 for the strong and 28.57 for the weak; a cost production of $0.15 for the strong and $0.153 for the weak.

The average cost of producing a dozen of eggs was from three to five cents more during the hen year than was the case during the pullet year!

As the test offers a very good breed comparison, let us for a moment glance at the most noticeable differences. The Leghorns are one of the smaller breeds and have the advantage

of early maturity. In this experiment, the strong Leghorns averaged 17.8 yield during the first period (Dec. 10 to Jan. 6, inclusive), against 3.0 for the strong Barred Rocks. Even

WINNER OF SECOND PRIZE, CHICAGO, DEC 12-17, 1912
HENRY STEINMESCH. ST LOUIS, MISSOURI

the weak Leghorns averaged for the same period 12.55, compared with the poor showing of 0.1 for the weak Barred Rocks. In the second period (Jan. 7 to Feb. 3, inclusive), the strong Leghorns averaged 32.65 against 27.7 for the Rocks; and the weak Leghorns 27.86 against 1.5 for the Barred Rocks. Yet take it for the whole year and the value of the eggs produced by the large breed equals that of the Leghorns!

The value of eggs produced may be likened to the gross receipts of a business. What we wish to know is, What are the net receipts? What is left after bills are paid? In other words, how much gold glitters in the bottom of the pan after we have washed out all the dross? We are on the way of finding out.

The Leghorn being a smaller bird than the Rock, it is not surprising that it requires less food to maintain the up-keep of its system. Consequently, a greater part of the food eaten goes to egg production. Hence it was found that, while the average cost of producing a dozen Leghorn eggs was $0.12 for the pullet year and $0.14 for the hen year, the Rocks cost $0.14 the pullet year and $0.178 the hen year. The weak Leghorns cost virtually two cents more to produce a dozen eggs than was the case with the strong Leghorns, and one cent more in the case of the Barred Rock pullets. The weak Leghorns' cost of producing each dozen of eggs was a fraction more than the cost of the strong ones. Odd as it may seem, the weak Barred Rocks produced a dozen eggs for almost two cents less than the strong ones,—but only the hen year.

The Plymouth Rocks consumed a greater amount of food, but, during the pullet year, there was compensation for this by the value of the increase in weight. When we get down to hard pan there is little choice between the breeds. What you lose in one way you gain in another. If your Rocks eat more they also weigh more and, therefore, have greater salable value. If they lose three times as much time as the Leghorn, because of broodiness, what matters it when at the end of the year we find the value of eggs is the same?

Presumably you keep only pullets for egg production. Your Leghorns have, as layers, a good month's handicap over your Barred Rocks. You can likely discard them a month earlier; so that you might, in ten months' laying, get the same results from the Leghorns as a year would yield from the Rocks. In this way the saving of two months' feed would add to the profit of your Leghorns.

It looks as if this was an individual proposition which each must solve for himself, and much dependent on time of moult and price that can be realized on marketed stock,—after a year's laying.

The Cornell test, at any rate, proved that stock selection influences almost everything. It was seen in increased egg yield, mortality, greater fertility and hatchability of eggs, liveability of chickens and economy of food consumed.

The primary object of this experiment was to see just what benefit stock selection has upon progeny and other factors of poultry-keeping. Perhaps it may seem to some that our analogy has taken us far afield. We think the results of this particular investigation as compared to the original intentions, show more plainly many side issues than they do the main one—that of the difference between strong and weak flocks. Albeit, let us append the conclusions of the investigator and commend to those further interested a thorough study of this very meaty Cornell Bulletin No. 318. Herewith the conclusions:

"1. The selection of fowls for strong vitality, even though the selection be slight and exercised but once, increases the productive and the reproductive power of a flock.

"2. One selection only, no matter how rigid, is not sufficient to keep a flock permanently superior.

FIRST PRIZE S. C. BLACK ORPINGTON COCKEREL AT CINCINNATI, OHIO. OWNED AND BRED BY WM. COOK & SONS — ORIGINATORS OF ALL THE ORPINGTONS, SCOTCH PLAINS, N. J.

"3. The selection of mature pullets is of more value than that of partly grown chickens.

"4. Selection at the beginning of the second year is of equal importance to that of the first year."

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Come to Chicago.

On Tuesday night, February 17, the Chicago Poultry Society held a very enthusiastic meeting at Marco's Cafe, to discuss ways and means for entertaining the members of the American Poultry Association at the next annual convention if held in Chicago. The following officers were elected at this meeting: Jas. W. Bell, president; E. M. Whitney, vice-president; E. J. W. Deitz, secretary; D. E. Hale, treasurer; executive committee, S. A. Smith, Chester E. Clapp, Frank A. Cleveland, A. B. Moe and F. A. Kaup.

A formal resolution was passed inviting the American Poultry Association to hold its next annual meeting in Chicago. A few of the many suggestions for entertaining the visiting members were as follows: A grand automobile parade over the 50-mile boulevard and park system of Chicago—one of the most beautiful auto trips in the world; a moonlight boat ride on Lake Michigan for both ladies and gentlemen; a luncheon for the ladies at one of the large department stores, after which they will have guides and visit the different departments of that and other stores; one night for all parties at one of the large amusement parks with all concessions free; an afternoon visit for the ladies to the famous Chicago Art Institute; also an afternoon at the Field Columbian Museum, and many other attractions.

Mr. F. D. Rogers, president of the Elgin Poultry Association, and A. D. Smith, secretary of the Quincy Poultry Association, both attended the meeting and stated that their associations would vote for Chicago and help entertain the members. Mr. D. E. Hale, president of the Illinois State branch of the American Poultry Association, stated that this organization would back Chicago to the limit.

A committee consisting of Messrs. Bell, Woods and Whitney called on Mr. Spangler, manager of the convention bureau of the Chicago Association of Commerce, who assured the committee of the loyal and liberal financial support of that association in helping to entertain the visiting members at the convention. The same committee interviewed the management of the Hotel Sherman and were offered the free use of its large convention hall which seats over 1,500 people, also the free use of all the committee rooms needed to hold committee meetings. Hotel Sherman is located in the heart of the business district and is one of the largest and finest fire-proof modern hotels in Chicago, with 750 rooms, all with bath.

Well, boys, if there is anything more you want just speak right up—we are right here on the job to get it for you. Get in the band wagon and vote for Chicago and then attend the largest gathering of poultry breeders ever held in the country.

Crusade Against Magazine Mail Rates.

Once again our lawmakers in Washington are organizing a crusade against the possession of the second-class postage rate by magazines. Just why this matter should come up every year is difficult to understand. A bill has been introduced into Congress to raise the magazine postage rate from one to two cents a pound. It is to be hoped that this bill will be defeated since it is unjust discrimination against magazines. The magazines play a most important part in the education of our people, and in these days of parcel post prove a wonderful medium for making better business and enabling producers and consumers to deal directly with one another for mutual benefit.

There can be no question that magazine business and advertising greatly increases the profitable business of the United States Postoffice Department. Because of magazines, first-class mail matter is wonderfully increased, parcel post has been built up and become wonderfully profitable, and all profit-paying mail classes are benefited. From a purely business standpoint it is good business for the United States postal system to deliver magazines at second-class postage rates. From a standpoint of better educational advantages for all of our people, better living and better civilization, the government could well afford to send magazines through the mails without charge.

Write your congressman and protest against any increase in magazine postal rates; insist that the old second-class rate be continued, for this affects YOU. DO IT NOW!

Chinese Eggs Threaten the West Coast.

With eggs of poultry on the free list of the new tariff, the "yellow peril" seems to have struck hard in poultrydom on the Pacific Coast. We bar out the Chinaman but we encourage him to ship us cheap eggs from his scavenger flocks and already importations of foreign eggs are considerable.

The Pacific Coast poultrymen are thoroughly aroused and indignant. The Sonoma County (California) Poultry Producer's Federation has begun a vigorous campaign of protest and protection for American egg farmers. They state that our modern sanitary egg farms, producing wholesome eggs from fowls well fed on clean, wholesome foods, cannot compete with the cheap Chinese eggs. Our white farmers cannot and will not live as the yellow men do, and they protest that they cannot pay taxes, educate their children, provide for their families and be good citizens generally, and meet this cheap foreign egg competition. Their protest is well made and should have a respectful hearing and due consideration.

After our people become acquainted

with them we don't believe Chinese eggs will be in much demand. The danger lies in their being sold as domestic eggs and by big egg dealers be put into direct competition with our home grown product. The sale of foreign eggs should only be permitted when the goods are duly labeled as to source of the importation and the date of same.

It is a well-known fact that sanitary conditions in China are practically a minus quantity and anything but what they should be. All human waste and excrement is used for fertilizing food crops. Cleanliness in the Far East is practically unknown as our Western minds view it. The Chinese hen is reputed to be living in filth and making a living as a scavenger amid all sorts of repulsive filth. We, in this country, don't want filth-fed eggs. We know that the quality of an egg depends upon the food eaten by the fowl producing it. We also know that very dangerous germs sometimes get into eggs. For this reason, as well as our desire for the prosperity of our own countrymen, let us hope that the protest of the Pacific Coast poultrymen will prove an effective one and that Chinese, or other doubtful foreign eggs, must not compete with our home grown product.

E. B. Thompson and a Second Term.

The present active interest taken by an encouragingly large number of breeders and fanciers in the work and welfare of the American Poultry Association is cause for satisfaction to every earnest believer in the possibilities of this body.

It is not a reflection on anyone who has at any time been active in the organization to say that Mr. E. B. Thompson, as president, is justly entitled to a very great deal of credit for this interest. As president of the association he has been president of the whole body—not of any faction. He brought to his office a splendid equipment. One of the oldest breeders in the country; an authority and a successful producer of the extremely popular variety, the Barred Plymouth Rocks; a man who has built up, by his own endeavors and superior ability, a business aggregating tens of thousands of dollars a year; one who is progressive where progression means improvement and who is conservative where great care should be exercised—he has commanded the respect and the loyal support of men of diverse views and of strong character. As a result, the association is today profiting by the work and the enthusiasm of a greater number of able and influential men than ever before. The lists of his committees and committeemen, which from time to time have been published in the columns of this journal, are evidence of the truth of this statement.

Furthermore, the next meeting of the American Poultry Association will, to our mind, be notable for more valuable and necessary legislation than any other in its history. Credit for much of this must go to Mr. Thompson. Many important committees will present their reports, and sound statutes will be enacted. The poultry industry is rapidly rising to a position of dignity which the vast assets and the large number of earnest and enthusiastic men and women engaged in it deserve.

With a desire to see the present condition of harmony and progress continued, the American Poultry Journal most cordially endorses Mr. E. B. Thompson for re-election. We trust that his nomination will be unanimous. The experience gained during his first term will be of great value in a second term. The men whose active co-operation he has secured will continue their interest, and their numbers will be augmented. Thus will the association be greatly benefited.

"New-Laid" or "Storage" Articles—Which?

Here are a few clippings for you to compare. Perhaps they may suggest something to you:

"The American Poultry Journal has two offices. When copy is submitted it should be sent to the editor, addressed Silver Lake, Plymouth County, Mass. If payment for copy is neglected, a letter of inquiry should be addressed to the American Poultry Journal, Chicago. Payment is made after publication at the rate of about $2 per column."

"In a letter to a contributor the editor of The Poultry Fancier, of Sellersville, Pa., says that the publication of the article submitted would probably be of greater value to the author than to the paper. However, the paper is willing to publish it without remuneration to the author."

S. C. BLACK ORPINGTON.

Winner of three firsts, first cockerel Ohio State Show, 1913; first cock Columbus, 1914; first cock Cincinnati, Dec., 1913. Owned by Syl. T. McCabe, 555 Fourth Ave., Columbus, Ohio.

"The Reliable Poultry Journal, of Quincy, Ill., in a letter to a contributor informs him that the journal is over-stocked with copy at the present time. Plans are made for a year ahead each August and copy is engaged at that time for the following year. The editor suggests that if copy is to be submitted it should be sent in next August."

"The American Poultry Journal, with its editorial office at Silver Lake, Plymouth Co., Mass., conducts a department in which are considered the methods of women poultry raisers. About $2 a column is paid for material after publication.

"Mrs. Helen T. Woods is the editor of this department."

The above quotations are from the January number of "The Writer's Magazine, a journal of information for literary workers." We do not intend to make extended comment.

American Poultry Journal employs a big and well paid staff of editors artists and regular contributors. It also is always in the market to buy good, live, interesting and instructive articles on poultry subjects. We want live, new, clean, fresh material that tells the story with plenty of helpful human interest.

We do not want articles the publication of which is of more value to the author than to the paper and therefore of little or no value to the reader.

We do not load up in midsummer with a varied assortment of stale material to be spread out over the next year or so. Our magazine is now in its forty-fifth volume. We are not and never have been overstocked with good, live, up-to-date poultry articles. We are always glad to get good copy and to rewrite and revise manuscripts that contain good, live, "new-laid" ideas,—and we pay for the ideas.

We are always glad to read manuscripts. If not available they are returned to the author if return postage is sent; if not they go into the waste basket. We buy available manuscripts and ideas. It is easy to get an overstock of material of certain sorts, but, we do not expect to ever be overstocked with good, live, helpful poultry information.

Mr. Reader, do you prefer your poultry information of the helpful, fresh, "new-laid" sort or would you rather have the "cold storage" variety,—stale long before it can be printed?

Fads, Faddists and Raw Food.

We certainly seem to be a race of faddists and extremists. Every season brings new fads, or old fads in new guises, and there is a mad scramble to follow the fad. Are human beings all getting so out of balance and so neurasthenic that the appetite for something new, for novelty and yet more novelties, is becoming insatiable?

Fashion changes rapidly in both dress and in kind or quality of amusements. Even the fashion in exhibition excellence of fancy poultry changes with the season and officially the Standard of Perfection changes in regular five year cycles. Change is right and good in its place and in moderation. We can't have progress without progressive changes. But is it necessary to go to extremes; to laud, preach and praise a thing one minute and condemn it almost with the next breath? Isn't that going a little too strong?

Well balanced folk ought to be able to fine some "happy mean between extremes"; possess the good, both old and new, and cast out the bad, whether new or old, and so help progress. The wild scramble from one novelty to another, the mad off with the old fad and on with the new, and change merely for the stimulus to be derived from a new form of faddism, all reminds one of the old saying: "Whom the gods would destroy they first make mad."

We have been amused lately by the near-science teaching now prevalent in some of our big colleges in the effete East. Just now the college professors are making a sweeping condemnation of all raw foods. Now, we hear preached that raw foods are dangerous, indigestible, form dangerous poisons in process of digestion, and are full of germs. And we are told that most raw foods are bad for us, unsafe, even fatal, and that only cooked foods are good and fit to eat. Good Lord, what rot!

Here we are only just getting our breath back from a wild and riotous crusade of the raw food faddists; in which raw foods were the panacea for

all ills on earth and presumably both above and below it; now we must make a quick change to suit another quick-change-group of near-scientific faddists. Well, anyway, while they are preaching and anointing converts maybe they are keeping out of other mischief. Let's hope so.

As a matter of fact there is a "happy mean between extremes" for those who have the sense to see it. Some foods are best cooked and some are best raw and some are good both cooked and raw. Then too there is a whole lot of difference in cooking. You bet!

Raw foods of certain sorts are both necessary and desirable for human kind and for animals, including poultry. We wouldn't want to get along without our share of raw foodstuffs and we certainly wouldn't do without a good proportion of cooked foods if we could help it. Foodstuffs like salads, succulent roots, cabbage and the like that are simply washed, cut up and eaten fresh and raw, should not be grown in human excrement. If intended for poultry feeding, greens and roots to be fed raw should not be grown in poultry dung. That is where the danger is greatest. Some particle of dirt clinging to the foodstuff may harbor a menace to health and life. Cooking, thorough cooking, would remove the danger, but we want the advantage from feeding that particular foodstuff raw while its cells are still alive. Raw food doesn't destroy primitive man or animals in the wild, so don't worry.

Make up your mind to enjoy and benefit by the good things in life. For yourself and your stock use such foods both raw and cooked as you find best. Try to steer the happy middle course between extremes. Let the fads come and let the faddists rave over them; if you get the right point of view you can see the humor of the situation and get a lot of fun out of it all.

Shipping Eggs and Breeding Stock to Canada.

Many Canadian buyers complain that breeders in the United States are careless in making and billing shipments of pure-bred poultry and eggs for hatching into Canada and for that reason the buyer often experiences annoying delays or is obliged to pay a heavy duty in many cases. We wrote to the Commissioner of Customs, Ottawa, Canada and received the following reply:

Department of Customs,
Ottawa, Nov. 22, 1913.

Sir:—

I have the honor to acknowledge the receipt of your letter of the 14th instant requesting information as to the invoicing and entry of pure-bred poultry for breeding purposes and eggs for hatching, when imported into Canada.

In reply I am to refer you to the provisions of Memo. 1475B, copy enclosed, which contains the regulations for pure bred domestic fowls for the improvement of stock. If a certificate of purity of blood, signed by the breeder, and describing the breed, is furnished to the importer in Canada along with the invoice, no difficulty will be encountered when entering such pure bred fowls for duty.

Eggs, whether imported for hatching purposes or otherwise, are dutiable at the rate of 3 cents per dozen when imported from the United States.

I have the honour to be, Sir,
Your obedient servant,
JOHN McDOUGALD,
Commissioner of Customs.

Memo. 1475B reads as follows:

Memorandum.

Department of Customs, Canada,
Ottawa, May 13th, 1908.

To Collectors of Customs:—

Regulations respecting free entry of pure-bred Domestic Fowls, for Improvement of Stock.

In cases of importation and entry of pure-bred Domestic Fowls for improvement of stock, a certificate of purity of blood, signed by the breeder, and describing the breed, shall be furnished on or with the Invoice to the Collector at the port of Entry.

The identity of the fowls described in the certificate shall be attested to by the importer or his agent on the Invoice or on the face of the entry, in the following form, to be signed by the Importer or Agent, viz.:

"The fowls now imported and entered by the undersigned are the identical fowls described in this invoice or entry."

"Sworn before me
(Signature) .....
"Collector."

Immediately on shipping stock birds to Canada the breeder and exporter should furnish his customer with a certified invoice and declaration of purity of blood with description of fowls shipped and the breed, executed in triplicate. The importer is obliged to present such invoice and certificate when entering such shipment of pure-

BUFF ORPINGTONS
Fashion Plate Strain

Our Standard bred models are in demand in every State and eleven years of trap-nesting goes with every purchase.

100 nicely finished cockerels yet in our surplus yards at $5.00, $10.00, $15.00, $20.00 or $25.00 each. Select your bird and we will fit the quality to your price and give 125 cents in value for every dollar you remit.

200 pullets budding into laying and **50** yearling hens, all raised from our best families of trap-nested layers, going out at $2.50, $3.00, $4.00 and $5.00 each—all pairs, trios or breeding pens mated in the correct blood lines to give **best** results in chicks.

See the 1914 **Orpington Fashion Plate Book,** study the description of our 28 yards and the price of eggs, Fashion Plate Buffs in natural colors, over 40 other illustrations, 56 pages. **FREE.**

A. E. MARTZ & SON **Buff Orpington Specialists** **Box A, ARCADIA, IND.**

bred fowls for entry free of duty. Failure of the shipper and exporter to comply with these regulations will cause the buyer annoyance, delay, and probably cost him a considerable duty fee, on stock which should enter free of duty.

Copy of approved specimen form of Certified Invoice and recommendations as to form of certificate of breeding and purity of blood and any further information may be obtained by applying to the Hon. John McDougald, Commissioner of Customs, Ottawa, Canada.

We urge our United States breeders to make it a point to familiarize themselves with customs requirements when making shipments into foreign countries and to make an effort to comply with all official customs regulations. By doing so you will only be doing your duty by your customer in a foreign land and you will earn his good will and respect by saving him delay, annoyance and unnecessary cost.

Our own government has exceptional facilities for supplying the latest authoritative information concerning foreign tariffs and has prompt notice of all important changes and proposed changes. Breeders can always obtain information concerning their export shipments to any foreign country and the special regulations which must be complied with. For such information address the Bureau of Foreign and Domestic Commerce, Department of Commerce, Washington, D. C.

Importing Poultry and Eggs.

Many readers have asked concerning customs regulations, or duty on eggs for hatching and stock birds brought into the United States from foreign countries.

There has been a mistaken belief that thoroughbred poultry for breeding stock purposes may enter this country duty free. This is not so. Animals registered by the Department of Agriculture may be allowed entry free of duty, but that department has not as yet accepted for registration any animals but mammals. Live poultry is subject to a duty of one cent per pound.

Eggs of poultry may enter the United States free of duty without restriction; eggs of game birds are duty free for propagation under certain special regulations.

Tariff No. 478 of the United States Tariff Act of October 3, 1913, dealing with customs treatment of eggs, is as follows: Free entry for

"Eggs of poultry, birds, fish, and insects (except fish roe preserved for food purposes); Provided, however, That the importation of eggs of game birds or eggs of birds not used for food except specimens for scientific collections, is prohibited: Provided further, That the importation of eggs of game birds for purposes of propagation is hereby authorized, under rules and regulations to be prescribed by the Secretary of the Treasury."

Detailed information concerning the application of the tariff to importations of poultry, or the eggs of game birds for propagation, may be obtained of the Customs Division of the U. S. Treasury Department, Washington, D. C.

Danger in Filth-Fed Eggs.

There is every reason to believe that there is grave danger in eggs from hens that are fed on filth and are scavengers about the farm out-buildings.

A professional man, who is also interested in poultry, writes us from the Northwest of an epidemic of typhoid fever, which he believes he traced to a filth-fed flock of poultry scavengers. Typhoid germs were found in eggs and the eggs were traced to a swill-fed flock ranging on an ill-kept farm. The fowls had the run of the farm, barnyard and privy, and watered at a stream into which a number of privies emptied. The water of this stream was found to be swarming with typhoid

REGAL MATINGS FOR 1914

White Wyandottes

1913 WINNINGS, BOSTON
Cocks, 1-6
Hens, 1-4-5
Ckls., 1-3-4
Plts., 1-3-4
Pens, 2-3-4

NEW YORK STATE FAIR
Cocks, 1-2-3-4-5
Hens, 1-2-3-4
Ckls., 1-2-3-4-5
Plts., 1-2-4-5
Pens (young) 1-2-3-4-5
Pens (old) 1-2-3-4-5

For the season of 1914 I have mated up twenty beautiful exhibition matings. They are all headed by my winning males at Boston and New York State Fair and contain all my exhibition females. My birds are the up-to-date kind, the kind that are winning today. Hundreds of my customers were winners in the shows this winter. Regal White Wyandottes have never avoided competition and no strain has made such consistent winnings in the largest shows. But this is not all; for years they have been bred for heavy egg production and stamina and it is conceded by all that no strain has a better record for usefulness. February 1st we had 420 rugged, thrifty chicks practically out of danger, having lost only 10 chicks to date. Our breeders are in curtain front houses and are the picture of health. Upon my show record and the utility quality of my birds I base my claim that Regal White Wyandottes are the best in the world. My customers will have an opportunity of obtaining eggs from these—the champion matings of the year. If you are starting in, the strain you choose will mean either success or failure for you. Can you make a better choice than the Regal Strain? A few settings of eggs will not cost you a great deal and will prove a good investment. See what one customer says:

Crusader III, a Boston Winner

Adams, N. Y., Dec. 5, 1913.

My chicks are coming on fine. I raised to maturity 23 pullets and 16 cockerels from the eggs I bought of you. They are the nicest, most uniform in size of any I ever raised and all absolutely snow white. Have had scant shade in the yards at that. When I buy Regal stock, I have no trouble in selling the surplus cockerels for more than enough to pay for eggs bought and cost of raising the lot, so my pullets really cost me nothing. The pullets are now laying, and I consider them worth at least $4 each for breeding purposes (being straight Dorcas line stock), so you can see that while I paid a big price for the eggs, I have made several hundred per cent on the investment. Thanking you for prompt service and courteous treatment, I remain,

Yours very truly, A. L. RICE.

EXHIBITION MATINGS, pens 1 to 20 (as they run), $5 per 15, $9 per 30, $12 per 45, $24 per 100. Pens 5 to 12 are special matings. Eggs from special matings only are $10 per 15, $18 per 30, $25 per 45, $50 per 100.

Record Laying Pens (Dorcas Line)

Pens 21 to 26 are headed by males bred from females with high records. Some of these males also have exhibition records. The females in the six pens are composed of yearlings with trap-nest records from 180 to 224, and pullets of the same breeding. From these pens eggs are $5 per 15, $15 per 50, $27 per 100, $50 per 200. Utility matings of vigorous surplus stock—$5 per 50, $9 per 100, $17 per 200, $25 per 300, $75 per 1,000. 500 cocks, hens, cockerels and pullets for sale.

SPECIAL:—50 big, vigorous, stay-white Dorcas cockerels, $10, $15, $20 and $25 each. Dorcas pullets, $5, $8 and $10 each. Utility cockerels, $3 and $5 each.

Free—20 page illustrated catalogue and mating list. It gives full description of my matings for 1914.

John S. Martin : Box 51 : Port Dover, Canada

germs. So far as known no humans ever drank water from this stream, but the fowls did. Cleaning up the farm and stopping the pollution of the stream checked the spread of typhoid. Most of the families affected had been in the habit of getting eggs from this farm because attracted by the low price. Just how much of the trouble was due to filth-fed, filth-watered eggs is problematical; but it is worth thinking about.

We don't believe you want to take a chance with the danger in filth-fed eggs and here is another argument against the cheap eggs imported from China.

———o———

Price Making and Getting the Price.

When you want to buy an incubator or a suit of clothes who is it that fixes or makes the price? The manufacturer.

When you want to buy groceries, provisions, eggs, meat or poultry, who is it that makes the price? The dealers.

Almost everywhere you go to buy, the producer or the dealer tells you what you have to pay. The exceptions to these rules are the farmers and poultrymen. Why? Because this class of producers lack effective organization and cooperation.

When you have farm produce or market poultry and eggs to sell, who is it that fixes or makes the price you must take? The buyer.

You either can't or haven't the nerve, or the power, to set the price on the goods you produce and have to sell. You have to take what you can get. Pretty rotten condition, isn't it?

Find out what it costs you to produce eggs, poultry and any farm products. Study and keep in touch with market conditions. Advertise your wares. Keep quality of your goods at the highest notch. Grade your products and don't mix grades. Use the parcel post to reach consumers direct when you can. Fix your own prices where they will yield a fair profit and insist on getting your own price, not what the buyer chooses to give. Don't get panicy for fear you will get caught now and then with an overstock hard to sell; better an overstock than to always be selling close to cost, or at a loss, and selling at the buyer's price instead of your own.

If you sell to a collector, dealer, or commission man, or any other middleman, you now have to take whatever price he chooses to allow you, you have to accept his weights and such loss and shrinkage as he pleases to claim. Many times you have to pay for this privilege of accepting the buyer's price for your wares by also paying a five per cent commission. How long do you propose to put up with such conditions?

In any location within easy shipping distance of a big city market it costs about 13 to 15 cents a pound to make just common range grown chicken meat. The collector seldom pays any more than that for them alive, but he aims to make not less than 5 to 10 cents a pound profit on them; the jobber gets his profit and so does the retail dealer. Where do you come in?

Specially grown soft meated winter chickens, the kind that are forced to make from 8 to 12 pounds of fancy chicken meat in 22 to 24 weeks, cost pretty close to 18 to 20 cents a pound to bring to ripe marketable perfection. The collector pays you 20 to 25 cents a pound for them at the door. He carts them home, dresses them and ships them to market and aims to make a profit over the price he paid you of 15 cents a pound, to pay him for his trouble. The jobber sells those fancy chickens to the retail dealer for 40 to 45 cents a pound and figures on not less than a 5 cents per pound profit for handling. The retailer charges 50 cents a pound for the dressed chicken which you sold alive for 25 cents a pound. You get soaked and so does the consumer. The middlemen get their profit, they take mighty few chances, but you sell for cost or at a small profit that won't pay living expenses.

If you ship to market direct, under present conditions, you pay the freight, stand all loss and shrinkage, and TAKE WHAT YOU CAN GET. Why not organize your business and set your own prices; make a delivered price and one f. o. b. farm? Work for yourself and for your own interests. Look out for number one. No dealer is going to look out for you if you are careless about your own interests. You are carrying a bag of corn by the middle and it is leaking at both ends; get busy, tie up the ends and stop the leaks.

The consumer cannot expect, considering production expenses and shipping or delivery expenses nowadays, to buy for much if any less than he is now paying for goods of the same quality. The producer must get more for his eggs and poultry if he is to get a living and something more out of the business. Work for yourself. Fix your prices. Try to get on a similar basis with other producers and manufacturers. Tell your customer what he will have to pay, instead of asking him how much he will give. There is only one way to sell goods, and that is to keep your nerve with you, look out for yourself and SELL GOODS.

If you go to a marketman who is now paying a regular collector and shipper 35 cents a pound for chicken meat, the chances are he will slather you with soft words about demand and quality making the price and you will be charmed to learn how good your stuff is and how well it will sell at 30 cents a pound, or 5 cents less a pound than the collector is demanding. If you showed a sample of goods up to mark in quality, and demanded the price, you would get the 35-cent price; but if you haven't the "know," or are weak-kneed about it, you'll get left. There isn't very much pure benevolence and philanthropy hovering around the marts of modern business these days. Every dealer is working for himself. If any man is careless with his money and about disposal of his goods, there is always somebody ready to annex them. WORK FOR YOUR OWN INTERESTS.

———o———

Charles McCaffree for the Executive Board.

The West and Northwest are rapidly gaining ground in the poultry business. Therefore, it is good policy to honor with important office in the American Poultry Association a man who joins with the enterprising spirit of this region a keen interest in poultry breeding. For election to the executive board of the American Poultry Association, this periodical submits the name of Mr. Charles McCaffree, at present commissioner of immigration for the state of South Dakota. To our personal knowledge he is fitted for this office by real

WORLD'S GREATEST STRAIN

Eggs Eggs Eggs Eggs Eggs Eggs Eggs

I have bred White Wyandotte for 20 years and for the season of 1914 have mated 16 grand pens. These pens contain practically all of the 62 birds that made these Indianapolis winnings, and the best birds reared the past three years. Sons, daughters, brothers and sisters of these grand birds. They are mated right and bred right to produce the winners at America's largest and best shows. 64 page 1914 Art Catalogue of America's finest White Wyandottes describing these matings in full free for the asking. (5 Red Stamps appreciated.) Eggs, $5.00 per 15; $9.00 per 30; $14.00 per 50; $25.00 per 100. Eggs from the best of all matings, $10.00, $15.00 and $20.00 per 15. State your wants clearly and address

KEELERSVILLE, Chas. V. Keeler, Prop., R. F. D. 11, Winamac, Indiana

ability, his standing in his community and good judgment and enthusiasm as a poultryman.

With his interest in the welfare of the American Poultry Association, and his power to serve it, Mr. McCaffree would undoubtedly accomplish much in building up the membership of the organization in those states of the West and Northwest contiguous to his own.

As this vast territory is rapidly being peopled, the attention of all its farmers should now be called to the benefits of poultry raising. The Journal believes that the election of Mr. McCaffree to the executive board would not only strengthen the association by his services but would please and interest a great body of western members, whose strong support the association needs and ought to have.

———o———

Do You Want an Expert Poultryman?

The editor of this periodical knows that there are relatively few men who, the magnitude of the poultry industry considered, are really competent all-round breeders and managers. To conduct successfully a large plant in all its details of feeding, mating, hatching, culling, selling and exhibiting requires the services of a man who possesses not only a rounded knowledge but a natural aptitude for the business. There are today in the poultry plants of this country many demands for just such men.

Now, we happen to know of a poultryman of very broad experience in the American breeds; one who has been an exhibitor and constant prize winner at the very largest shows in the country, and who would undertake the management of a plant where he would be given the opportunity to get results. From many years' acquaintance with the gentleman in question we give him an unqualified endorsement. He can conduct a plant successfully to the minutest detail.

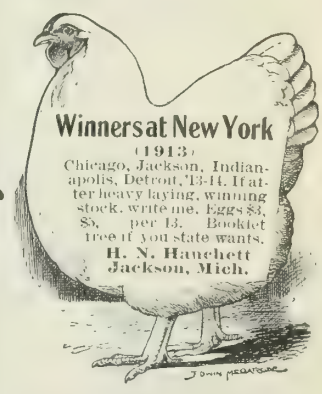
In addition, he is fortunate in having a wife whose knowledge of practical poultry-raising is really equal to his own, and who is also qualified to carry on all correspondence connected with the operation of a successful plant from selling stock and eggs to preparing mating lists and catalog. Any individual or corporation interested in poultry raising and desiring the services of such a highly competent person will, by writing to the editor of the Journal, receive information necessary to opening communication with the gentleman in question.

———o———

A. P. A. to Investigate Advertisements.

The American Poultry Association's quarterly bulletin states editorially that:

"The president expresses his intention of appointing a committee to investigate advertisements which may be complained of as untruthful and misleading as to facts. This appears to be one of the most important moves, intended to correct a great evil against the honest exhibitor and advertiser."



Censoring advertising is a big job and the committee appointed will have plenty of work cut out for it, if the job is to be a thorough one, but we wouldn't want to be in the committeeman's shoes. We get about all the work of censoring advertisements we can stand right now and it is often mighty difficult to say whether our view is right or that of the other fellow. We will be very glad to have the A. P. A. take charge of such work, so long as some one else gets the job. Would suggest that no editor or poultry judge be permitted to serve on this committee and that the president and the secretary be active members of it, with one other member who has been a breeder and advertiser not less than 15 years.

———o———

Coming A. P. A. Election.

The coming annual election of officers of the American Poultry Association excites very little interest. President E. B. Thompson appears certain of re-election with practically no opposition and it is generally conceded that he should have another term in office to complete the work begun and to show what he can do for the association. Secretary Campbell has every reason to expect to be returned to office for another year. Some "new blood" seeks admission to the executive board and A. C. Hawkins, of Massachusetts; John M. Parker, of Montana; and Martin F. Schultes, of Tennessee, have been mentioned. Joseph Russell of Toronto is a new candidate for the first vice presidency and Louis Lee Haggin, of Kentucky, for second.

Several cities want the annual meeting and, quite naturally, we hope the convention will come to Chicago. We believe that Chicago now has first claim

WM. COOK & SONS
ORIGINATORS OF ALL THE ORPINGTON FOWLS & DUCKS
Plants in America, England and Africa Established 1873 : Box A, Scotch Plains, New Jersey

Eventually, if you want the **best Orpingtons** of any variety, you will buy from their **Originators—Why not now?**—And avoid loss and disappointment. We **guarantee** safe delivery and **satisfaction,** backed by a reputation of 41 years standing. This means something to you, when placing your orders.

Our winnings in 1913—356 prizes including **170 Firsts** and 105 Seconds at the **largest** shows in this country. This was the result from our **best matings** and our customers produced from these matings hundreds of first prize winners.

Eggs from our first prize winners and the finest Orpingtons in the world **$20** a setting. From fine stock and our second prize winners **$10** a setting.

Send 10c for illustrated catalog containing history of the origination of the Orpingtons and hints on poultry keeping. **Mating list free.**

Several thousand Orpingtons always for sale in **Black, Buff, White, Diamond, Jubilee, Spangle and Blue, all** of which we **Originated.**

Over **14,000** first prizes won by us. Inspection **cordially** invited, trains met. A visit to our plant will show you that the finest Orpingtons in the world are mated up there. Advice free. We can start you in the poultry business right.

ORNAMENTAL LAND and WATER FOWL FOR SALE

and should have the meeting and we know that our home city will do its utmost to make the convention a most successful and enjoyable one. Therefore we ask YOU to VOTE FOR CHICAGO.

The Ancona World

Which is published at Franklinville, N. Y., has taken over the Campine Herald. They have enlarged in every department, besides adding twelve pages. Advertising rates have been increased, but the subscription price remains the same. This is the fourth successful year of the Ancona World and the third time it has been enlarged. The best wishes of American Poultry Journal in your new venture.

Good News from New Jersey.

A correspondent writes us that a poultry club is being organized in New Jersey that, instead of devoting all its energy to holding an annual show, which often causes the members to dip into their pockets to make good a deficit, will do its best and biggest work by bringing consumers and producers together for mutual benefit.

The plan will be to secure the names of consumers who desire to deal direct with the producers of eggs, poultry, fruit and other farm products and the club exchange will place these names with members who are producers. Advice and assistance will be rendered in securing customers, best way to fill orders, best packages for parcel post delivery, and other details of direct selling by producer to consumer. Club dues are to be moderate and service is expected to be open to all poultrymen and farmers.

This is good news, if true, and we shall await further and detailed information with much interest. We understand that it is the intention of the promoters of this organization to develop the plan in all large cities.

Chicago Coliseum.

In a recent communication from H. W. Deem, of the Buckeye Poultry Yards, Eaton, Ohio, he informs us that there was a mistake made in the printing of the Coliseum catalog.

The catalog gives him 2nd Buckeye cockerel and he informs us that he won 1st cockerel.

He writes asking us to inform our readers of same, as we in our January issue quoted the catalog.

Notice to Show Secretaries.

The sixth annual exhibition of the Coliseum Show will be held in Chicago December 11, 12, 13, 14, 15 and 16, 1914.

Other associations will please make note of these dates and, as near as possible, avoid them. Note this show opens on Friday. Local shows in Illinois and adjoining states will please arrange to close such shows as may be held the week of December 6 Thursday noon, the 10th. This will enable all exhibits to reach Chicago Thursday night.

The following judges have been selected: Illinois, McCord, Hale and Johnston; Iowa, Shellabarger; Missouri, Branch; Wisconsin, Wells and Greenwood; Minnesota, Whitney and Smith; Michigan, Tucker; Ohio, Hark; Indiana, Pierce, Pickett and Clark.

Premium list November 1st. Entries close November 25th. Specialty clubs that are arranging to hold their meetings for 1914 in the West will please correspond with the secretary at once.

Theo. Hewes, Secretary.
Indianapolis, Ind.

DR. WOODS' NOTES AND COMMENT.

We get a good many questions concerning foreign and domestic customs rates and regulations. Readers who desire information on customs duties and customs regulations of foreign countries and any details concerning our own tariff should apply direct to headquarters for same. Make your inquiry in detail and address same to the Bureau of Foreign and Domestic Commerce, Department of Commerce, Washington, D. C.

* * *

From the widely spaced and padded columns of the A. P. A. quarterly bulletin for January, one might assume that the association finds it exceedingly difficult to find sufficient live organization news to fill an eight page quarterly. There seems to be a dearth of official news and information anyway, for mighty little ever comes to our desk. What there is of editorial matter is good and of interest, likewise that part of association matters which is not reprint, but there is a wealth of space padded with heavily leaded lines and big black scare heads and rehashed newspaper stuff old as the hills. Personally we would like some real live information concerning the actual work of the association, but perhaps this is

Important Notice

ART C. GILBERT, THE ORIGINATOR

of the Blue and Cuckoo Orpingtons

Has now gone into partnership with

Mr. Wm. H. Depper of Pine Lodge Farm, South Lincoln, Mass.

We have been preparing for this combination for the last 3 or 4 years by shipping annually many of the originators' best stock birds from England to Pine Lodge Farm, and so getting together a reliable and first class stud. Whilst the main part of the European stock has only shortly arrived at the farm, one large consignment (the last) is still on the ocean coming across. Mr. Gilbert is now settled right here managing the farm. Besides being the originator of the Blues and Cuckoos, he was in Europe generally acknowledged to be the greatest **Breeder** of all varieties of Orpingtons living, so that Pine Lodge Farm Co. is run by experts who know the poultry business right through and therefore, combined with their years of unimpeachable reputation, can be relied on; not only to give you a square deal, but also value for money.

C. S. BYERS (Successful Orpington Specialist 15 Years) HAZELRIGG, IND.

not permitted to go outside the executive board.

* * *

We note from the bulletin above mentioned that the A. P. A. has at last discovered that successful artificial incubation was practiced in Egypt some 5,000 years ago; that ovens were used and heated with smouldering straw, etc. That seems to have something familiar about it, and, now that we think of it, we believe we have read that same information in various poultry books, some of them dating back a good many years. There is nothing like being progressive!

* * *

Soon we shall have another annual election of officers in the American Poultry Association. To date of present writing things appear pretty quiet in association politics. The bulletin tells us that the A. P. A. now has nearly 6,000 members. That "listens good." We'll wager though that a mighty small percentage of members have any idea who is eligible for office, who is willing to run for office, or who they really ought to vote for, for the best interests of the association. It seems to us that even "eighth ward politics" would be preferable to such conservative "progress, purity and protection."

* * *

Under a fat black type head that declaims: "Work for Branches" we find these lines only: "In the future complaints and disputes are to be referred to the branch associations for recommendations." Sixteen words, that's all! If that is all the work there is for branches, why bother with 'em? If we are not mightily mistaken Branch Association work is destined to be the most active and important part of association work and we hope that the new constitution provides for it. But our official bulletin can only find sixteen words in which to cover work for branches in the midst of a desert of wasted space. And we get just four bulletins a year and the "Proceedings!"

* * *

Ex-President Hicks is quoted as suggesting that "the Annual Proceedings should be placed on a self-sustaining basis." Presume that means that members should pay for 'em. In the editorial comment we find the following: "The expenses of the Association are very heavy and it is hoped that all members of committees will reduce the cost of their work to the minimum. Nearly every committee member derives some part of his livelihood from the poultry business in some of its forms and is indirectly helped by the prosperity of the association." Think that over, comment does not seem necessary.

* * *

From the financial statement given in the bulletin it is apparent that the association is able to pay its obligations and have a comfortable sum left in the treasury. After the past two lean years of business we imagine that there are a lot of poultrymen who are mighty glad to find their books balancing even. Living expenses are very heavy these days and most of us are obliged to plug hard most of the time at work that pays cash, and dipping into both time and money to help out work in several associations often proves a drain difficult to sustain. Then when some particular organization begins to preach "duty," "loyalty" and sometimes scolds about "ingratitude," some of us begin to wonder where we come in and just what we really do get out of it anyway. We've a notion that duty and loyalty are virtues that should always work both ways.

* * *

We are glad to note that the April quarterly bulletin will publish the text of the proposed new constitution for American Poultry Association.

* * *

It is evident that so far very few members have taken advantage of the Atlantic City resolution, expressed a willingness to serve the A. P. A. in an official position and notified the secretary that their names might be listed in the bulletin as candidates. Why such exceptional modesty this year? The list of candidates as published is as follows:

President—E. B. Thompson, Amenia, N. Y.

First Vice President—Joseph Russell, Toronto, Ont.

Second Vice President—Arthur A. Peters, Denver, Col.; Louis Lee Haggin, Lexington, Ky.

Secretary—S. T. Campbell, Mansfield, O.

Executive Board—R. E. Bruce, New Orleans, La.; C. M. Bryant, Boston, Mass.; A. C. Hawkins, Lancaster, Mass.; Earl Hemenway, South Haven, Mich.; S. J. Hopper, Dallas, Tex.; Charles McCaffree, Pierre, S. Dak.; N. R. Nye, Leavenworth, Kan.; John M. Parker,

CHRISTIE'S
S. C. White and Brown Leghorns

Having been bred for 14 consecutive years, represented all over the world, they stand today without an equal as egg producers, the foundation upon which all branches of the poultry industry hinge. We have been shipping our

S. C. White and Brown Leghorn Day-Old Chicks and Eggs for Hatching

to all parts of the United States and foreign countries for ten years, and during this time we have shipped over 1,000,000 chicks and 800,000 eggs for hatching, and we have yet to find one displeased customer, a record attained by very few. Before placing your order, write today for our illustrated catalogue, and read what thousands of our pleased patrons say in regard to the **World's Greatest Layers.**

We offer early birds fit to win now. Selected breeding birds mated for best results; a specialty in pens, trios or in larger lots. Write your wants please. It is no trouble to quote you prices and give any desired information.

Schenley Heights Poultry Farm

C. F. Rankin, Proprietor

1202 Commonwealth Bldg. Pittsburgh, Pa.

Creston, Mont.; Martin F. Schultes, Bartlett, Tenn.

The announcement is made that "this notice in no way prevents any member of the Association from becoming a candidate." So far so good, but why such a scarcity of candidates who are willing to announce themselves in the official bulletin? Lets hope that another year the several candidates will come forward promptly with their notification to the secretary, and that accompanying the name of each candidate will be published a brief summary of his qualifications and fitness for office. One may be "a big toad in a small puddle" at home and yet not make a great deal of noise in the world at large, and there are always a lot of fellows "back in the bush" who would like to know and to be informed concerning candidates.

* * *

The bulletin says that these queries are "worthy of a thought" and so we quote them. We imagine that some of these the association would find difficult to answer with a direct "yes" or "no" and have it prove effective or final:

1. "Shall color disqualification be abolished?"
2. "Shall show rules be printed on entry blanks or in the premium lists?"
3. "Shall entries close the date advertised?"
4. "Shall private scoring be discontinued?"
5. "Shall judges be required to fill engagements?"
6. "Shall associations be permitted to cancel engagements with judges?"
7. "Shall exhibitors' names be placed on the coops before judging?"
8. "Shall judges remain at shows one day after their work is completed?"
9. "Shall show rules be enforced?"
10. "Shall the judges have an association?"
11. "Shall all varieties of one breed have the same weight clause?"
12. "Shall surface or under-color be given the preference?"
13. "Shall the association favor the retention of symmetry as one of the sections in the Standard?"

Mr. A. P. A. Member, we suggest that you answer these thirteen questions (don't be afraid of the hoodoo number) and express your opinion concerning them freely and candidly, and mail the result to Secretary S. T. Campbell, Mansfield, Ohio. A symposium of these replies, ably edited, ought to furnish a little "copy" for some future bulletin.

* * *

Chicago wants the annual meeting of the American Poultry Association this year. Vote for it. Other cities that have extended invitations are: Buffalo, Detroit, Houston, Indianapolis, New York, St. Louis, St. Paul, and Washington. We haven't anything against the other cities, but we think Chicago has earned the meeting and deserves to get it. We intend to vote for Chicago, Ill., as the place to hold the 1914 A. P. A. annual convention, and we hope you will vote that way too. Plan to meet us at Chicago and don't fail to vote for Chicago.

* * *

From D. Lincoln Orr, of Orr's Mills, N. Y., we have received a trio of White Faverolles, donated for experimental purposes. They are good, healthy, active specimens and we hope to get

Peerless Poultry Promoter

Port Richmond, N. Y.

enough chicks this season to try them out for practical utility qualities. This French variety has been highly recommended for heavy laying and the production of prime table poultry. At recent shows it attracted the attention of a number of market chicken growers, who want a meaty, big bodied, quick growing chicken. One breeder reported that last season he had range chicks which made 9-pound cockerels and 7½-pound pullets at seven months old. The roaster man wants a quick growing, soft meated chicken that will make 8 to 12 pounds weight in 22 to 24 weeks. It takes a very hardy, quick growing bird to do this. Another thing the roaster man wants is a good supply of hatchable eggs, mostly out of season, and that calls for a combination of fecundity and exceptional constitutional vigor. If the White Faverolles can make good with the meat and eggs desired, we don't believe that the white skin and legs will prove any drawback. Of course many of our markets prefer yellow skin and legs, but a good, big, fine grained, soft meated chicken never has to go begging for a customer on account of color of skin. We hope to get some first-hand information concerning this variety during the coming season.

* * *

We are also indebted to Mr. Orr for a sample of corn from the Argentine. It is a small, hard grained, yellow corn, like our northern flint variety, well cured and sound, and should prove excellent for poultry feeding and making ground chick foods. We understand that most of this corn should arrive in our markets in good condition at just about the time when native grown corn is most troublesome and most liable to spoil. If this is true, then Argentine corn should prove a boon to chicken raisers, for every season spoiled corn and "green-heart" corn, from ill-cured domestic crops, cause an appalling chick mortality.

One of our correspondents, in remarks concerning our recommendation of feeding the live cells of fresh raw vegetable food, refers to whole grains as food made up of dead cells. Had he confined his remarks to ground grains and not included whole grains, the comment might have been well enough, but it is not true that whole grain is made up of dead cells. Whole grains and other seed may be compared with fertile eggs; so long as they are reasonably fresh (still retain the power to germinate) they are very much alive. The germ or heart of the grain is a living organism, just as is the germ of the egg, and whole grains are to be included in live celled foods; at the same time the whole grains do not supply the same desirable qualities to be found in the living cells of fresh raw greens, and fresh raw greens are a very essential and desirable food for poultry where best results are expected.

* * *

I. Putnam, Elmira, N. Y., has sent us a sample of the "Little Putnam Stove," designed to keep the drinking water from freezing. It holds 3½ pints of oil and burns about a month without refilling.

* * *

From Otis and Moe, Chicago, Ill., we have received two sample "never fail" trap nests of galvanized iron. We have had them in use since the New York show and find them practical and effective. It is a well made, moderate

Do you know that the past season has been one of glorious triumphs for my many customers and proves that

KENNEDY'S

IMPROVED CHAMPION STRAIN SILVER AND GOLDEN

CAMPINES

"The fowls with a character all their own" are the aristocrats of the show room in America! They have won the blue and red in the hands of my many customers at every show of note, such as New York, Boston, Baltimore, Philadelphia, Buffalo, Pittsburgh, Cleveland, Chicago, Los Angeles, Atlanta, Kansas City, St. Louis, Allentown, Hagerstown, Syracuse, as well as from coast to coast in Canada. The question no doubt arises in your mind how do I account for these sweeping triumphs of my many customers, it is easily explained in a few words, "I do not exhibit myself, so take great pleasure in fixing you up right for any show and again, I have no special matings for my private use, but in other words, they are all special matings for my customers."

Eggs For Hatching

Now, if you contemplate purchasing eggs for hatching, do not forget that I make a specialty of supplying same from the grandest birds that are properly mated for best results, and they will unquestionably produce winners. My prices for the season are at the rate of 50c each or $7.50 for 15 eggs as they run from all my grand matings, SELECTED EGGS, or in other words, if you already have a flock of Campines and you want eggs selected from my best females or matings that are strong in the points in which your flock is weak, they are $1.00 each or $15.00 for 15 eggs. Order early, as the demand will far exceed my supply, in fact, on Feb. 1st of this season I had nearly 50% more orders booked for shipment after March 1st than I had last season the same time.

Campines Have Made Good
Are Making Good
And Will Do Still Better

CAMPINEOLOGY

Third Edition.

"The story of the living egg machines." The most costly and complete work ever attempted on Campines will be off the press March 15th. It will be an encyclopaedia on this wonderful fowl, going into matters of interest in detail, as well as a work of artists' and printers' art. If you are at all interested in Campines it will be worth dollars to you—ten cents to pay postage on this DE LUXE publication will be appreciated.

Box F **Birch Cliff, Ontario, Canada**

priced nest that will trap the laying hen without fuss or trouble and it is sanitary, easily cleaned and lice-proof, if kept clean.

* * *

Anent poultry feeding there are wide differences of opinion. There are many good methods, almost as many as there are successful poultry keepers. Efficiency in poultry feeding, as in all other work, means the maximum of accomplishment with the minimum of labor. The test of any feeding method is getting results. It is results that you are after and not, as some seem to think, merely saving labor. If saving labor, of itself, were the sole object, why bother to keep poultry at all? If you have a method of feeding that yields you a profitable return, don't be in a hurry to change it for something else.

* * *

We believe in and we have been preaching labor saving to a considerable extent. On most poultry plants big and little there is a lot of labor wasted, and labor costs money, is hard to obtain in many places, and wasting labor is wasting money. But to save labor at the expense of the returns is a still greater waste. In poultry feeding we want to get the best possible returns from our flocks in hatching eggs, chicks, poultry meat and table eggs, not forgetting that always we want the maximum constitutional vigor whatever we are specially working for, and to get it at the lowest cost consistent with good returns. Sensible labor saving methods of feeding will provide for the birds being well fed at all times, keeping the food clean, avoiding waste, and supply a good variety of wholesome foods.

* * *

We are not opposed to hand feeding if the poultry keeper has the time and knows how to feed for best results. Careless hand feeding, more often than not, amounts to stuffing the fowls. We haven't the time to give to hand feeding methods ourselves. It means being on hand at a regular feeding time and taking a good deal of time for the work, and that for us is not possible. We can't hire labor intelligent enough to properly hand feed poultry, at least not at a price we can afford to pay. For that reason we have made a practice of keeping grain before the birds, allowing them to feed themselves with foodstuffs of their own selection from the variety on hand. Many plans were tried and from most of them the results were good, but we wanted to minimize any waste of food, to keep the food clean, to always have the food fresh when supplied, and to avoid obliging the fowls to eat food that had been "nosed over." It was not until we secured a covered metal hopper, worked by the fowls themselves and one that does not feed except when food is wanted, that we secured the results we were looking for. According to the

Tompkins' Winnings—

What They Mean to You, a Possible Buyer

NEVER in all my showing experience have I been up against such keen competition as in the past season. Take the New York show at Madison Square Garden, for instance; there were 300 entries of Rhode Island Reds.

In all that lot there were mighty few below average—you who were there know that full well. Still Tompkins' Strain walked away with seven ribbons and all shape specials on Single Combs, First Cock and the Item Cup being among them.

Now I might make a good winning at one show a year, but fall down on the others—but I don't. At the Palace Show in New York, at Boston and at the Madison Square, New York, Tompkins' birds made big winnings, and each time under different judges.

Another thing to bear in mind, is that this isn't the first year Tompkins has won. **It's the twelfth.** Year after year we have captured Blue Ribbons. My strongest competitors now are birds of my own strain belonging to my customers. They are giving me the merriest kind of a hustle at the shows.

This grand bird won first ribbon and shape special in the December, 1913, Madison Square Show, New York, against the strongest competition I have ever experienced.

At the Palace Show at New York last December, this Tompkins Top Notch Special walked away with the much contested for first prize. First on Rose Comb and first on Single Comb in the one year at different shows awarded by different judges.

Of far more importance to me than all the first and other ribbons I won, is the fact that at all three of the big shows I won Blue Ribbons and specials for Best Display. The real meaning of which is that my strain of Reds **average high right straight through.** It's not a case of picking out a few from a large flock. Every one who knows my little old farm up at Concord, knows I don't carry a big flock of birds, **but those I do have are superior.**

These, then, are the vital things to think about in deciding where to place your egg orders. They are the things that should govern your purchase of pens and single birds whether in rose or single combs.

My Mating List is ready. My new catalog has a full list of my 1913-14 winnings. Send for both. Orders are filled in order received, which means there are sometimes certain advantages in being among the first

LESTER TOMPKINS

Tompkins' Rhode Island Reds

Concord, Massachusetts

RED SUSSEX

FIRST PRIZE PEN CHICAGO AND MAD. SQ. GARDEN, 1913

A. A. CARVER SEVILLE, O.

There is no doubt that the Red Sussex will make a hit with the American Fancier and we believe that at the coming shows they will be represented in greater numbers than any new variety that has been imported during the last few years. There is a reason. Red Sussex are distinctly a surface-colored fowl; no need to worry about under-color. In size they are midway between a Plymouth Rock and an Orpington. They resemble in surface color the Rhode Island Red. Their shape differs from the Red in being deeper from back to keel, and their white skin and legs, abundance of white soft meat, will make them ideal table fowls. The above Pen won first prize at Chicago, New York, Cleveland and Buffalo, and many favorable comments were bestowed upon them by judges, editors and breeders. Carver's Red Farms at Seville, Ohio have mated up a number of Pens for the coming season and will be pleased to send free descriptive matter pertaining to this valuable breed—L. A. Stahmer.

equipment provided, it permitted us to feed some flocks but once a week and others twice a week with excellent results. The saving in food and in labor was considerable.

* * *

During the winter of 1912-13 we carried about 1,500 head of laying stock, in flocks of from 100 to 150 each. For these we used 39 automatic feeders for whole grains and 12 common box hoppers for dry mash. The hoppers were filled up with grain twice a week. Often at feeding time they still contained considerable grain, but the object was to keep them full and to keep a supply of grain always before the fowls. As the feeders feed from the bottom and scatter the grain as they feed, the birds were always sure of a fresh supply of new clean grain. No chance for grain waste, or for scratching over, or nosing over old grain in dirty litter and filth, as the feeders were not worked unless the birds wanted food. There was never any rush at feeding time and the birds did not hang around the hoppers. In fact, only a few out of the flock would usually be found feeding at the same time.

* * *

A friend asks: "Won't they eat too much if they have food before them all the time?" Most assuredly they will not. Take it home to yourself. Suppose you were one member of a colony of 100 or perhaps 2,000 people, all under control of one management which attended to feeding all of you and to keeping you at work. Now, suppose that the feeding van only came around once a day or even three times a day and fed you all quickly, or dumped the food in a long line and then passed on. What would you do? Wouldn't you crowd and scramble for that grub and try to hog all you could to last until next feeding time, whether you wanted it or not at the time? Then suppose that, like the hen, your only way to hold on to the food against time of hunger was to get it into your crop; wouldn't you form the habit of cramming down all the food you could whenever you had the chance? Well, that is the labor-saving kind of hand feeding that seldom yields good results. Now, suppose that for that same colony there were several food stations, always supplied with a variety of food (a never-failing supply of clean, good food) and you knew that whenever you felt hungry you could go to the nearest one and help yourself—what would you do? You would only eat what you wanted, when you wanted it, wouldn't you? Well, that's sane hopper feeding and, properly installed, it is good for small flocks and for big ones.

* * *

It sounds like a lot of work to fill up hoppers once a week or twice a week. It isn't. If the hoppers are properly arranged it is a snap compared with any other plan for scattering food and yet saving loss and waste. The most convenient way to handle grain on a poultry plant is in 2-bushel sacks. After the first purchase you own the sacks and turn the empties in on your bill to pay for new lots. A ton of grain in sacks can be handled in a very short time by any active man. All feeding grains have to be handled in some manner when feeding poultry; the less handling the better if you save waste, keep the grain clean, the birds well fed, and get satisfactory results. Suppose you have 40 half-bushel hoppers to fill twice a week; that is only ten sacks of grain, or about half a ton. Load your wagon or feed car with grain sacks and start out. Throw a sack on your shoulder, grip the tied end in your hand, cut loose the tie-string and without removing the bag from your shoulder you can fill four hoppers in a jiffy. If you must use pails to handle the food it takes a bit longer. Maybe that looks like a job for a husky man. It isn't one for a weakling, but if you lack the strength

500 Cockerels and Pullets for Sale

These birds represent my best breeding quality stock. They are bred from my best lines and I can recommend them to every breeder who wishes to improve his flock and breed choice exhibition and quality birds. They are the kind to bank upon for success. I will sell in lots and quantity to suit, and assure absolute satisfaction.

Selected Breeding Cockerels, $5, $7.50, $10, $15
Selected Breeding Pullets - $3, $4, $5 to $10
Trios - - - $10 up. Pens - - - $15 up.
A Special Pen of Male and 4 Females for - $25

Remember I select and mate all birds sold. Write me your wants.

Eggs for Hatching

Catalogue now on press. Let me send this to you—it tells the story of this line in breedings, winnings, matings, etc. It also describes the birds, with prices and general information. Write today.

C. N. MYERS, Box A, Hanover, Pa.

for the job you won't be tackling a big poultry plant without hired labor, and the only hired labor worth while for a poultry plant is the strong, husky sort; the manager is the man who is to do the brain work, and he can hire the brawn. At all events, we know from actual observation that one intelligent woman, with the care of a house and family on her hands, can and did handle a flock of 2,000 hopper-fed layers successfully and only hired a man for two hours twice a week to do the feeding and cleaning. Running stream supplied the water and she collected and shipped all eggs. Now, isn't it better to lump the feeding into a brief interval two days a week instead of stringing it out every day?

* * *

Where large flocks must be handled, grain can be purchased to best advantage in sacks in mixed car lots. Many nearby elevators will ship at special rates in sealed cars as small an order as five tons. There should be a rat-proof granary on every plant. For poultry plant use we don't like bins of any kind for grain. It costs too much money to build a practical workable elevator with elevated bins and shutes that will work. The kind of shutes that won't work are common on poultry plants equipped with overhead bins. The cleanest way to handle the grain is in sacks stacked log-cabin style on a clean, rat-proof floor, each grain by itself. In spring and warm weather put scantling between the layers of sacks and let the air get to the grain on all sides. Bins get moldy, musty and dusty, the grain heats in them unless great care is exercised and there is much chance of having spoiled or damaged grain. In the spring and summer, elevators find it necessary to keep grain on the move to prevent it from spoiling and a poultry plant can't afford to waste too much time in handling grain. Bought in sacks, kept in sacks until put into the feeders, used up promptly and the old lot used up before starting on the new, is the best plan. When weather is liable to cause heating and spoiling, buy in smaller quantities, as short a rail trip as possible, and use up the grain promptly. In chicken time, the time when we need the best of feeding grains, is the season when corn, cornmeal and cracked corn spoil most quickly. Don't get caught with spoiled corn.

* * *

A poultryman with 10,000 layers tells us that it averages about a ton of grain a day to feed his flocks; of this about one-third is dry mash. He feeds once a week and keeps the grain before the birds all the time in modern hoppers. He says he finds it more convenient and satisfactory to take half a day once a week and make a good job of filling up all feeders, than to trail along with a load of grain for the birds every day, and he thinks he makes better use of his time and that of his two helpers by feeding only once in seven days. Also it gives him a better chance to get good deliveries on supplies and to keep his granary well cleaned up and the food stock fresh and in good order.

* * *

"Many men of many minds" certainly fits the poultry business, for methods of caring for poultry vary widely among successful men. There isn't any one best way, and the best way for each individual is the one that suits him best and yields him best results. Capacity for work and ability to handle detail varies greatly in different individuals. Some men make very hard work of a very simple matter, and others make light work of a difficult job. Success is much more in the man than in the method he employs. It is up to every poultryman to analyze his own capacity and to keep within it. Don't attempt to do more work than you can do well. It may amount to about the same thing in the end, but it always looks better to us for a man to make $1 a head profit on 5,000 birds than to make a profit of 50 cents a head with 10,000. "A little farm well tilled" is a whole lot better than a big one indifferently handled.

* * *

This year, more than ever before, big flock colonies of layers and big brood lots of chicks seem to interest our correspondents. Under some conditions we are in favor of big flocks of layers and good sized flocks of breeders, if the flocks are not too big and if the local conditions are favorable. With big flock colonies of breeders and layers

there is always more risk, more danger from disease, more danger of losses by thieves (furred, feathered or clothed), and greater liability for drones and non-producers to feed on undetected. With flocks where above 500 adults are running together it is not an easy matter to spot those that are "going by" and get rid of them before they become a loss. Up to 500 layers in one colony, the individuals of the flock can be sized up pretty comfortably and rapidly, but double or quadruple that number and it is a very difficult stunt to apprehend and cull out the undesirables. Personally, we wouldn't care for more than 500 in one flock for layers and we would limit the flocks to 150 or 100 or less birds in a colony for breeding purposes. Of all flock units we have ever tried, 100 to 150 breeding females, with 5 to 7 males, have given us the best results in fertility, hatchability and strong chicks.

* * *

Of small chicks in cold brooders we would not have flocks containing more than 50. In most heated brooders of the small individual type we would not want to put over 50 chicks, although there are some brooders that will accommodate from 75 to 100 chicks. We have not yet had sufficient experience with the large flock stove brooders, of the colony type, to feel sure as to the best size for flocks. Some growers appear successful with broods of 800 to 1,000 chicks with one stove brooder and some even brood chicks of different ages together. There is a big risk of loss attached to such methods. Experienced operators of both coal and oil heated colony stove brooders tell us that they prefer broods of 300 to 500 chicks and not over that number. Except in localities where cheap oil can be obtained the coal stove is the most economical to operate and is generally considered to be more safe as a fire insurance risk. For hot-water heated brooder houses 100 chicks is a good brood unit.

* * *

Deep litter feeding is a good thing for the dealer in ready-mixed foods, but is a poor and wasteful method of feeding either chicks or fowls. Much of the food is lost or spoiled in the deep litter. When cleaning time comes for the house or brooder and the litter is removed, it will be found to contain a large amount of wasted grain and especially cracked grain spoiled and unfit for food. If you are a doubter, try it and find out for yourself. We advise against deep litter feeding. It is a lot better to use a thin layer of litter and renew it often, or to use only a sanded or graveled floor.

* * *

Funny how folks differ in opinion. At Boston Show, where some new portable houses were shown, the crowds were about equally divided; some wouldn't have the building for a gift, they said, and others thought it the best thing they had seen and just what they wanted. It really was a very good type of house. Most of us are just about as radical in our likes and dislikes affecting poultry keeping methods and in our choice of a variety. It certainly is a good thing that everybody does not like and does not want the same thing. It would be disastrous if it were otherwise.

One man tells us that fowls hate dry mashes or dry ground grains. Another case of individual viewpoint. We haven't found it so. Some millstuffs, and particularly some different brands of the same millstuff, are less liked than others, but our fowls have always taken to dry mashes like children to candy. Let any of our birds get into the barn now and the first chance they get they pick a hole in a ground oats or a cornmeal or a mixed mash bag. There are always whole grains more convenient of access, but the ground stuff has the call. Likewise our young chicks are always very fond of dry mash mixtures, which we serve fresh ground. We have heard too of fowls that "hate" oats, but ours always eat oats freely and appear to like them. Of course we always feed good, fat, sound, heavy oats. We wouldn't blame any bird for not taking kindly to lightweight, inferior grade oats that are mostly all hull.

300,000 BETTER HATCHED CHICKS For 1914

It is not now a question of whether to buy chicks, but where to buy them—you want quality, vitality, quick and efficient service, with prices that are not unreasonable. We have hatched and delivered chicks for four years, beginning with a capacity of 8,000 eggs, until now we can accommodate 100,000 eggs at one time. We have not advertised extensively; our customers come back each season with increased orders. There is a reason—it's the "BETTER HATCHED" chicks that people demand; we use no coal or lamps for heating, our hot-water boilers are all heated with natural gas, assuring a uniform temperature; no prematurely hatched chicks, no delayed hatches, every chick hatched in pure air and out on time; they are the ones that can travel 2,000 miles, grow every mile of the way, arrive strong and healthy and continue to thrive.

The 10,000 pure bred hens that lay eggs for this plant are all on free range, healthy, strong and full of vigor. If you desire chicks from this kind of stock, with a strong guarantee behind them, in lots of 25 to 2,000, send for our free catalog, describing our plant and the following varieties of fowls:—**S. C. White Leghorns, S. C. Brown Leghorns, S. C. Buff Leghorns, Barred Rocks, White Rocks, S. C. and R. C. Reds, S. C. Black Minorcas, White Wyandottes, S. C. White Orpingtons, S. C. Buff Orpingtons.**

We quote wholesale prices in lots of 500 and over. We make a specialty of White Leghorns and Barred Rocks in thousand lots. Deliveries begin March 1st. A hatch each week.

The Co-Operative Breeding and Hatching Co., Box A, Tiro, Ohio

ary Writer's Magazine. That reference to "space filling 'bunk'," listens good:

"The man who writes good articles for the agricultural press must know what he is talking about and write facts gained by actually observing the farm operations. The agricultural journals appreciate and are willing to pay for the story that tells how some man has done something worth while. The story that has the true ring and is written strictly from the farmer's viewpoint is sure of a reception in the office of some of our agricultural journals. The day of space filling "bunk" is nearly over in the field of agricultural journalism and the man who cannot tell a big story in a few words should not try to pad out wonderful effusions for the edification of the American farmer."

* * *

Judging from the remarks of our friend and associate, H. H. Stoddard, in his article elsewhere in this issue, he isn't having very satisfactory results with dry mashes and dry bran feeding on his Texas poultry plant. Still, that need not result in a sweeping condemnation of feeding ground grain mixtures dry. Personally, with flocks varying from 50 to 5,000, during the past dozen or more years, we have used dry mash feeding for chicks and fowls with entirely satisfactory results. Thousands of poultrymen all over the country are successfully using dry ground grain and millstuff mixtures fed dry. If we did not believe in dry mashes and know from experience that properly used they give good results, we wouldn't recommend them. Mr. Stoddard is poultry keeping in Texas, and from his descriptions we should judge a rather dry section most of the time. That may, in part, account for his difficulty. Whatever the trouble, it is certain that there will always be controversy concerning dry vs. wet or moist mashes, and there will ever be advocates of both. When we sat down to write this we had only very recently returned from filling up dry bran and dry mash hoppers, which were empty, though we had filled them full two weeks ago, and with our flocks, we had figured on the supply lasting three weeks or a month. Fowls are certainly creatures of habit and maybe they adapt themselves to the notions of their keeper. We have tried a wide range of dry mash mixtures and plain bran and "mixed feed," a mixture of bran and middlings (shorts), or a mixture of "mixed feed" with beef scraps, and sometimes fish scraps, too. The latter combination feeds out best. For economy in feeding (because of greater volume of mash eaten) we have had fine results with a more elaborate dry mash, which our birds always take to like a child to candy; it is made as follows: Fine ground heavy oats, 100 pounds; corn meal, 100 pounds; gluten feed, 100 pounds; white shorts (best wheat middlings, or the lowest grade of flour, and on our market as white Canada shorts), 100 pounds; coarse bran (wheat), 100 pounds; best quality beef scraps, 100 pounds; best cut clover or cut alfalfa (full of leaf), 100 pounds; fine salt, about 5 pounds (unless the scraps are salty, when use half the quantity). When available, add from 25 to 50 pounds of best quality fish scraps specially prepared for poultry feeding. Where all grains and mashes are hopper fed we find the fowls will eat from 20 to 30 pounds of mash to every 60 pounds of whole grains.

* * *

Several years ago we ran an experiment of hopper feeding only whole grains and beef scraps in addition to green foods (no mashes of any sort) and carried it out for two years with the same lot of birds. During that two-year test the only grains used were whole yellow corn and whole heavy white oats (the sort that run 40 to 42 pounds to the struck bushel). The proportions of each grain consumed varied from about half-and-half in summer to one-third oats and two-thirds corn in winter. Beef scrap was before the birds all the time in an open hopper and of course they had gravel, shells, an abundance of greens and plenty of water. The test was made with White Wyandottes and we never had birds produce eggs any better, both as pullets and as yearlings, and such eggs as we tried proved fertile and hatched well. We worked into dry mashes again because we wanted to lessen the cost of production, and so far, we are disposed to believe that it helps a little. Then, too, we wanted to give the birds a rather wider choice of foods and, as we live to learn, we are constantly making tests of one sort or another. However, we haven't much patience with any plan that does not bring reasonably prompt results, for we can't keep hens unless they pay their way and show a fair profit. As staple feeding grains, we like best corn, oats and wheat.

Fed from on top through a hopper; no chance of coal clogging.

Only stove with top and bottom drafts, which, in conjunction with inside damper, are regulated unerringly by our special thermostat.

If you have brooder troubles or want to start your brooding with certainty of success, WRITE US

MACKAY COLONY BROODER CO.

Bonaparte Park Poultry Ranch Box 24, BORDENTOWN, N. J.

Madison Square Garden.

Editor American Poultry Journal.

Dear Sir:—Will you permit me to thank you for the complete and courteous manner in which you handled the reports of our twenty-fifth anniversary?

I am taking the liberty of trespassing upon your columns to straighten out some unfinished business.

First—Will all those who have not received their prize ribbons kindly communicate with me in order that they may receive these ribbons forthwith? I cannot tell who failed to get their ribbons in the last moments of the show unless I receive a communication from such exhibitors. Thus far we have sent out all the ribbons we knew had not been delivered.

Secondly—I believe that at our next exhibition the uncooping and the cooping arrangements of the show can be improved upon.

Not many errors were made, considering the size of the entry, but a few mistakes did occur, and we wish to eliminate all of these. In one particular case the male heading the Black Orpington pen of Mr. L. O. Kettering, of Pittsburgh, was evidently removed from the pen by some unauthorized person so that this pen had to be passed over in the judging, although the male was subsequently found and returned at the end of the show to the exhibitor in good condition. Mr. Delano, the judge of this variety, saw this male bird subsequently at Pittsburgh and stated to me that if the pen had been intact when he was judging the birds would have received third or better. We must apologize to Mr. Kettering for the occurrence which, however, we believe not to have been the fault of the management.

The attention of intending exhibitors at our show is called to the fact that they must not appropriate coops which do not belong to them. Several cases of this kind occurred, thus entailing considerable more work upon the part of the management in finding the owners of the birds wrongly placed and getting them to unlock the coops so that the proper specimens could be penned therein. There will be a rule on this subject at our next exhibition.

Thirdly—I do not handle the sale of marked catalogs, but all moneys received in payment therefor are turned over to Mr. Harry M. Stevens, of Madison Square Garden, the publisher. Will those persons, therefore, who have not yet received catalogs kindly communicate with Mr. Stevens to that effect?

Finally, I wish to heartily thank our very large list of exhibitors for their sportsmanlike spirit, courtesy and forbearance during the show and to assure them that it is my object and purpose to do everything in my power to make "America's Leading Show" as convenient, up to date and satisfactory in all departments as possible. Yours very truly,

Charles D. Cleveland, Secretary.

SILVER GOLDEN **CAMPINES**

Pinehurst Silvers won at Cleveland in fast company, First Cockerel, First and Third Pullet and Second Pen on five entries. Choice Cockerels for sale. Grand Pens mated for egg trade.

PINEHURST FARM, G. M. Smith, Prop., OBERLIN, OHIO

What Happened to Duston's White Wyandottes in 1913

Only this: They won in January at the National Club meet, 304 birds competing 2nd, 3rd and 4th cocks; 3rd hen, 1st, 2nd, 5th and 6th ckls., 2nd and 6th pullets, 2nd pen old and 2nd pen young. My young pen was way over anything shown, but the judge found a slight defect in ckls. wing and set the pen back. I won 1st collection or display, sweep stakes in the American class, whitest cockerel in the show, best shaped Wyandotte cockerel, best Wyandotte in the show, winning about $180.00 in cash prizes, and I was obliged to fit my birds the week I judged a big class at Boston.

Again, at Madison Square Dec. 1913, they won 1st ckl., 1st, 3rd and 4th pullets, 2nd and 3rd ckls., 4th and 5th hens, 5th pen. Silver cup for best 2 in each class and special for **best Wyandotte in the whole show, all varieties competing,** and to round out the show season

FIRST BOSTON COCKEREL

was hatched from a pen I sold. (Mr. Johule insisted I have the benefit of this) most people would be satisfied with such a showing for one year, but such letters as the following really give me more pleasure:

Dear Sir: Jan. 17, 1914, Wis.

It pleases me very much to advise you that the pair of White Wyandottes which you recently forwarded to me at ———, Wis., to be exhibited at the Wisconsin Poultry Association Show, exceeded my fondest expectations. I won 1st Ckl., 1st Pullet, best shaped male, and best colored female. The Ckl. was the best in the twelve most popular classes, thereby winning a gold band, etc. Yours very truly,

———— ————.

Now you want and need this kind of stock and service. I have left to sell elegant breeders in males and females and eggs ready to ship from the same quality. **The cream of the flock,** mating list free.

Eggs, $10.00 setting; two settings, $18.00; three settings, $25,00, and $50.00 in hundred lots.

Send 15c for handsome illustrated catalogue to the specialist.

The High Cost of Living — How It May Be Reduced.

BY O. W. ALDRICH

THE main factor in the high cost of living at the present time is the increased cost of animal food. Vegetables, in their season, fruit, especially subtropical varieties, such as oranges, grape fruit, lemons, etc., sugar and breadstuffs are but little, if any, higher than in former years; these things have not advanced more than the price of labor during the past ten years. One great advance is in the cost of meats, eggs and poultry.

The cry of the newspapers, "Back to the land," will not result in a decrease in prices of these commodities; to buy or even rent land requires capital, and the city laborer who has not acquired a home has not the capital to buy or even to stock a farm. If he is a skillful mechanic, he can make more at his trade than by changing to agricultural labor, and one might as well expect to succeed at any trade without training as to succeed at farming without knowing anything about the business.

The cost of meat cannot be expected to decrease under present or prospective conditions; there are no longer vast areas of vacant lands for pasturage, and the remedies suggested by some wiseacres are too silly to receive much attention. One of them is to pass laws to forbid the killing of calves for veal and compel dairymen to raise all male calves to beef size. Such persons do not seem to know that no person in this business can raise a calf of the small breeds, such as Jerseys, to the age for beef for the price they would bring for beef; that the loss of milk, the cost of food and the labor would force nearly every dairy out of business. Then the removal of the tariff on wool, which may reduce the price of a suit of clothes a few cents may, and will in all probability, reduce the keeping of sheep, and result in the decrease of mutton, and it is not at all probable that the importation of meats from Australia and Argentina will reduce the prices here, as this will not be less than arises from the demand for meats from the natives of Europe, which must receive a great proportion of their supply from abroad.

If these things are true, and we believe no well informed person will deny them, how can the prices of animal food be reduced, or even be maintained at the present standard? Of course, if the people will adopt the vegetarian standard, or be willing to eat meat once or twice a week only, as the laboring classes in many of the foreign countries are compelled to do, the lessened demand might reduce the prices, but this change in the habits of the American people will only take place under absolute necessity.

Our only hope, therefore, of even maintaining present prices of animal food is in a very large increase of the poultry industry. Of course, it is known to all intelligent persons that it is now one of the most important of any of the agricultural productions, and that its destruction would be one of the greatest calamities that could befall the country.

That this increase is desirable is seen in the fact that the Country Gentleman is arranging to publish a series of articles to induce the farmers to engage more extensively in the poultry industry. This is very laudable, and it is to be hoped will have a beneficial effect.

There is, however, a class of people that should be induced to engage in this work which at present seems to have been overlooked. Of course we have all heard of the back-lotters in the cities, who have been led to expect to make five or six hundred dollars a year from ten or twelve fowls kept in a piano box or a dry goods box, but we do not see so much advertising of this way of becoming wealthy of late. But there is a large and increasing class of people, who might make a decided reduction in the cost of their own living, and live far better than they have been doing, at much less cost.

This class consists of the suburban and village people; suburban roads run out from almost every city in the land to villages so near the cities that many of the residents do business in the towns, and suburban additions are planted all along these railways. Nearly all the lots in the villages and suburban additions are large enough to have gardens, and also to enable the owners to engage in the rearing of poul-

try for their own use, and thus provide a supply of fresh eggs and meat for their own tables.

A poultry house large enough to keep enough fowls to supply the family, with the fencing of a grass plot to keep the birds, can be erected at a small expense, and with the trimmings from the vegetables, the scraps from the table, and a comparatively small outlay for feed, will not only supply the wants of the family, but frequently enable them to more than meet the whole expense from the surplus of their eggs and fowls.

By subscribing to one or two of the best poultry journals, even the novice can soon learn to properly care for the few fowls necessary to keep, and many of the leading breeders supply their customers with books, which, if studied and their advice followed, will almost certainly insure success.

In starting anew to raise a supply of poultry for the family, the beginner will, of course, be obliged to consider the variety to be purchased, and many will have already made up their minds, but there are certain things to be considered in this matter, which differs from that of the commercial farm, or even that of the ordinary farmer, or of the fancier or exhibition breeder.

The villager or suburban resident cannot let his birds have free range. He must, therefore, select a variety which will stand confinement in a limited space, without too much expense of fencing. He will want not only eggs, but want them at a time when they are scarce and high priced; he will not wish to pay 40 to 50 cents per dozen for himself and sell his surplus at 15 to 18 cents. He will want a bird that will grow quickly to broiler size, if he likes fried or boiled chicken, and which, if desired for boiling or roasting, will make, when grown, a meal for an ordinary family. If he and his wife are connoisseurs they will wish a fowl which, when roasted, will be sweet, tender and fine grained, one which they would not be ashamed to offer to any of their guests, who have to depend upon the market for their supply. The lady will want birds which are quiet and docile, and which she can pet and be proud to show to her friends from the city, and which, if she feels like it, she can exhibit at her local shows.

To fill all these demands the writer believes there is no variety of birds superior to the S. C. White Orpington.

The Golden Road to Success

ALDRICH CHICK GROWER, a Specific for Bowel Trouble, and BONE-A-TONE, a Bone-Producing, Health-Giving Tonic.

READ CAREFULLY THE EVIDENCE OF AMERICA'S MOST NOTED POULTRYMEN:

Hope, Indiana.

Gentlemen: I wish to state that Aldrich Chick Grower reached us in due time, and I must say it is **without doubt** the Greatest Remedy we ever used along this line, and we have been raising fancy poultry since 1883. It is a frame builder and a body vitalizer. We have never used anything that made chicks grow up so readily as your Chick Grower. I can truthfully recommend to all poultry raisers this **Great Remedy,** and I assure you as long as you manufacture it and it proves the good merit it has this season we will continue to purchase it of you and order more in a few days. I note what you say in regard to BONE-A-TONE. I would like very much for you to send me a quart. It is surely a good Tonic, as you have given size and fast growth to your stock.

Wishing you every success, we remain,
Very respectfully yours, J. C. FISHEL & SON.

Collegeville, Pa.

Dear Sirs: It gives me great pleasure to report that your CHICK GROWER and DIARRHEA REMEDY is one of the Greatest Remedies that the poultryman has ever been able to get hold of. It is surely a wonder. I cannot recommend it too highly. Wishing you every success, I beg to remain,
Yours truly, F. G. BEAN.

NOTE.—Judge Bean judged the pens and females in the White Orpington class last December at MADISON SQUARE GARDEN.

CORDOVA, ALA.

Aldrich Poultry Remedy Co.

Dear Sirs: I have given your WHITE DIARRHEA REMEDY a most thorough test. While I have lost **at least** 50 per cent of all chicks hatched during the last two years by **this scourge, I HAVE NOT LOST A SINGLE CHICK** since using your REMEDY. I DO NOT GUESS about it, for I know it to be both a cure and an ABSOLUTE PREVENTATIVE. To test it I would divide the hatch and feed exactly the same, but give one-half of chicks the Remedy in their drinking water and the other the plain water. **NOT A SYMPTOM** ever appeared in the flock given the Remedy, while in 3 or 4 days the others were all stuck up with white diarrhea. I would put them on the treatment and all chicks that were able to eat and drink QUICKLY RECOVERED, and not another chick became affected, although the sick and well chicks remained together.

I consider your cure **The Greatest Blessing** for the poultry interest of any discovery in 25 years.

Respectfully, POPE M. LONG.
Breeder of Silver and Partridge Wyandottes.

The above evidence is proof conclusive of the merits of THE NEW DISCOVERIES made by Messrs. Rawnsley and Aldrich.

PRICES: ALDRICH CHICK GROWER, $1.00 per quart jar, enough to raise 100 chicks beyond the danger point.
BONE-A-TONE, $2.00 per quart.

DON'T LOSE YOUR CHICKS when an ABSOLUTE REMEDY can be secured at a nominal cost

ALDRICH POULTRY REMEDY CO. :: 4045 North High Street :: COLUMBUS, OHIO

This bird can be kept in by a 4½-foot fence, can do with a limited grass plot, and is very docile and gentle; when it is used to a person it can be handled and taught to pose and likes to be petted. It is not claimed that it will lay a greater number of eggs in a year than some of the other popular varieties, but that no other breed will lay more at the time the prices are the highest.

By actual test it is found that young cockerels can be raised to the weight of 1½ pounds in six weeks and 2 pounds at 8 weeks if properly fed. A hen will weigh 6½ to 10 pounds, the standard weight being 8 pounds, and cockerels have been shown at the shows this winter at 10 months' old weighing 11 pounds, although the standard is 8½, and the standard weight of the cock is 10 pounds.

We read of the capons, and know the prices charged in the eastern cities for the celebrated soft rooster. It is not necessary to caponize a single comb White Orpington in order to obtain either size or quality, if he is fed as capons are fed. A cockerel weighing 10 pounds at 9 months of age is as large as any fine grained capon, and the person once tasting the flesh of such a cockerel, will never ask for a capon if he can get a bird of this class. The man, or his wife, or children, will never be ashamed to let their city friends see his flock of single combed White Orpingtons if they have received proper attention and care, for there is no more beautiful variety known—pure white, with their red combs and wattles against the background of green—they are the joy and pride of their owners. The birds of true type of this variety are unsurpassed for symmetry, and this is especially true of the lordly cock.

Let anyone look through the columns of the poultry journals and compare the plates and cuts of the various classes, and we believe that a person of any artistic taste will readily admit that the White Orpington male bird has no superior, if he has a peer, in any other variety.

If the editor thinks it worth while, the writer will be glad to give some of the particulars in regard to the buildings, yards, selection of birds, and their care, for the benefit of those with but little experience.

Who's Who In Hendom.

BY AMOS BURHANS

AND now the Panama-Pacific Exposition is going to eclipse all poultry show efforts and show us just what a real poultry show is and how to handle it!

That's fine!

I'm for it, you're for it, and everybody is for it! So who can be against it?

"No one at all," answers Reason, after having driven Sectionalism from her bed.

And then, after the officials of the live stock department said unto themselves in conclave privy, "We will hold a great poultry exhibition," they set about to beat the bush, looking for whom they might depend on to unite all fanciers in the undertaking with them.

But they have to beat no further! From out the higher atmosphere there circled a halo, which halo fluttering above the heads of first this one and then that, finally settled upon the poll of one Californian beloved of all henists, a chickenish gentleman known from the wilds of Tibet to the plains of Petaluma and even beyond. And

ROSE'S ORPINGTONS

BUFFS and BLACKS

First Prize Pen at Madison Square Garden. The finest Buff Orpington Pen ever shown.

"LIKE BEGETS LIKE."

My Buffs have the correct color, the color that you must have to win. If your birds lack type, color, bone, introduce my stock. Neither in England, the home of the Orpington, nor in America, can you obtain such quality and value in Buffs or Black Orpingtons as I offer you. Rose's Orpingtons, Buffs and Blacks are bred to win in the strongest competition.

The most wonderful record of the year—backed by stamina and blood lines that will **produce.**

During the 1913-14 show season, at America's two leading shows, **Madison Square Garden** and **Chicago Coliseum**—in the best classes of the breed and in competition with nearly every prominent breeder, **my Buff Orpingtons won more first prizes than all competitors combined.** Consider the following winnings and decide for yourself who has **the best Buff Orpingtons:**

MADISON SQUARE GARDEN

Dec. 26-31, 1913.

1st pen, 5 cock, 3 hen, 1-5 cockerel, 1-4 pullet.

CHICAGO COLISEUM

Dec. 12-17, 1913.

1-2-5 cock, 3 hen, 1-5 cockerel, 1-2 pullet, 3 pen.

This remarkable record, including 6 of 11 first prizes awarded, establishes beyond all doubt the superiority of Rose's Orpingtons.

A Black Orpington Record That Stands for Something—That Means Something to You

During the past three years my Black Orpingtons have won the Championship at Madison Square Garden, Boston, Baltimore, Pittsburgh, Toronto, Hagerstown, Allentown and New York State Fair. This is the most remarkable record established by any breeder of any variety. In this series of triumphs ten different judges have placed the seal of approval by awarding them highest honors.

During 1913 Rose's Black Orpingtons won 27 firsts of a possible 33 firsts at six shows of national reputation, viz.: Boston, Allentown, Hagerstown, New York State Fair, Toronto and Chicago. Five times out of six at these shows they won the Championship for Best Display.

1913-14 Black Orpington Club Show, Pittsburgh, January, 1914

They won as follows: 1-2-4-7-8 cocks; 1-3-4-8 cockerels; 1-2-4-6 hens; 1-3-4-5-8 pullets; 2 old pen; 1st young pen.

BRED IN THE RIGOROUS CANADIAN CLIMATE.

They are hardy, rapid growers and splendid winter layers, characteristics you need to make your Orpingtons suit you to a "T." I can furnish a number of high class breeding males, also pairs, trios and breeding pens that will be carefully mated to produce the best results at "live and let live" prices. Send your wants and let me furnish description and quote prices.

Send for handsome new catalog and mating list containing illustrations of my prize winners, including full page color plate of my first prize cockerel at Madison Square Garden, in natural colors. It is free for the asking.

MY EGGS ARE THE BEST MONEY CAN BUY.

I wish every reader of this Journal could visit my farm and inspect my matings for 1914. Prominent breeders and judges who have seen them declare them unequalled. Every pen is headed by a prize winner or a near relation. If you desire eggs that will produce winners at next season's shows you cannot afford to overlook this opportunity. Better values do not exist anywhere.

HUGH A. ROSE

FONTHILL, ONTARIO, CANADA

that halo did not totter about on the head of this gent from the land of the Big White Egg. It simply ruffled its feathers, as it were, like the broody Brahma, shuffled the eggs under itself, and set down for keeps to hatch out ideas that would make this coming 1915 congress of poultrydom at Frisco one Great Cackle, otherwise known as Success.

And that is how Lyman C. Byce, human dynamo, poultryman, manufacturer and gentleman who wants the White Leghorn placed upon the dollar instead of the American eagle, comes by the honor of being settled upon by the halo of public opinion as being the best man to guide the destinies of the World's Greatest Poultry Show and Exposition at San Francisco in the year 1915.

Mr. P. Opinion is right, as he always is.

He knows just who measures up to the mark of carrying this thing to a generous success and by the rule of allowing power to flow to the man who knows and genius to the man who does things, he has hit the bull's-eye in electing Byce, L. C., to the post.

I am not going to wander off into a state of hypnotism and tell you where L. C. was born, of what parentage, and all that rigamarole. It sufficeth to say that in his never-yet-penned biography there will be that truly trenchant line about his being from earliest childhood a lover of pure bred fowls and a breeder of them. Miller Purvis has been elected to write this and as soon as it makes its debut (pronounced deebyou) I will communicate with you, fairest Petaluma. Byce doesn't need it. He can get along without it. He wouldn't have it served to him on a silver salver, despite the very fact that it is true, literally and figuratively.

What particularly interests us is that Lyman C. Byce has been the mainstay, the mast and the sail of the Fancy on the Coast since the whangdoodle mourned for its firstborn. Who but he could have proven to any hen-minded chicken that she was wasting her time trying to incubate when Byce was around with a Petaluma? Answer me that!

Isn't he the daddy of a dozen million chickens out there on the Coast, and are there not thousands and tens of thousands of them coining eggs from wheat and alfalfa—eggs that sell on the Frisco market for dimes, dollars and doughnuts? Answer me that!

Has he ever refused to do what he could for the good of the industry, for the good of those who have their faith and fortunes wrapped up in it, for the wonderful business it represents? Answer me that!

Those of us here in the great corn and alfalfa belt of the middle west little know the wonderful Fancy and Practical Poultry Business that has been built up across the desert and beyond the Rockies, in that glorious Coastland where lies the wonderful Valley of the Moon. We forget what a steady stream of wealth it has poured into the laps of those breeders of the East who have tried to help them breed better birds since the Fancy out there was in its infancy. And those of us

DRY MASH HOPPER

"Give the laying hen a chance" by installing the

Gillette Poultry Hoppers

The Gillette Automatic Hopper is ball bearing, the wood bait bar eliminates all danger of broken beaks. Baby chicks use the Gillette when three days old. You secure positive regulation and agitation in the Gillette Automatic Hopper. The Gillette Dry Mash Hopper fills from the top and is made in several sizes. It is the hanging type of hopper that feeds from two sides. The Gillette method of agitation brings down the grain as the birds eat it. The main supply is always clean as well as the small portion exposed to the birds. Waste and clogging are positively eliminated.

The Gillette Hoppers are delivered anywhere east of the Mississippi River in the United States. Proper allowance made for those west of the River.

who have been in the mart with our appliances for the cultivation of the chick and the hen have also reaped of the gold sent from yon side the Big Mountings.

Wherefore it behooves us to support this pillar of the Coastal Fancy for the position of Superintendent of Poultry at the Panama-Pacific by making our wants known to the Live Stock Department of that exposition. Let's all get behind and push! Let's all lend a hand and a stamp and a pen to put this man, who can make the world of hendom appreciate his efforts as superintendent, right in the saddle where he can guide it to a brilliant and successful completion.

We can do it!

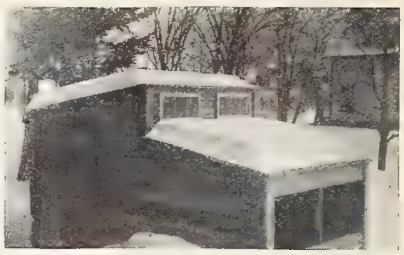
Man the guns!!

Leave the rest of it to Lyman C. Byce, of Petaluma, California.

Success With Severe Test of Woods' House.

Editor American Poultry Journal:

I thought you might like to know the experience I have had in this cold country (Vermont) with the Woods' open-front poultry house. I built one of these houses soon after Dr. Woods first published the plans. I lacked space at that time and so made my house 6 feet wide by 12 feet deep. I have kept about twenty birds in it ever since and have never had a case of roup or any other kind of sickness in this fresh air flock, but I have had plenty of troubles with my birds in two old-style closed houses with high fronts. Have had no trouble at all in the open-front house, but have averaged to lose four or five birds a year from the closed houses.

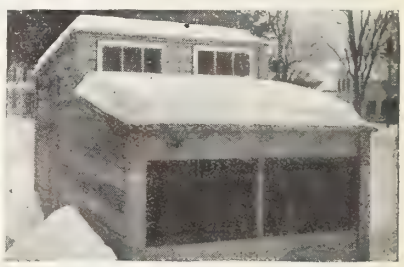


Two years ago we had winter weather when the mercury dropped to 38 degrees below zero (F.), and this year has been down to 35 degrees below, and was 25 degrees below zero yesterday

South front view of Woods' open-air poultry house, 6x12 ft. Built by B. L. Billings, Springfield, Vt. House is built of novelty siding, lined with heavy building paper and is roofed with Neponset roofing. Photo taken before snow came.

morning (January 23, 1914), and today it is raining; so you see it is quite a stunt to take care of 130 degrees variation in temperature in so short a time.

The Woods' house proved such a success that I built another last fall, and am sending you photos of same before and after snow came. I have twenty R. I. Red pullets in this house and am getting better than a 50 per cent egg yield this winter. I have not tried these open-front houses on an extensive scale, but I think you will agree with me that I have given them a pretty severe and thorough trial. I have been very successful and I do not see how anyone can keep hens in a cold country and do without open-front houses. This last house cost me less than $25 com-



Side view of 6x12 Woods' open-air poultry house used by B. L. Billings, Springfield, Vt. Last January made a record for severe winter weather and sudden weather changes. Within two days this house had to take care of a temperature change of 130 degrees. One day the temperature ranged from 25 to 35 degrees below zero and the next day it was raining and mild. There were 20 R. I. Red pullets in this house, comfortable all the time and averaging better than ten eggs a day.

plete, including labor. It is built of novelty siding lined with heavy building paper and roofed with Neponset roofing. It has no windows except those shown in the half-monitor top.

Springfield, Vt. B. L. Billings.

(Note.—The Woods' open-front, open-air house is fully described with building instructions, plans and photographs,

Front view of 6x12 Woods' open-air poultry house in mid-winter as used by B. L. Billings, Springfield, Vt. Front is always open and fowls were always healthy and comfortable, even at 35 degrees below zero.

in the attractive cloth-bound book entitled "Open-Air Poultry Houses for All Climates." This book may be ordered of our Book Department, Chicago office, and will be sent postpaid for 75 cents.—Publishers A. P. J.)

March—The hatching season is open.

* * *

Look over your matings again for possible improvement.

* * *

Breed from the best, and breed all you can. Poultry prospects never were better.

* * *

The breeders report with confidence for the future, and, better still, they are well prepared for all that comes.

* * *

The chance for success is up to you, if you will but try; so try and keep on trying. Reach for success, for it is not very liable to drop without a pull from you.

* * *

Aim this year to improve your stock. Do it now; time is worth more than money and just one good bird is worth the cost of several settings of eggs.

* * *

Poultry mustard stimulates layers and improves fertility. We feed it regularly with satisfactory results.

* * *

Rooster—What's troubling you, my dear?

Hen—I've mislaid an egg.

* * *

A Tarrytown, N. Y., man with a hen in a basket found himself broke after boarding a car at White Plains, N. Y. Then the hen cackled and the conductor took the egg for the car fare. Bet she was a Plymouth Rock.

* * *

Vote to put exhibitors' names on all coops before judging, thereby to place the poultry industry on the highest plane above suspicion. Have confidence in your judges, for if unworthy you will find them out quickly this way.

* * *

Atherton still insists the wind took his hat that Tuesday morning. Cruel wind! He needed a new one, anyway.

One step won't take you far; you've got to keep on walking. One word won't tell the folks who you are—you've got to keep on talking (advertise).

* * *

Chicago, Detroit and Indianapolis are after the A. P. A. meeting. It is a mid-west season and the lake breezes of Chicago look very good to us.

* * *

We have heard of no opposition to the re-election of President E. B. Thompson, which he deserves in order to carry out his plans for an improved association and to secure the adoption of the measure he has proposed.

* * *

Be happy—real happiness is found by passing a little happiness 'round.

* *

Mr. Charles D. Cleveland has proven a good mixer by attending the leading shows and meeting thousands of people anxious to know him. Look out for the

NORWICH AUTOMATIC EXERCISERS AND FEEDERS

Are guaranteed rat, rain and sparrow-proof. They will reduce your feed bills 25 per cent; your labor to practically nothing; they will improve the condition of your flock and thus increase the egg production. They will pay for themselves in ninety days in feed alone. Send today for free booklet explaining our thirty days' trial offer. They are for sale by live dealers everywhere, or we will ship direct from Toledo, Ohio. Write now to

River Home Poultry Yards, Breeders Exhibition Quality Light Brahmas, 820 Monroe St., Toledo, O.

Write me your wants. I have the quality to please at right price. Mated Pens a Specialty, absolute satisfaction assured. Cir. free.

FAIRFIELD POULTRY FARM H. W. Schnitzer, Prop. FAIRTON, NEW JERSEY

next M. S. Garden New York Show. It will be the greatest ever.

* * *

"Rastus, what's an alibi?"

"Dat's proven dat yoh was at a prayer meetin' whar yoh wasn't in order to show dat yoh wasn't at de crap game whar yoh was."

* * *

Advertising does not jerk—it pulls. The pull, though gentle at first, is steady and increases day by day and year by year until it exerts an irresistible power.

* * *

This has been the season for the old favorite breeds coming back. The Houdans, Langshans, Brahmas, Dark Cornish, Dorkings, Andalusians and others have taken new life in fact, and we hope the breeders will all properly organize and stick and put all possible vim in their work.

Houdans, a first-class, practical variety, strong and hardy, grand layers, quick to mature, and early to lay, with a fine quality of meat, handsome and attractive, the shows this year have been full of them.

* * *

Dark Cornish, the finest quality of meat, good layers, sturdy and strong growers. Noted particularly for their plump carcasses and full, rounded breasts. A grand general purpose breed and a money maker, very attractive in appearance.

* * *

Brahmas, Langshans and Dorkings, all desirable, with practical qualities, extra size, fast growing and dependable layers. Brahmas and Langshans among the winter layers.

* * *

The Baltimore banquet was a homemade joyous affair, where Messrs. Riggs, Brown, Cleveland, Armstrong and others were heard to advantage. Professor Albers furnished music, and the Dutch (?) quartet, consisting of Kreiner, Bowman, Cook and Swanica, rendered several songs with effect.

* * *

The nightingale our ears would win,
The lark sings in the glen;
But there's more music these days in
The cackle of the hen.

* * *

Poultry associations should adopt the plan of having practical displays shown for the education of beginners. Egg records have a particular interest for us all, especially when eggs sell for from 40 cents per dozen upwards year round. Such displays show money in poultry.

* * *

At Baltimore the display of R. J. Walden's pen of Barred Rocks that won the egg-laying contest at Storrs, Conn., for two years by leading all pens

GOLDEN SILVER CAMPINES FAVEROLLES WHITE BUFF

All blood from the best breeders in the world. We have stock for sale (excepting Buff Favorolles). Will sell a few settings of Buff Favorolle eggs at $15 per 15. To introduce our Campines and White Favorolles we shall sell eggs at a very low price. Our matings are small and few, but of highest quality. Eggs, $5 per 15 (no discount). We guarantee 10 chicks to a setting. We are ready now to ship eggs to our Southern customers.

AUG. D. ARNOLD — BOX 777 — DILLSBURG, PENNSYLVANIA

ROSE AND SINGLE COMB REDS

We have won more prizes in the last three years, in the largest shows of the country, than any other exhibitor. This is not hot air but facts and is easily proven. We are in a position to furnish stock for any show, large or small and are offering some bargains for quick sales. If you want to improve your flocks, our blood lines will do it. If you want to win, we can help you. Our beautiful catalog of 64 pages, printed in three colors, contains many articles on raising and caring for poultry. It will be sent for 20 cents in cash or stamps. We are the largest breeders of Rhode Island Reds in the world, and if you are in need of anything, come to headquarters.

American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralize the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.

The American Standard of Perfection

The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, $2; leather binding, $2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

On its shoulders rest this gigantic Billion-Dollar Industry.

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association. We urge you to write immediately for information and application blank. Address

E. B. THOMPSON, President, Amenia, New York
S. T. CAMPBELL, Secretary

American Poultry Association, Mansfield, Ohio

of this variety and for three months leading all varieties, was the center of attraction and a feature of the show.

* * *

Judge W. S. Russell made a good impression both at Boston and Pittsburgh. His work was very well and quickly done, and we hope to see more of him in the East.

* * *

The exhibit of S. C. Black Minorcas at Pittsburgh was the best display of this variety ever cooped, 241 birds competing. In it was credit enough for all.

* * *

Do it now — your efforts now will bring results later; don't neglect care; see to your matings properly; keep busy and the results will be most pleasing.

The United Poultry Farms Co., Inc., is an assured fact, with Mr. U. R. Fishel, president; Mr. Lester Tompkins, vice-president; Mr. P. A. Cook, secretary, and Mr. J. C. Fishel, treasurer.

* * *

The Indianapolis show, held February 2nd to 6th, was a large and beauty show, with the great classes of Barred and White Rocks features of the display. Note report.

* * *

While at this show we could not resist the temptation of going to Hope, Ind., to visit the home and yards of Mr. U. R. Fishel and Mr. J. C. Fishel, and in our next will tell of what we saw at those two famous plants.

* * *

Mr. Art C. Gilbert, the noted English Orpington breeder, will stay in America, having formed a partnership with Mr. William H. Depper, South Lincoln, Mass. The company will be known as the Pine Lodge Farm Co. and will specialize with Blue and Cockoo Orpingtons.

* * *

Mr. John S. Martin spent two days at the Boston show and for 48 hours never left the White Wyandotte row. John has them better than ever this year, for we have seen them.

* * *

Cut clover is the reliable winter green food and should be fed liberally; it is tasty and the hens like it. To further answer J. B. S. we recommend the Niagara brand, put up by W. R. Curtiss & Co., Ransomville, N. Y.

* * *

We will miss Mr. W. R. Graves, the White Rock and Dotte man in the East. His new home and address is Janesville, Wis. With all best wishes for your success, Mr. Graves.

* * *

Now, folks, get busy; raise all the chicks you can well take care of; a most promising season is ahead and the breeder who has the goods will reap the benefits.

* * *

An ounce of boost more than discounts a pound of obituary.

* * *

Nearly all wise men are married. That is how they got their wisdom.

* * *

If any of our readers are breeding Golden Barred Plymouth Rocks I would like to hear from them.

Wysocki's Silver Campines

Winners at Chicago, Jan. 1914, 1st Pen, 2nd Cockerel, 2nd and 5th Pullet. Eggs and day old chicks at reasonable prices. Mating list upon request.

Current News of the Poultry World

by J. F. Shureman

Utah poultrymen are planning an effort to secure an appropriation from the state for the aid of the poultry associations of the state, for the establishment of a state poultry experimental station and for the promotion of the annual state fair poultry exhibits. A petition asking for the appropriation will be presented at the next session of the state legislature.

Among the freaks exhibited at the recent Racine, Wis., poultry show was a bird that was claimed to be a cross between a chicken and a duck. It had a chicken's head and feet, but its body was that of a duck. Another freak was a fowl with four legs, two tails and four wings, but with one head.

The first poultry show ever held is thought to have been in the zoological gardens of London, England, in 1846. The first exhibition of poultry to be held in America was at Boston in the year 1849. This show did not attract much attention. The first American show to attract world-wide attention was held in the American Museum in New York City in 1854, under the management of P. T. Barnum, who afterwards became the world's greatest showman. In 1886 there were only 52 shows advertised to take place in the United States, while today, during the season of 1913-14, more than 700 poultry shows have been held in the United States and Canada, and more than 200 in England.

At the recent Salt Lake City, Utah, poultry show, S. A. Elswood, of Brigham City, exhibited a pen of four White Plymouth Rock females representing four generations—great-grandmother, grandmother, mother and daughter—and each of the four was awarded a ribbon.

Elmer Mather, a farmer living near Burdette, Kans., gives his chickens a daily feed of dried grasshoppers. The 'hoppers were exceptionally plentiful in the vicinity of Burdette last summer and came pretty near ruining Mr. Mather's sugar beet crop. He rigged up a 'hopper trap and caught 119 bushels of the insects. He not only saved the beet crop, but dried the 'hoppers and stored them away for winter food for his chickens.

A winter course in poultry husbandry is being conducted by the Y. M. C. A. of Columbus, Ohio, with Prof. F. S. Jacoby, of the Ohio State University, as instructor. Both men and women are enrolled, including a number of business and professional men.

George A. Simmons, of Penn Yan, N. Y., claims to have increased the egg production of his flock of White Leghorns 25 per cent during the months of December and January by the installation of electric lights in his poultry house. He turns on the lights at 4:30 in the morning, having a switch near his bed where he can reach it, and when he goes to the poultry house at 7 o'clock he says he finds eggs a-plenty. Mr. Simmons argues that the winter egg production is cut down by the shortness of the days.

An effort is being made by the members of the Fremont (Ohio) Poultry

This Is The Brooder The Chicks Like

This is the brooder that makes success in rearing strong, lively chicks a *certainty* instead of "luck." Notice how cosy the chicks are in the view here on the right. They are enjoying the warmth of the hover and at the same time getting plenty of pure fresh air. Decide to rear your chicks this season with

HALL COLONY BROODERS

and save yourself time, labor and considerable operating expense besides rearing to maturity more husky, well-developed fowls with vigorous constitutions.

The Hall Colony Brooder has a hover which is easily raised out of the way by a simple counterbalance weight. A child can raise it with a slight pull. You don't have to get down on hands and knees to clean this brooder or stove.

Construction and Durability

Cast iron stove, will last a lifetime, will not deteriorate because of fire or coal gas. Hover made of best galvanized iron, having cast iron collar riveted. Thoroughly reinforced—solid. Pure woven wool felt curtain, chicks will not pick at it.

Regulator

Metal thermostat, sure and reliable, operates damper, regulating combustion.

Ventilation

Slight seepage of warm air through top permits gradual change of air, no draughts.

Fuel

Anthracite Pea coal, averaging 40 cents per week, two shovelsful will suffice for 12 hours.

Angle of Fire Pot

and hover radiates warmth so chicks will cluster in a circle away from stove. Easy to shake grate through door of hover. Curtain conserves heat, and chicks prefer the dark when under hover.

Now Is The Time To Order Your Brooder

You will want your brooder in a rush, so will thousands of others want their Hall Colony Brooders. Therefore, place your order *at once* for future delivery and you will be sure to receive your equipment in good season.

The practicability and success of the coal-heated large capacity Colony Brooder was first demonstrated by us.

Write for further information and prices.

The Hall Mammoth Incubator Co.

132 Southern Ave., Little Falls, N. Y.

Association to amalgamate all the small poultry associations in the vicinity of Fremont into one large association to give one big show another year.

Illinois poultrymen will ask the next State Legislature for an annual appropriation of $10,000 for the benefit of the poultry shows throughout the state. The bill is already drawn and provides that an amount equal to 80 per cent of the total entrance fees shall be paid by the state to each association making application therefor, this money to be used for premiums and the other expenses of the shows.

"Lady Elgin," a five-year-old White Plymouth Rock hen owned by John Matteson, of Elgin, Ill., is some egg machine, if reports are true. At the recent Rockford poultry show she made a record by laying two eggs the first day of the show, three before the first thirty-six hours had elapsed, and four at the end of the fiftieth hour. Her owner claims that she has laid three eggs a day on thirty occasions and two eggs a day on seventy-five occasions, and that her record for continuous laying is 234 perfect eggs in 178 days! If these reports are true (mark that "if") "Lady Elgin" is sure a wonder.

Saturday, March 7, has been designated as "Missouri Hen Day." On that day the Missouri State Poultry Association will launch a systematic and thorough educational campaign, in cooperation with the State Poultry Experiment Station at Mountain Grove, which will extend into every county in the state. In order to properly carry on this work, as well as to promote the poultry industry locally, the members of the State Poultry Association in each county will meet and organize a County Branch of the State Association.

Montana poultrymen are sure becoming enthused. At the recent state show at Missoula there were so many entries that Judge Holden could not handle the exhibition alone and it was necessary to wire Judge C. A. Greenfield, of Butte, who came on the first train to assist Judge Holden. It is the first time in the history of the state association that two judges have been necessary.

That beginning next season, Michigan should have a circuit of poultry shows in the larger cities is the proposition that has been advanced by I. A. Freeman, of Fenton, president of the Michigan Branch of the American Poultry Association. Mr. Freeman argues that such a movement would tend to assure a better class of shows, do away with the possibility of conflicting dates and lessen the expenses of the various exhibitions. Flint, Lansing, Battle Creek, Port Huron, Kalamazoo and Grand Rapids are among the cities mentioned as possibilities for the circuit.

According to a recent report of the secretary of state, there are about 11,000,000 chickens in Minnesota and they produced last year (1913) a grand total of 700,000,000 eggs. The value of the eggs produced and sold, and the fowls raised and sold in Minnesota during 1913 was more than $15,000,000. If all the eggs produced in the state during the year were fried and placed one on top of the other, they would make a pile 3,600 miles high, and if a man could, by any possibility, eat ten eggs at a meal, it would take him 66,000 years to eat this great mountain of eggs.

Officers of the Indiana Branch of the American Poultry Association were recently elected as follows: President, W. C. Pierce, Indianapolis; first vice-president, S. A. Noftzger, North Manchester; second vice-president, Carl J. Carter, Columbus; secretary-treasurer, C. L. Fishel, Hope; executive board, B. H. Scranton, Rising Sun; A. G. Phillips, Lafayette; A. Goyert, Greensburg.

California poultrymen are up in arms because of the immense quantities of Chinese eggs that are being imported since the removal of the tariff on eggs. Several hundred thousand cases of eggs, aggregating several million dozens, have been received in San Francisco and are being sold at a price which the California poultryman is unable to meet. It is claimed these eggs are produced under conditions the mere mention of which is nauseating, and that they are unfit for food. Resolutions of protest have been sent to the California representatives in Congress, to the Pure Food Bureau of the Department of Agriculture and to the State Department of Public Health.

The protecting wing of the federal government would be extended over every chicken, duck, goose or turkey shipped in interstate commerce under a bill introduced in Congress by Representative Difenderfer, of Pennsylvania. The measure authorizes the Interstate Com-

Stop that back-breaking work; the heart-breaking losses; the profit-killing expense, by installing the Duplex System of Colony Brooding. This wonderful new way of raising chicks and ducklings will positively save you 90 per cent of the labor; 75 per cent of the operating expense; reduce the mortality from 20 to 50 per cent and increase the vigor and size of your matured fowls. No sickly, stunted cockerels or pullets will be found in flocks raised the Duplex way.

Duplex Brooder Stoves

heat and ventilate your brooder house perfectly. No need to mutilate your building with holes in the ceiling and side walls for ventilation. The Duplex will give you better results without. Don't try to heat all outside by having a hole in your roof. A Duplex will save you all that heat. The Duplex is the latest improved stove on the market, is made of the best material by skilled mechanics, yet sells for less than the others. Why pay more? It is the only stove on the market which incorporates a ventilating feature. This feature alone will save you from ten to twenty per cent of your fuel bill. Our free book tells all about these splendid labor, money and chick saving brooder stoves. Write for it.

Free Book Tells How To Save Your Hatch — Get It!

They Are Beginning to Come. We Have Sold Hundreds of These Stoves. Here is the First Report From a Customer:

Duplex Colony Brooder Co.,
Rockford, Ill.

Gentlemen:

I received the brooder stove promptly and am well pleased with it. You might be interested to know that I used three stoves of another make last season, which did not prove entirely satisfactory, but they convinced me that colony brooding was the only way to raise chicks.

The improvements your stove incorporates interested me so I ordered one of them, and I am satisfied that the Duplex will not only prove more reliable but will save me much on the cost of fuel.

Your system of ventilation is perfect, as it keeps the temperature on the floor of the room right without a draught, to say nothing about doing away with the almost impossible task of putting in a ceiling ventilator which will keep out the snow and rain.

Your regulator is certainly a marvel of simplicity and accuracy, and does not leak as the others did. I expect soon to install several more of your stoves, for I am convinced that you have hit on the proper thing in a Brooder Stove. Yours very truly,

(Signed) Polo Leghorn Yards,
Polo, Ills., Feb. 5, 1914. C. E. Trump, Prop.

That should go a long way toward convincing you. Mr. Trump is a busy man, but he will verify the above statement if you will write him inclosing a 2c stamp.

The time is getting short. Write for our booklet. We will gladly send you a copy free. Stoves will be shipped on the day your order is received, no delay. We pay the freight.

Every Chick Saved Is a Dollar in Your Pocket

"Colony Brooding" is the name of a booklet which fully explains the method of feeding and caring for chicks in colonies. We will send it to you for 50c and give you a coupon worth fifty cents on your first stove purchase. The book sent free with each stove.

Our free catalogue tells all about Duplex Brooder Stoves and the many advantages of Colony Brooding. Send for your copy. It's free for the asking. A postal will bring it by return mail.

Brooder House Plans For 10c in stamps we will send you plans for a Duplex Brooder House. These will enable you to build a new house or remodel your present house without the loss of time. Remember our catalogue is free for the asking.

Duplex Colony Brooder Co., Box 493, Rockford, Ill.

merce Commission to see that food and drink are supplied to all poultry in shipment within 24 hours of the time they are crated. At 24-hour intervals inspection must be made and all dead and sick birds removed.

A report from Texas says that blue bugs are killing large numbers of chickens in that state. A state investigation is being made.

BLUE ORPINGTONS.

PERHAPS nothing in poultry history quite equalled the enthusiasm that followed the introduction of the Orpington fowl to both England and America. In this breed those who had so long admired the beautiful and massive Cochin and yet deprecated its heavily feathered shanks and toes and its sluggish disposition, found their ideal. They also soon realized that in the Orpington they had a most practical breed that would produce eggs and plump, quick growing broilers and roasters. Rapidly following the introduction of the Blacks came other colors, the Whites, Buffs, and the mottled Jubilees.

Latest, and by far the most unique and beautiful, we have the Blue Orpington, just beginning to be bred in sufficient numbers to be placed upon the market. Standing in the background at the late Ohio State Show at Columbus, the writer was impressed by the enthusiastic crowds that fairly "surged" about the coops containing this latest addition to the Orpington family.

The expressions, "beautiful," "gorgeous," "unique," and exclamations of approval were heard with scarcely a note of depreciation.

One enthusiastic countryman remarked upon the long known value of "the old blue hen's chickens," and stated that he always knew her chickens would have their day, as they were always the best chickens that ever wore feathers.

Surely when "the old blue hen's chickens" appear with the massive form and distinguished style of the thoroughbred Orpington, then we have something worthy of enthusiasm.

My experience with the breed has not covered a great time, and in fact, no breeder in America has had long experience with Blues. Yet while I have long been a breeder of pure bred fowls and have had experience with many breeds, I can truthfully say that no breed has so captured me as this latest importation. There are drawbacks. One cannot expect them to breed absolutely true at this stage. There will be a percentage of black or white culls. Yet I culled no larger percentage of chicks last season than I was accustomed to cull when breeding Silver Wyandottes, in which I formerly specialized.

The fertility of the Blue Orpington eggs I have found to be remarkable and the Blue chicks are the strongest and most enterprising youngsters I have yet handled. It is said that a race that has emigrated and been transplanted to a foreign soil is always prolific. That may have something to do with the laying ability of the Blues. At any rate they have that ability. I have fattened some of the culls and no finer poultry meat can be found.

Then the Blue Orpington is a fancier's fowl.

Here we have something interesting to breed for, something that calls for all the skill and enthusiasm that goes with the genuine fancier. So, "taking it all 'round," the writer is well satisfied that the Blue Orpington must forge to the front just as rapidly as its numbers can be increased. Just now that is where it is lacking, in numbers to fill the great and increasing demand.

ADOLPH LEHNE.

125 Egg Incubator for $6.98

OUR POOR MAN'S FRIEND—GUARANTEED FOR 5 YEARS

and will hatch any egg that any other incubator will hatch. It has **triple wall**, the outside is covered with metal, has the same fixtures that any high-grade incubator has. It is a plain hatcher with no complications. A child can run it. No possible way for it to catch fire from its own lamp. We want you to get our book that tells you all about our incubators and brooders. This incubator can't be equaled for double the price. Think of it—**only $6.98.**

30 to 50 CHICK BROODER, $2.50

The Brooder illustrated, at right, will care for from 30 to 50 chicks. It is all metal and comes to you **all complete for $2.50. Hot Water Circulation** which is positive. Can be put in any ordinary dry goods box in 10 minutes. A warm flannel that is warmed by the water tank above drops on the chick's backs and hovers them like a mother hen.

Send a postal before you forget it and get our big book describing 53 different articles we make for you. Now is the time to get ready for Spring Hatching. **GET YOUR ORDERS IN EARLY.**

WENDELL INCUBATOR CO., 51 Main Street, HOLLY, MICH.

John S. Martin, Port Dover, Ont., Can., has won an enviable reputation as a breeder of some of the choicest White Wyandottes in existence today. His strain possesses an individuality truly Wyandotte in conformation. They are neither too coarse nor too fine in the various sections, but possess the refined qualities which have set the fashion in recent years. The cockerel in the above picture is a good example of a high class specimen, despite the fact that the picture was taken during the fall season when most specimens lack full maturity.

Home and the Table
Good Things for Everybody

Helen J. Woods Editor

PARENTS SHOULD AID TEACHERS.

WE hear a good many parents complaining of the present day school system, not in any one locality, but from all sections of the country. And it cannot be denied that there is just cause for complaint. The process of training a child into a thoughtful, useful citizen admits of many mistakes, since the ability, knowledge and fitness for such instruction is not a universal accomplishment. Very few, indeed, possess it. But once we get a little clearer idea of what fitting out a child for life really means there will be more and better fitted applicants for such work.

The parent almost invariably lays the blame for a child's failure on the schools, and surely a good part of it belongs there. It is the natural thing to shield one's self even when it comes to such a matter as the responsibility for the welfare of one's children. The fact remains, however, that first, last and all the time, comes the parent's responsibility. He not alone has to do with the child's heredity but he can, to a great extent, control the environment.

The little child, with his pronounced credulity and adaptability believes almost anything he is told and imitates that which is going on around him. Herein lies the foundation for his successful training. But at this age, the parents are either too busy or otherwise interested to give much thought to the matter. In fact, it is rare to find a parent who is interested in the things that interest his child or to know what line of thought his child is working on. But there is no surer way of helping a child to make his future worth while, than that of influencing his thoughts to work on realizable aims and ambitions.

Not more than a decade or two ago, nearly every one was possessed of the idea that a college education was the thing needful to insure success in life. Few took the trouble to analyze what the individual got out of a college course, but the fact that he held a diploma from a recognized college or university was popularly supposed to fit him for any walk in life.

Today, applicants for any line of work are not rated as to their Alma Mater, but solely on their fitness. And the problem of fitness is one that will confront the coming generation even more directly than it does the present.

The things which the children of today need to know and understand more than any others are those things which bring out, and help develop, natural inherent capability. To bring this about they must understand the proper care and development of the body, the necessity for self-control, the rights of others, the joys and pleasures to be found in the common, everyday things of life; that success rewards a continued effort in any direction and that a child's best assets are cleanness and health of mind and body, habits of thrift and determination to accomplish, and a belief in himself to give to the world the best there is in him, and get out of life the best there is in it. If you stop to consider how few people there are who are really living their lives with any sort of appreciation of what life offers, and of how vast is the number who spend whole lifetimes complaining of imaginary troubles, blundering along to the end with no aim or

ambition for betterment, you cannot help but realize how important a matter this is—this matter of knowing how to live. The foundation, at least, for such an understanding should come from the parent. We cannot presume to more than open the way, and we do not, in fact, need to go farther, but we owe it to him to point out the value of his natural capabilities, since his greatest happiness and success must come from these.

In the matter of actual advancement in school work, instead of spending so much time worrying about the girl or boy not getting ahead, why not see what can be done to help them? Parents, one or both of them, have educated their children before now, with little or no previous training for that kind of work, and have made a very creditable showing at it. But they considered it a matter worthy of thought. They found it could not be disposed of quickly, or gotten out of the way like the week's mending. It requires thought — almost continual thought—to accomplish any good purpose, and this is certainly among the best there is.

If as is the usual case, the child is in school, it is likely he is being hurried and rushed through one thing and then another in an effort to cover the whole field of knowledge in as short a time as possible, the greater part of it being forced upon him second hand, either through reading a prescribed lesson or by being told, in a matter-of-fact way, about something he has never seen. Naturally such information rarely, if ever, registers. But if he could see it, either naturally or interestingly, through the mind's eye, it would appeal to his sense of investigation and desire for knowledge.

Not long ago there was a boy who became disgusted with the utter dryness and lack of interest to him of the study of history. He failed time after time in this branch. His teacher was about discouraged, holding him back on account of it. Fortunately for the boy about this time his aunt came to visit, and hearing of these facts (with no mention of the history failure) began reading aloud to him. She read book after book relating to the history of his country, or of the men who had made history possible. She supplemented it with poems and stories bearing on the subject, until in a few months he was practically the best informed boy on historical subjects in the entire school. The whole subject had taken on a different meaning. The places and people became real and interesting to him. His teacher marveled, but when she learned the facts in the case, she changed, without delay, her method of instruction in history. In the period devoted to this recitation she read to the class or told them stories relating to the subject, and soon it became the most popular period of the day. She found the children were taking out historical books from the library, so great was their interest. Soon similar methods were adopted in the study of geography and language, with truly remarkable results. In another town, an up-to-date teacher, whose class was studying the geography of Holland and the peculiarities of the people, took her entire class to a moving picture show near by which happened at the time to be showing views of the dykes and other interesting scenes

Newtown Giant Colony Brooder

Coal-Burning, Self-Feeding, Self-Regulating

has been tested and proven by your fellow poultry-raisers to be the brooder you need to raise more chicks with the least expense, much less trouble and no danger of fire. Read their letters.

10 Degrees Below Zero—Practically No Loss

It is three weeks since I received my Newtown Giant Colony Brooder and must say it works just like a clock. It keeps the temperature just right at all times and in all kinds of weather. My house is 14 x 16 and I have about 300 chicks in it. The death loss is almost nothing, only one chicken a week. Friday the 6th, the thermometer was up to around 60 and it has been a very warm January, and the cold wave struck us and the thermometer went to 10 below in 36 hours. The Colony Brooder held the heat all O. K. and I know 20 below would not affect the room in heat for the chickens.
I have used nearly all kinds of brooders and lost chickens by the hundreds by their crowding, but I am done losing chickens now. There is no crowding in your brooder as in others—always fresh air to breathe, and I expect to use nothing but your brooders in the future.
—GEO. W. TIMBY, Atchison, Kans.

Four Stoves use Two Buckets of Coal in Twenty-four Hours

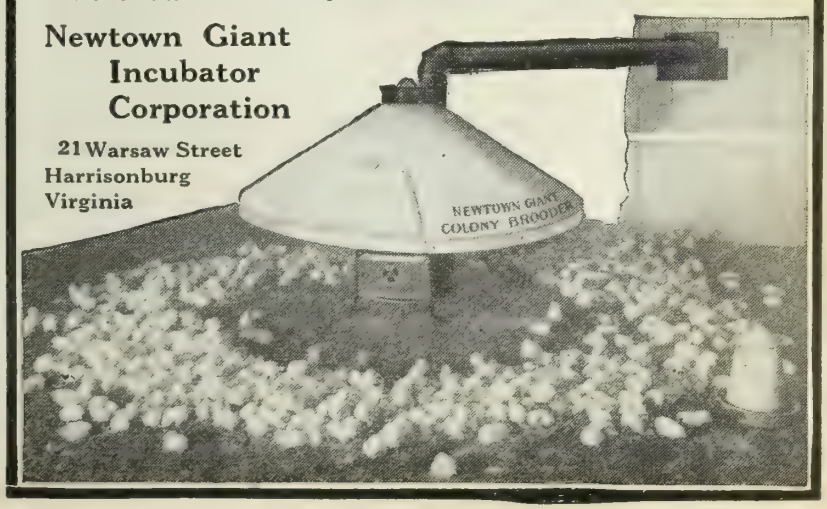
"The four Brooder stoves received from you last season gave good satisfaction, and I recommend them to any one wishing to brood 200 or more chicks. The 4 stoves use 2 buckets of hard coal in 24 hours." —AUG. E. EHLERET, Northfield, Ohio.

Has All the Lamp Heated Brooders Beat

"I thought it was about time for me to write and let you know that I received your Brooder Stove the 15th of December and that the stove is O. K. The Newtown has all of the lamp heated brooders beat in brooding chicks." —A. H. SCHROEDER, Fountain Sq. Sta., Ind.

Has Four. The Best Ever for Brooding

"We have four Brooders and expect to have them running this Spring. It looks like one of the best things that ever came out in the shape of brooding."
—The Everlay Farm, JAMES H. LORD, Methuen, Mass.



This Brooder is not an experiment. It was formerly manufactured by a small Virginia Company, from whom it was purchased and then added to the Newtown family of products.
You get a tried and proven Brooder when you order a Newtown, and with it you will save your chicks and greatly reduce the cost of raising them.

The Newtown Brooder is made in two sizes. One size for up to 500 chicks, and the other for 1000 to 1500 chicks.

If there is no Newtown dealer in your locality, we will prepay the freight. We are prepared to make immediate shipments.

Write now for handsomely illustrated catalog that will give you more information to prove that you should install a **Coal-Burning, Self-Feeding, Self-Regulating Newtown Colony Brooder** for better results and more profit this season.

among the thrifty people of that quaint country.

The mother, who would interest her child along any line where interest drags, can, if she will put a little thought into the matter, find countless ways to bring about a better condition of things. Every child is eager to hear an interesting story. An hour or so spent in telling one that will awaken interest where it is needed will be well spent. The following idea was used successfully with a little fellow who "couldn't see the use of arithmetic." His mother told him the story of a boy, eager to make money, and who, during the summer vacation, applied for the position as office boy with a prominent merchant. This gentleman had begun his business career in the same capacity and took an interest in the boys who applied to him for work. He questioned them closely as to their ability to count backwards as well as forwards, by ones, twos, threes, fours, fives and up to tens. There were very few boys in the large number that applied who could do it, but the prospective employer told them that any boy who was interested and tried could easily learn. There was one boy who displayed a pronounced desire to learn and he was given the opportunity—meaning the position for which he had applied. His interest thus once aroused made the mastering not difficult.

—o—

Steamed Brown Bread.

By F. A. G.

One cup best corn meal, one cup rye meal, one cup graham flour, one cup molasses, one teaspoon salt, one cup sour milk in which one teaspoon soda has been dissolved. Steam four or more hours, then place in the oven for ten or fifteen minutes before serving.

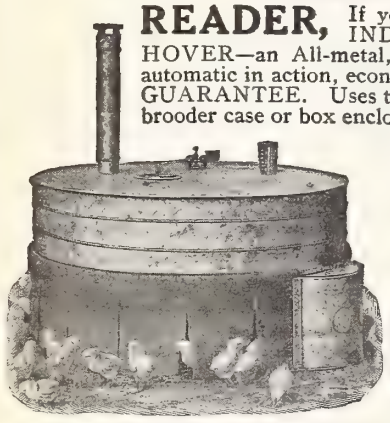
Split Pea Soup.

By F. A. G.

Wash one-half a cup of split peas and soak over night in a pint of cold water. In the morning drain, and add one and one-half quarts of cold water, a small onion, and about half the rind of a strip of bacon. Cook slowly until the peas are soft, then strain, and again place over fire, adding one-half teaspoon salt, a little pepper and powdered sage. Let simmer for an hour and serve steaming hot.

Little Spice Cake.

Cream one-half cup of butter and add one cup of sugar and four well beaten eggs, two teaspoons of cocoa, one-half teaspoon each ground cinnamon and cloves, two tablespoons of black coffee, two ounces of cornstarch, one cup of flour and a teaspoon baking powder. Bake in patty pans in a quick oven and frost with a chocolate fudge, or plain boiled frosting.



Broiled Scrod.

By F. A. G.

A scrod is simply a young cod fish

FOR INDOOR BROODING

READER, If you are looking for a low-cost, convenient and practical way to brood little chicks INDOORS, you will not make a mistake if you buy and use the CYPHERS PORTABLE HOVER—an All-metal, Self-regulating, Self-ventilating, COMPLETE BROODING DEVICE that is automatic in action, economical to operate and that with proper care will last many years. ALL THIS WE GUARANTEE. Uses the floor of the room for the floor of the brooding space and therefore does not need a brooder case or box enclosure. Chicks are on level of room floor all the time and do not have steps or inclines to run up and down. Can be operated in ANY ROOM or place indoors where it is safe to raise chicks or ducklings. Please read the recent sample reports herewith and send without delay for our FREE 1914 "When, Where and How" blanket circular, as described below.

Cyphers Portable Hover

Price, Complete, Safely Boxed, $8.50 free on cars at all our Places of Business, except Oakland and London. Oakland F. O. B. price, $9.50. Entirely Safe to order a sample from this advertisement. Weighs 40 lbs., by express.

REPORTS FROM CUSTOMERS

Hutchinson, Kans., July 13, 1913.
Cyphers Incubator Co., Buffalo, N. Y.—

We believe that no other brooding device comes as near reaching the "acme of perfection" as does your Portable Hover. We know **whereof we speak**—because we have used others.

We wish to say to all poultry growers that they need not fear to use Cyphers Portable Hovers **at any time of the year.** At all seasons we have found them reliable. The temperature is easily maintained, even in very changeable weather. Often when our section was visited by blizzardy conditions we would worry about our little chicks, **but in every case** found them "snug and warm" and unharmed.

Experience has convinced us of the superiority of the Cyphers Portable Hover and in future we shall use them exclusively. They are large and roomy, are **automatic in ventilation** and produce strong, healthy chicks.

O. H. GUY & SON, Per O. H. GUY.
Breeders of Rose Comb Brown Leghorns.

Hillhurst Farm, Poultry Department.
Orchard Park, N. Y., June 27, 1913.
Cyphers Incubator Co., Buffalo, N. Y.—

No doubt you remember our **purchasing one dozen** of your Portable Brooding Hovers last spring. The brooding season now being over, you will be interested to know that they **have given entire satisfaction,** in fact we found them to be the best and **most practical Hover** we ever used and we **have used a number of different makes.** The Portable Hover is **convenient, easy to care for,** economical in operation and supplies an abundance of heat.

We put about 75 chicks under each Hover. We have put more than this under a Hover with good results, but think 75 is better. The Cyphers Portable Hover has the same **easy** and **reliable regulator** that has always distinguished the Cyphers Adaptable Hover, and for anyone needing a **self-ventilating,** practically automatic Portable Hover we know of nothing that equals the Cyphers.

SHAWNEE POULTRY FARM, Josesph H. Fischer, Mgr. **Box M, Shawneetown, Mo.**

and should weigh about four or five pounds. To broil, rub the broiler thoroughly with fat salt pork and broil the inside of the fish first. It will take twenty to twenty-five minutes to broil an ordinary sized scrod over a good bed of coals. When well done it should be rich, flaky and very delicious. Sprinkle with pepper and salt, pour a little melted butter over the fish and serve immediately.

Light Fruit Cake.

Cream one pound of butter and add one pound of sugar and the beaten yolks of ten eggs. Put one pound each preserved citron and orange or lemon peel through the meat chopper. Chop, or break in small pieces, one pound blanched almonds and dredge, both the fruit and nuts, well with flour, adding same to the cake mixture together with one-half teaspoon ground mace and grated nutmeg, one tablespoon of brandy and flour sufficient to make a stiff batter. Sift in two teaspoons baking powder and lastly the beaten whites of eggs. Bake in a medium oven.

Graham Nut Bread.

By C. W.

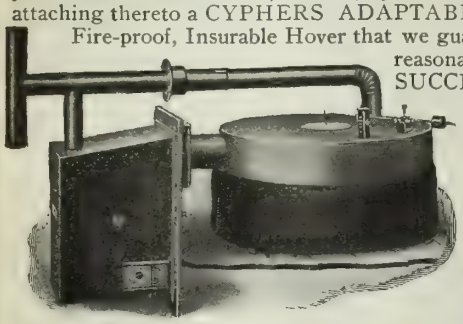
Sift sufficient graham flour to make three cups after sifting. To this add one and one-half cups white flour, one teaspoon salt and three rounding teaspoons baking powder. Sift all together and add one-half cup sugar and two cups of sweet milk. Add also one cup of chopped and floured nut meats. Mold into loaves and bake about an hour in a medium oven.

Shrimp Wiggle.

By C. W.

Melt three tablespoons of butter and add two tablespoons of flour. When smooth and bubbling add one and one-half cups of rich milk or thin cream. Cook until it thickens, stirring constantly meanwhile. Use two cans of shrimp and one can of peas (do not use the liquid), and add them to the cream sauce. Add salt and pepper to taste and serve immediately on buttered toast.

Oatmeal Flour Bread.



Pour two cups of boiling water over a cup of rolled oats and add one-half cup molasses, one teaspoon salt and a tablespoon of lard. When cool, add one-half cup of warm water in which one-half yeast cake has been dissolved. Add sufficient sifted flour to form a stiff dough. Let rise over night. This amount makes one dozen rolls and one loaf of bread. After placing in pans allow to rise again and bake as usual with bread.

———o———

Charred corn is excellent to feed to hens to increase their laying capacity. Char the corn on the cob thoroughly, taking care not to reduce any part of it to ashes.

FOR OUTDOOR BROODING

JUST AS SOON As the ground is dry each spring it PAYS BEST to get the little chicks out upon the fresh earth, or into grass runs—and this calls for colony coops EQUIPPED with safe and trustworthy brooding hovers, or for OUTDOOR BROODERS, either factory-built or home-made. You can easily make your own outdoor brooder, Reader, by securing at some nearby store a piano box, an organ case or a large goods box and attaching thereto a CYPHERS ADAPTABLE BROODING HOVER—a Self-regulating, Self-ventilating, All-metal, Fire-proof, Insurable Hover that we guarantee to be safe from fire, to be practical in use and to last a lifetime with reasonable care. There are TENS OF THOUSANDS of these Standard Hovers in SUCCESSFUL USE in all parts of the civilized world. Please send TODAY for our latest 1914 FREE blanket circular (four pages, 11 by 18 inches in size) entitled, "When, Where and How To Use Cyphers Adaptable Brooding Hovers to Best Advantage"—mailed free, postage paid, to any address on request.

Cyphers Adaptable Hover

Fire-proof, Wind-proof, Insurable, Self-regulating and Automatic in Ventilation. Best Device in World's Markets for Use in Home-made Brooder Cases, Colony Coops, Roosting Coops and Portable Houses. Price, Complete, Safely Boxed for Shipment, $8.50 free on board cars at all our Places of Business, except Oakland and London. Oakland F. O. B. Price, $9.50. Entirely safe to order sample from this advertisement. Send order to place of business nearest you, thus saving time and most of freight or express charges.

REPORTS FROM CUSTOMERS

Wayne, Neb., June 28, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

After using your Automatic Adaptable Hover, and thoroughly testing it, I find they are **just as represented** in your catalogue. Have installed them in goods boxes and home-made brooder cases—these cases being similar to your Style B Outdoor Colony Brooder. I place **fifty chicks** under each hover and they are left with the hover **until six weeks old.** I strongly advise the use of these Adaptable Hovers to fellow poultrymen. On account of their superior construction **they will last for years.** In my opinion this is the best device on the market for brooding chicks successfully outdoors.

LEROY OWEN.

Tappan, N. Y., June 25, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

Early this past spring we purchased two of your Self-regulating Adaptable Hovers and think them **as near perfect as can be made.** We expect to get **at least three more** for next spring. Our losses of chicks entrusted to these hovers are small indeed, and the chicks grow fine. Our chicks under the Adaptable Hovers were **never crowded, overheated or chilled in the slightest degree.** We had no trouble in **keeping the heat at the degree wanted,** as the automatic regulating device took care of it in fine style. I fed my chicks by the Cyphers Company "deep-litter method," and they certainly did fine this year.

A PLEA FOR WELL-FED EGGS.

"Good Eggs for a Good Price, and a Good Price for Good Eggs."

Editor American Poultry Journal:

There is no doubt that some of the food we put into our stomachs will turn to sugar, but nevertheless we are a little careful what goes into the stomach. I notice that people do not want every old thing put into their stomachs, even if it does turn to sugar. And I do not believe they care to eat all kinds of eggs, even fresh eggs, just because a hen is capable of turning almost any old food into eggs. A farmer once told me that he was very fond of eggs after his hens got out on a grass range in the spring. He said he liked the flavor better at that time, but he did not seem to realize what was the matter before grass time came around. However, no wonder he did not like the flavor at other times, for who would from hens that were barn scavengers?

There are probably thousands of people who have, at one time or another, felt the same way about eggs as did this farmer. We frequently like or dislike certain things without knowing just why. But in the case of fresh eggs we can rest assured that if the flavor changes the food has likewise changed. Everything that a hen eats does not find its way into an egg, but some part of it does. Neither does all a cow eats find its way into the milk, but I notice that the milk farmer has to be very careful what his cows are fed. Even the health officers and inspectors have something to say in regard to a dairy cow's food and care. They have found it necessary in order to get first quality milk. There is no reason why poultry should not have the same inspection and care, and in order to get real quality eggs they will have to.

For myself, I want an egg from a grain and vegetable fed hen—not from a hen that acts as a scavenger of a barnyard. It is well known that coal tar products quickly affect the color of an egg, and that onions or fish will as quickly affect its flavor. So also will an egg made chiefly of barnyard filth taste filthy.

The question of clean food or filth for poultry is worthy of consideration, not alone by the poultryman but by people wherever, who use eggs as food. It is a question of giving the "clean food" poultryman his just dues. Really it is a question of getting what one pays for. A filth-fed egg does not rightfully belong in the same class with a grain and vegetable fed egg, but it sometimes gets there, not alone putting a bad taste in the consumer's mouth thereby, but actually reducing the price of good eggs.

Farmers everywhere will tell you that it pays to keep hens on the farm, and every last one of them will add "because they eat up the waste." Of course, very few people think what that means, in fact we don't like to think of it, but we have to, when we get a filth-fed egg, as sometimes happens away from home. The part that hurts the poultryman is that the price of well-fed eggs is largely controlled by the filth-fed farm eggs. It should not be difficult to appreciate the difference between a good article and a poor one and to know why one costs more to produce than the other, but there ap-

FIRST PRIZE PEN S.C. WHITE ORPINGTONS BOSTON, 1914
Bred And Owned By M.F. DELANO Prop. OWEN FARMS, VINEYARD HAVEN, MASS.

White Orpingtons have been improved more in quality during the past few years than any breed we know of at the present time. Both New York and Boston shows had wonderful classes considering the quality and the specimens individually were of high merit. M. F. Delano, proprietor of Owen Farms, Vineyard Haven, Mass., exhibited a very strong team at Boston, winning every first but one. His first prize cock and hen were birds of attractive Orpington type, being large and massive, deep and well rounded in body with beautiful white plumage. The first prize pen shown above was about the best pen we have seen Mr. Delano exhibit and he has shown them many times at the Garden and Mechanics Bldg., where they captured the blue ribbon. The hen shown in foreground of above group was winner of first in single class in Pittsburgh the week following the Boston Show.

S. C. WHITE LEGHORNS

Winners: 1st Cockerel, 1st and 2nd Pullet and 1st Pen at the great State National S. C. White Leghorn Club Meet held at Elgin, Ill., January, 1914. 300 of the noble variety in competition. The hottest class ever held in the state. Send for descriptive catalogue to

W. L. FERN **682 Slade Ave.** **ELGIN, ILL.**

LUCIA STRAIN S. C. WHITE LEGHORNS

Winners at Buffalo's Great Show, November, 1913. Bred in line for superior quality and admired by all who have seen them. My Third Cockerel at Buffalo, although immature, was the sensation of the class. Judges Cleveland and Schwab pronounced him worthy competitor for any show.

Stock for Sale—Eggs for hatching from choicest matings. Write me your wants please.

Evergold Buff Wyandottes

WERE AWARDED THE

NATIONAL CHAMPIONSHIP CUP, '13

at the national meet of the American Buff Wyandotte Club at Rochester, N. Y. At this, the biggest Buff Wyandotte show of this year, Evergolds won twice as many firsts as nearest competitor, while at

Madison Square Garden New York City, 1913

Evergolds won three times as many firsts as any other competitor. These two great wins, together with their winning

Ohio State Championship at Ohio State Meet, 1913

puts Evergolds in a class by themselves as far as Buff Wyandottes go. And best of all, Evergolds are a heavy egg producing strain—the production of *winter eggs* being their strong characteristic.

Mating List Free. Our elegant Catalog giving our methods of feeding and breeding Buff Dottes, 20c.

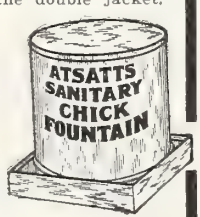
ATSATT Is The MAN Who PUTS PROFIT into Poultry Raising

IF YOU WANT IT, READ THIS NOW



The practical poultry owner learns by experience. After he has cooked hundreds of chicks in the shell, and got tired of low hatches because of faulty, smoky, bound-to-run-up lamps, he pitches them all out and uses nothing but the

"ZERO" SAFETY INCUBATOR AND BROODER LAMP

made on a special Atsatt design. **It's Safe, Clean and Reliable—Safe** because the oil cannot get heated; **Clean** because it never smokes; **Reliable** because it cannot run up and the temperature must remain uniform. Notice the double jacket. All metal. Fits any incubator or brooder. At dealers, $1, or mailed anywhere on receipt of 15c extra.

ATSATT SANITARY SAFE FOUNTAIN FOR BROODERS

can't wet or drown chicks, is easily cleansed and filled, holds a quart and fits any brooder. Heavy galvanized iron. **Try it and you'll never use any other.** 25c at stores, or mailed for 8c extra.

ATSATT'S CHICK FEEDER

is the only chick feeder that absolutely **stops waste.** Lots of room for chicks to get their food, but they can't get into it, stand on top of it, or scratch food out. The top removes instantly for filling and cleansing and springs back into place. Best galvanized iron, so can be used **for wet or dry feed or water.** 10x4 inches—just right size for brooder. 25c at dealers, mailed on receipt of 8c extra.

METAL GOODS EVERY RAISER NEEDS

We make a full line of metal fountains, feeders and lamps, and every one of them has merits over all similar supplies made by anyone else. Those who try Atsatt's are never satisfied with anything else. They save their cost many times over in a season.

Write us Today for FREE BOOK With Illustrations and Prices

Some breeders make more money than others, because they've had the foresight to see that it pays to have **Food-Saving, Time-Saving, Money-Saving** equipment, such as Atsatt makes.

ATSATT BROS., 27 Pearl St., Mattapoisett, Mass.

One lamp, fountain and feeder mailed to one address, at one time, for $1.70, so that you can see how fine they are.

pear to be a good many people yet unconvinced.

Poultry that have been grain and vegetable fed not only produce an entirely different brand of eggs from filth-fed poultry, but the difference in the flavor of the flesh is quickly noticeable. It is up to the producer to demand a difference in price accordingly. Shoddy goods in a clothing store are sold at shoddy prices, but all-wool is sold at its true value every time. Let the poultry keeper make it known among his customers that he feeds for first-class eggs only, and that consequently his goods are worth what he asks for them.

I believe it is up to all of us to help the poultryman in establishing some sort of regulation of egg values. I am strong for helping the man who is in this business for a living. But I am dead against every Tom, Dick and Harry, whose combined accumulation of dirt manufactured eggs amounts to hundreds of thousands of dollars annually, and whose great number only help to keep good eggs below cost of production the greater part of the time. If such producers made money out of the filth-fed egg proposition, I would have nothing to say, because then a poor man could have poor eggs at a poor man's price (yet I do not quite like the filth element in food even for the poor man!), but they practically make nothing out of their slip-shod method of poultry keeping. They are like a good many of the rest of us, helping to keep chickens, not the chickens helping to keep them. They not only hurt the other fellow but make nothing for themselves. The world has a good many such people, and there might be some hope of their finding it out if some of them would start keeping account of what they pay out and what they take in. Ignorance is bliss and they are happy in guessing they are ahead of the game.

A farmer told me a short time ago that he made about seventy-five dollars profit from his hundred hens in ten months. Just previously he had remarked that he could not afford to repair an upstairs window in his dwelling because he was building an addition to his poultry house at a cost of fifteen or twenty dollars. This man is not in debt, has no children and gets good wages. I am wondering what became of all that "hen money," but I think "Mr. Feed and Up-Keep" has it. I would like to see more farmers and poultry keepers working to find out how much their poultry and eggs really cost them, and what the owner and man of all work is getting out of the proposition. When this happens, all the slip-shod class will "cut out" poultry by cutting off their heads and marketing them. And that is something that will surely come to pass just as soon as the consumer gets to know that every shell-covered thing is not an egg. When that day comes, the farmer will not try to compete with the poultryman whose sole business is poultry and egg production. Not, at least, unless he goes about it in a businesslike way by giving his birds clean range and food.

My slogan: Good eggs for a good price, and a good price for good eggs.

Louis Ringuette.

Chas. L. Stiles, Columbus, Ohio

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

A UNIQUE poultry device has been invented by Patrick P. Andrews, of Norfolk, Va. It is a chicken-catcher. It is intended to save the poultryman from the annoyance of having to indulge in a speed contest with the particular chicken or fowl in the flock he has picked out and wishes to catch. Usually that particular chicken determines it does not want to be caught and dodges out of the way just as it is being reached out for. This is very irritating. The inventor even suggests that his device might obviate

Fig. 1.

Chicken Catcher, patented Jan. 13, 1914, by Patrick P. Andrews, Norfolk, Va. No. 1,084,524.

"the necessity of shooting." Anyhow, it is a handy device and can be used for hanging up chickens that are to be dressed as well as for catching live ones. It consists of a handle, which may be of wood, on which is mounted a slidable rod having a hooked end, as shown in the illustration, for engaging over the leg of the wary bird. A spring-held latch is attached to the outer end of the rod and adapted to normally close the hook terminal, the latch being forwardly curved, so as to easily slip over the leg of the fowl. A resilient clip is fixed to the handle between its ends and engageable with one of the convolutions of the end of the rod, to hold it in adjusted position. Patent 1,084,524.

A Green Food Feeder for Poultry is the invention of William D. Moody, of Freeport, Me. It consists of a bag made of netting, and having a spreader disk

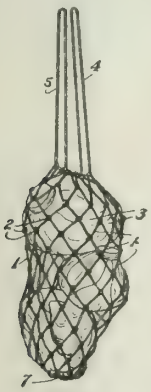

FIG. 1

Green Food Feeder, patented Jan. 13, 1914, by William D. Moody, Freeport, Maine. Rights acquired by H. F. Pierce, New York City. No. 1,084,584.

at the bottom, with a hole at the center to which the marginal meshes of the bag are fastened. Strings serve to support the bag in a hanging position, in which position it cannot be roosted upon, but the cabbages or whatever else it contains are within easy reach of the poultry. The patent rights have been acquired by Hubert F. Pierce, of New York City. Patent 1,084,584.

A new and convenient Poultry Marker devised by Charles O. Deist, of Ottawa, Ill., for attachment to the leg of the marked bird so as not to interfere with the circulation of the blood or

Fig. 1.

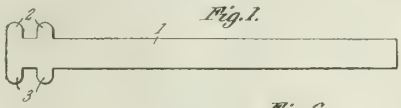

Fig. 2.

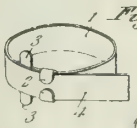

Fig. 3.

Fig. 4.

Poultry Marker or leg band, patented Jan. 13, 1914, by Charles O. Deist, Ottawa, Ills. No. 1,084,407.

injure the chick. This poultry marker is fashioned from a strip of pliable material provided upon its opposite edges and at one end with pairs of oppositely disposed primary and secondary tongues, the tongues being bent to overhang the strip, the free end of the strip being bent across the outer faces of the secondary tongues and being extended beneath the primary tongues and reversely bent to cover the ends of the primary tongues, the pairs of tongues being spaced apart. The strip is imperforate from end to end, the tongues constituting the sole outstanding elements upon the edges of the strip. Patent 1,084,407.

A Vermin-Killing Poultry Perch has

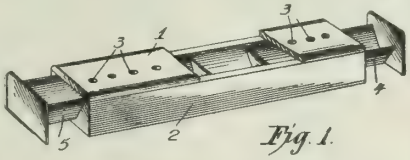

Fig. 1.

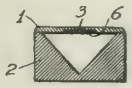

Fig. 2.

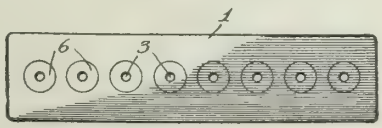

Fig. 3.

Vermin-Killing Perch, patented Dec. 30, 1913, by Morton Cooper, Bainbridge, N. Y. No. 1,082,585.

been invented by Morton Cooper, of Bainbridge, N. Y. The roost is hollow and has tin trays within it to contain a germicide for the extermination of lice, mites and other vermin that infest fowls and growing chickens. The trays are removable and may be taken out and cleansed without taking the perch from its position. The trays are V-shaped in cross section, and mounted in correspondingly shaped grooves in

The Ideal FEEDER AND EXERCISER

Will feed any kind of poultry feed. Adjustable to feed any amount desired. Will pay for itself in six months. Increase your egg yield 25 to 40 per cent.

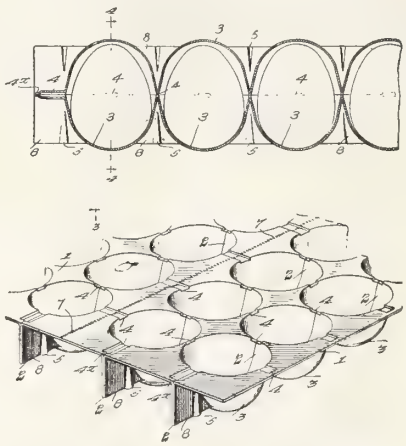
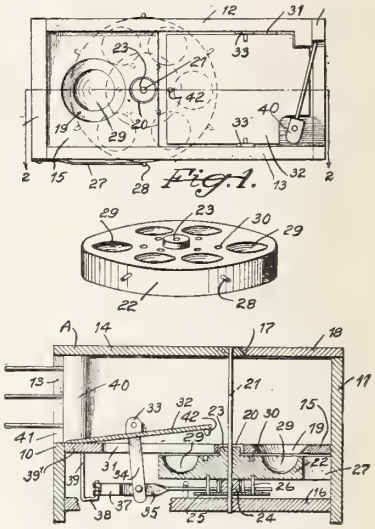
the perch. Perforated metal disk in the upper portion of the perch prevent vermin from returning to the surface of the perch. Patent 1,082,585.



A new Carton for transporting eggs has been devised by James L. Myles, of Haddon Heights, N. J., and William L. Geddes, of Overbrook, Pa., jointly. The carton comprises a case having within it angularly disposed hinged sections forming a rack, or racks, and similar angularly disposed hinged sections forming a rack or racks extending transversely to the rack or racks first named, these hinged sections having cuts by which they are interlocked and held in position. V-shaped channels are thus formed for the eggs, which are effect-

Egg Carton, patented Jan. 6, 1914, by James L. Myles, of Haddon Heights, N. J., and William L. Geddes, of Overbrook, Pa. No. 1,083,694.

ually separated, will not move in their separated compartments, are not subject to pressure against their sides, are cushioned or protected against shock, and are conveniently placed and incased so that they can be shipped. Any usual blow or pressure will be taken up by the case before it reaches and damages the eggs. Patent 1,083,694.



A Receptacle and Carrier for Eggs invented by Risdon Moore Odell, of Hutchinson, Kan., provides an air-tight and light-proof chamber for each egg. It comprises a bottom portion and a cover, the bottom portion consisting of a series of cell portions, each cell portion having foldable embossed halves arranged to register, integral bracing

Egg Carrier, patented Jan. 20, 1914, by Risdon Moore Odell, Hutchinson, Kans. Rights purchased by S. S. Johnson, Plainfield, Ind. No. 1,084,751.

members between adjacent cell portions, and means (which are vertically extending embossed walls) carried by the bracing members for preventing a flow from one cell to the other, in the event of any egg becoming broken. The patent rights have been purchased by S. S. Johnson, of Plainfield, Ind. Patent 1,084,751.

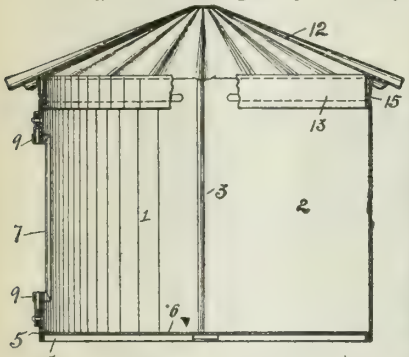
An interesting Automatic Hen's Nest invented by Sabert G. Oglesby, of Green Pond, Ala., makes the hen register her own laying capacity. The mechanical operation of the nest is effected by the entrance and exit of each hen. The opening of the door of the nest operates a rotatable disk and what is about to occur—that is, if the hen doesn't change her mind and go out for something to eat—is registered. Assuming the hen to be satisfied, she sits over a recess in the casing that is positioned in registration with one of the several cavities in the rotatable disk beneath, performs her day's work and retires. As she leaves the nest the forward end of the platform of the nest is depressed and all parts of the device, with the exception of the disk, returned to their initial position. The disk has been rotated so that one of its other cavities is beneath the nest ready for the next hen's egg. But this is not all. "To identify the eggs deposited in the recesses it is customary," says the inventor, "to at-

Automatic Nest for hens, patented Jan 20, 1914, by Sabert G. Oglesby, Green Pond, Ala. No. 1,084,752.

tach different colored crayon to the limbs of the hens, and the particular color crayon transferred to the wall of the disked recess during laying will serve to identify by which hen the egg in the particular recess (in the rotatable disk) was laid." Patent 1,084,752.

First Pen Cockerel, First Pullet and First Hen, Chicago, 1914—Bred, Owned and Exhibited by Eugene C. Smith, 317 Galena Boulevard, Aurora, Illinois. Mr. Smith's catalog will be sent free upon request.

A Knockdown Brooder-Coop of circular form has been invented by William Warnick and Henry L. Leilich, of Delphos, Ohio, and the patent rights in the invention assigned to the Delphos Mfg. Co., Delphos, Ohio. The coop is capable of being easily and quickly set up or knocked down, and, when knocked down, of being packed in compact form for storage or shipping. A plurality of side wall sections are employed, having vertical telescoping interlocking rolls, whose edges extend angularly inwardly



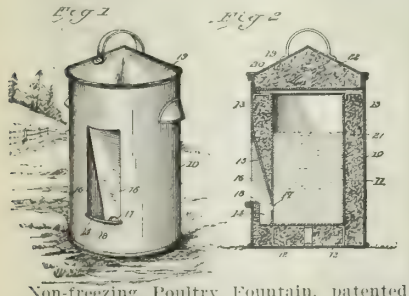


Fig. 4.

K. D. Brooder Coop, patented Jan. 6, 1914, by William Warnick and Harry L. Leilich, Delphos, O. Rights assigned to Delphos Mfg. Co. No. 1,083,572.

into the rolls. These edges are adapted to frictionally engage with each other when the side walls in the vicinity of the rolls partake of a true cylindrical form. A circular bottom and circular cover are also provided. The cover has a circular flange to fit within the side sections. It is preferably of cone form and corrugated radially. Patent 1,083,572.

A winter Poultry Fountain devised by Arthur A. Wester, of Boone, Iowa, has a reservoir surrounded by suitable non-conducting material to keep the water from freezing. The fountain has an opening at its side where the water is supplied to a trough located below the opening of the reservoir. Above it is a sloping side wall. The fountain has a removable cover, which also is packed with non-conducting material. The atmospheric pressure on the small quan-

Non-freezing Poultry Fountain, patented Dec. 30, 1913, by Arthur A. Wester, Boone, Iowa. No. 1,082,921.

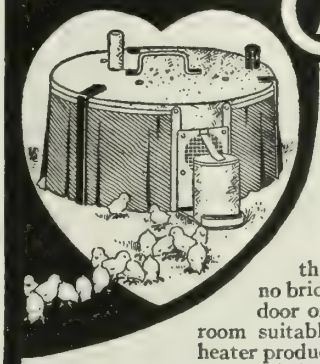
tity of water in the trough will retain the mass of liquid within the main reservoir so long as the liquid in the trough is sufficient to maintain the orifice or opening to the trough closed. Patent 1,082,921.

An Egg-Turning Tray for Incubators has been invented by Henry A. Templeton and Alfred A. Bailey, of Sultan, Wash. The hen's own highly scientific method of hatching includes the turning and moving about each day of the eggs which she is incubating. In fact, she gradually works them from center to circumference of the brooding area

BUFF AND WHITE ORPINGTONS

THE ELMWOOD STRAIN

THE STRAIN OF LEAST RESISTENCE



BUFF ORPINGTONS. Cockerels that are blocky, broad, deep and massive, full of vigor, strong in under-color, strong in head points and type, and a rich, even, lustrous shade of buff, as soft as moonlight. Won more points at the New York State Fair than any other exhibition. Almost a clean sweep at Albany. They always win. It's in their breeding.

WHITE ORPINGTONS. Some very high-class cockerels to spare. I know we've got what you want I know, too, you can pay more elsewhere than I ask, but you can't get better blood lines, or quality. Book your order early for eggs at 50c each. A few baby chicks also. I guarantee to please.

CAN WE HELP YOU?

Raising the young chicks is the hardest part of the Poultry Raising Game. That's just why we are devoting our whole time and energy in helping to raise them and we want to help you raise a larger percentage of your chicks this season than ever before. We manufacture the

Ideal Portable Hover

the perfect chick mother that sets on a level floor with no bridges for chicks to climb; it can be used in an outdoor or indoor brooder colony house, hen house or any room suitable for brooding young chicks. The double drum heater produces 15% more heat than any single drum heater; the automatic lamp was especially designed for a Portable Hover. Oil fount outside of lamp box; oil always cool; this lamp will never smoke. The Ideal is 24 inches in diameter, all metal but double curtain and will brood 100 chicks. Regular price $7.00, but we are anxious to have you try this Hover and we are making a special price of $6.50 each. Send $1.00 and we will ship by express C. O. D. We also sell the QUEEN INCUBATOR in connection with the Ideal Hover. Get our Special Combination Offer.

12 Months' Course in Practical Poultry Raising

Free to our customers. Lessons are mailed out each month. Our one lesson on artificial Incubation and Brooding will give you some pointers never told before that will make chick raising a pleasure instead of the old, old story of, I can hatch them but don't have very good luck raising them. We mean just what we say about wanting to help you. Will you let us? Drop us a card. We will tell you all about the Ideal Hover, Queen Incubator and the 12 Months' Course and if you will mention this paper we will include a Copy of How to Raise 90% of Your Chicks. Yours for more chicks.

SIMPLEX

BROODER STOVE

How many of YOUR chicks LIVE?

With a Simplex Brooder Stove you can actually RAISE 20 per cent to 50 per cent more chicks than by any other method—and save 75 per cent of your operating expense and 90 per cent of your time. Do you know as good a way to PROFIT?

You don't want to experiment—you want to know. Here's the **knowledge** you want. The Canadian Government has done the experimenting. It moves slowly and Surely. It has to know before it plunges, just as you are saying you must know. It tested all methods in every imaginable way and finally tied to the Simplex for all Canadian Experiment Stations, increased the the equipment and is planing to still further increase the number of Simplex Brooders at each Branch Farm.

Dominion of Canada, Dep't of Agriculture
Central Experimental Farm
Ottawa, Canada

Simplex Brooder Stove Co.
Grand Rapids, Michigan

We have put in one or two more Simplex Brooders at several of the branch farms throughout the Dominion. Would like house plans and F. O. B. Grand Rapids prices.

V. C. Eifard,
Dominion Poultry Husbandman.

The Simplex can be used in most any room. It is built by experienced and practical poultrymen who originated it purely to raise their own chicks. They are offering it to others on the word of scores of users who are thankful for it. They have had it built right—not flimsy cheap construction nor expensive fuel upkeep. All the things you'd ask a neighbor who had one are answered in a perfectly frank catalogue and this will be sent by next mail for a request on a postal.

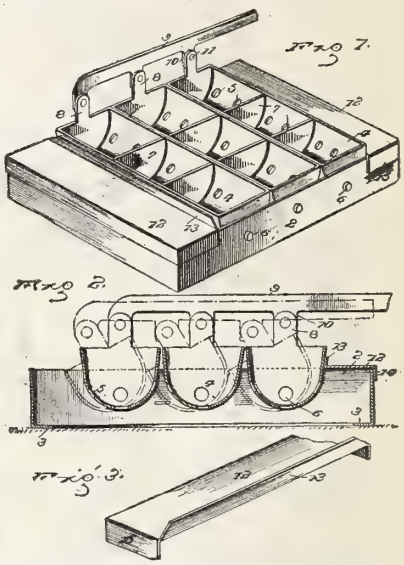
Here's the Proof

The "Simplex" Eliminates White Diarrhoea- Read this letter, it proves that we know what we are talking about when we say the "Simplex" will prevent White Diarrhoea.

Chicago, Ill.,
April 9, 1913.

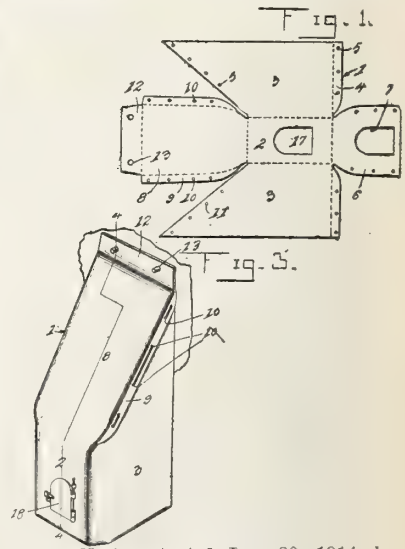


Simplex Brooder Stove Co.,
Grand Rapids, Mich.

Gentlemen:—

Enclosed please find my check for $29.50 in payment for Brooder Stove shipped me on the 7th. This is the second stove I have purchased from you this season, and of course the last one is purchased because the first one is doing the work. The stove works entirely satisfactory, and does all that you claimed it would do. I believe you have solved the bothersome problems in brooding. The stove has eliminated White Diarrhoea from which I sufferred heavy losses, losing 50 per cent of my hatch. The losses with the stove have been very small.

Very truly yours,
Judge J. C. Everett,
Farm at Holland, Mich.

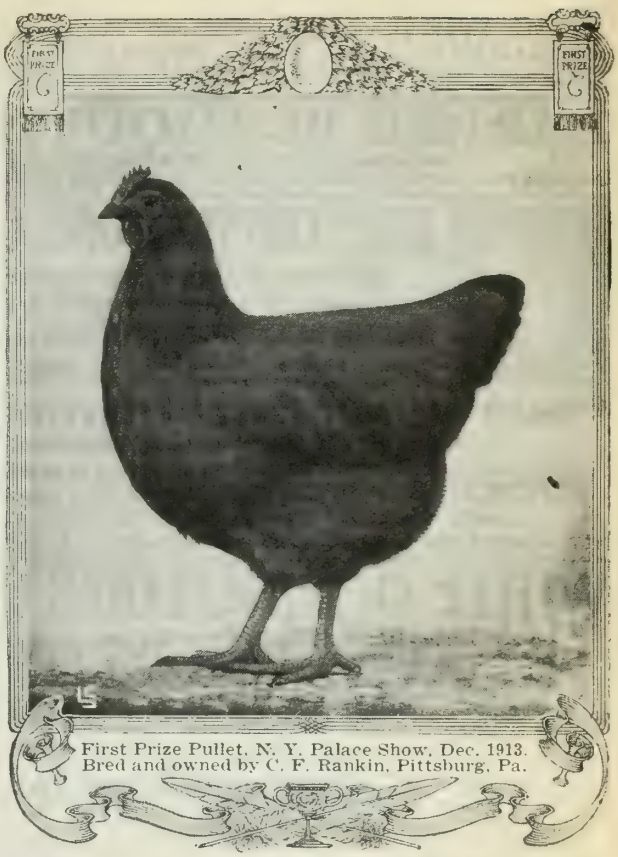


and then back again. Recognizing the need for turning eggs during incubation, in emulation of the methods of the hen, these inventors have provided an open frame with a plurality of egg-supporting trays arranged side by side and mounted for oscillation in the frame, and combined stop members and platforms detachably engaging the frame and having upwardly directed

Egg Turning Tray for incubators, patented Jan. 6, 1914, by Henry A. Templeton and Alfred A. Bailey, Sultan, Wash. No. 1,083,469.

flanges bearing against the outer trays and holding them in vertical position. Patent 1,083,469.

A Covered Hen's Nest invented by Louis F. Reichardt, of Massena, Iowa, is formed of a single sheet of material. It has a steeply inclined top that would insure a toboggan slide to any hen attempting to roost on top of it. The



Hen's Nest, patented Jan. 20, 1914, by Louis F. Reichardt, Massena, Iowa. No. 1,084,963.

accompanying illustration makes further description unnecessary. Patent 1,084,963.

A Hot-Water Heating System for Incubators devised by Loren W. Emler, of Rawlins, Wyo., is designed to effect constant and even circulation of the hot water and provide for perfect drainage of the water pipe. In an incubator

First Prize Pullet, N. Y. Palace Show, Dec. 1913.
Bred and owned by C. F. Rankin, Pittsburg, Pa.

At the Indianapolis Show, February, 1914, Mr. Ralph Woolery of Bloomington, Ind., had a pair of White Orpingtons on exhibition (not for competition) that attracted great attention. We show the two birds here just as the camera took them. The picture speaks for itself. The high quality of the birds is very much in evidence and a tribute to Mr. Woolery's skill in producing them. His new catalog is just off the press and will be sent free.—L. A. Stahmer.

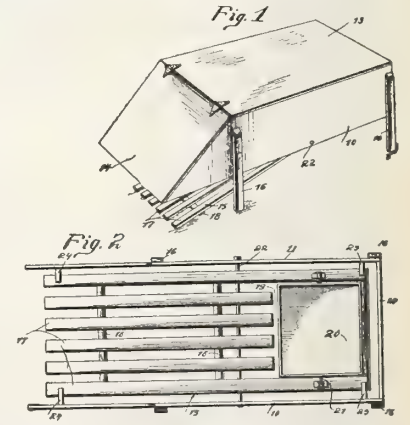
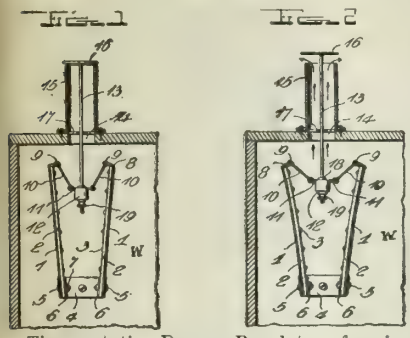
comprising a hatch chamber and a heating chamber above the hatch chamber, this inventor provides a partition between the chambers comprising a frusto-



Hot Water Heating System for incubators, patented Jan. 6, 1914, by Loren W. Emler, Rawlins, Wyo. No. 1,083,674.

conical coil having its apex uppermost and above the central portion of the chamber, a boiler, a flow pipe from the boiler connected with the apex or highest coil, and a return pipe connected with the bottom or lowest coil. For supporting the frusto-conical pipe coil he uses a plurality of upwardly bowed strips. Patent 1,083,674.

A Hen's Nest invented by McDonald Alexander, of Birmingham, Ala., includes a box having an open bottom, legs supporting the box in raised position, and a tilting platform pivoted to as deep as you can go with the spade. With fork and rake work the soil up the box to form a closure for the bottom. The platform has an opening ad-



Hen's Nest, patented Jan. 13, 1914, by McDonald Alexander, Birmingham, Ala. No. 1,083,980.

jacent one end. A nest box is pivotally supported in the opening of the platform and arranged to permit one edge of the box to be swung below the platform to permit access to the box. When occupied there is no opportunity for other hens to crowd into the nest, as the entrance is closed. Patent, 1,083,980.

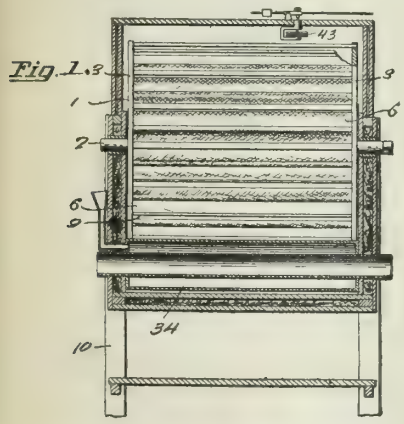
N. P. B. Ellegaard, of Petaluma, Cal.,

has patented a Thermostatic Damper-Regulator for Incubators, having an improved support for the thermostatic plates whereby they are caused to stand nearly upright and to normally diverge slightly toward their upper ends. He

Thermostatic Damper-Regulator for incubators, patented Dec. 23, 1913, by N. P. B. Ellegaard, Petaluma, Cal. No. 1,082,115.

also employs an improved weighted toggle-lever connection between these upper ends so that they are normally drawn inward to a slight extent and when they are spread apart under the action of heat the result of such action will be felt at first more decidedly by the damper and later less decidedly. Patent 1,082,115.

An Incubator recently patented by Cheves Bevill, of Waldron, Ark., has a rotatable egg holder. The eggs are supported within a plurality of channels formed on the periphery of a cylinder mounted within the incubator. In this way the eggs may be moved from one



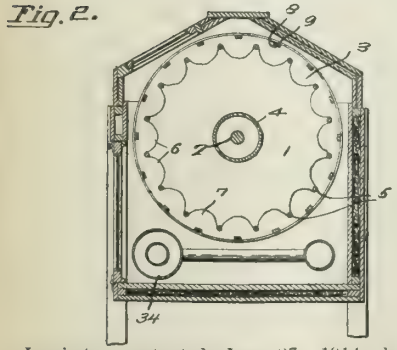


Fig. 2.

Incubator, patented Jan. 27, 1914, by Cheves Bevill, Waldron, Ark. No. 1,085,527.

position to another within the incubator from the outside, without opening a door or subjecting the interior of the incubator to a dangerous change of temperature in order to move the eggs. Patent 1,085,527.

SILVER WYANDOTTES

THE BEAUTY & UTILITY BREED
THE BEST WINTER LAYERS
STOCK FOR SALE AT ALL TIMES
NO EGGS NOR BABY CHICKS

A. E. TARBOX, BOX A, YORKVILLE, ILL.

SILVER CAMPINES

Our Campines won at Aurora, Ill., cockerel, 1st, 2d and 4th; hen, 1st; pullets, 1st and 5th; pen, 1st on nine entries. We have 75 choice cockerels and pullets for sale in single cockerels, pairs, trios or pens. Also a choice lot of Wyandottes, including some of our Baltimore and St. Paul winners. Let us quote you prices.

R. C. Rhode Island Reds

A winning strain. Hundreds for sale.
J. T. ADAIR, Black Orpington Specialist
Millersburg, Bourbon Co., Kentucky

Pacific Coast Department

Conducted by H. H. Collier, Tacoma, Washington.

TO tell the east and middle west about Miller Purvis is like carrying coals to Newcastle. But we have him with us and, of course, must tell our readers about him.

Miller came west some years ago. He landed in Los Angeles and he told them down there that California had the greatest climate of all. If you have ever been west (Pacific Coast) about the first thing the people will ask you is, "How do you like the climate?" Most of the east and middle west boys will, of course, flatter us and say it is fine, even if they have not seen the sun shine since they arrived or gotten a glimpse of our surrounding mountain scenery. To us this climate proposition is a big thing. Our death rate is so low that it is hardly worth printing and we are so well pleased with our country we imagine that everyone else should be.

As I said before, Miller came to Los Angeles and he was just about ready to write home for his blankets when a son of his wrote him not to lose his head but to come to southern Idaho. Miller went and landed in Wendell, about twenty miles from the main line of the Oregon Short Line, a part of the Union Pacific system. He had not been there but a few days before he was telling the Idaho people that it was the finest climate he ever saw. And that is not the worst of it. He told this story so much that he began to believe it himself and he sent home for his blankets and has been there ever since.

Up around Wendell it is a new country. The people who have gone in there made the country blossom like a rose and one can raise anything that his heart desires, from alfalfa hay to chickens. Potatoes seem to be a natural crop and fruit does splendidly, in fact, the apples around that section seem to be a little "redder" than in any other country, unless the Yakima and Wenatchee country of Washington be a little bit ahead in that respect. In coming west Miller had good health and today he is unlike former President Taft, who recently was forced to have thirty-seven pairs of trousers cut down, Miller was forced to have his enlarged. But unlike Taft, Miller never had thirty-seven pairs of trousers in his life.

Since coming west Miller Purvis has broken into the judging game for fair. He says that he does not want to judge but it is noticeable that he takes on a bunch of shows each year and what is better he seems to be able to give satisfaction wherever he has judged a show.

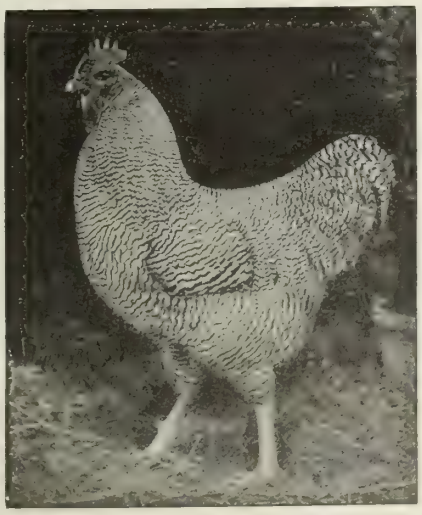
There is something about Miller Purvis that seems to give him a confidence second to no one and his writings on poultry of the northwest are read by everyone and everyone loves to read his "stuff." Another thing about Miller, he is one of the best single hand talkers in the country and when it comes to addressing the members of the Y. M. C. A. on the subject of poultry, he has no peer. Let him get started on the subject and he soon grinds out a bunch of "stuff" that will convince the most skeptical that the poultry business is the only "game."

Miller says that he has never seen a single standard bird that would satisfy him. His old-time friends knew him as a breeder of Brown Leghorns, but these are not the only birds that he breeds. He came down from Wellington the second week in January to the big Walla Walla show where he had

Above All—The Henderson Strain

AMERICA'S FOREMOST

Barred Plym. Rocks for Exhibition and Utility



Madison Square Garden, New York, Chicago and St. Louis Winners

This grand strain is large framed, with wonderful type, has long, deep bodies, broad backs, well spread tails carried low, and that snappy distinct barring to the skin, that wins in the best of competition.

My first prize cockerel and grand champion male at Chicago 1912 in a class of 54 of the best in the world proves that my strain carries the maximum of quality in Barred Rocks today. His type and barring created a sensation among Barred Rock breeders of the world. A number of his wonderful sons will head my 1914 breeding pens.

When you start to make up your breeding pens this year and find that deficiency which you desire to overcome, **remember that I have the strongest lines of breeding Barred Rocks in America**, and can furnish males and females with the quality desired to balance the pen and improve the progeny.

My **Barred Rocks** have won consistently at all the large national shows for the last 20 years in all competition as a result of being line bred and pedigreed. Compare my winnings with those of any other breeder and form your own conclusion as to who has the best producing strain.

First Prize Pullet Bred Cockerel, Coliseum, St. Louis, 1913

For the season of 1914 I will mate 50 breeding pens in both my **Cockerel** and **Pullet lines**, from which I will furnish eggs for hatching at prices quoted in my mating list and catalog which describes each individual specimen that I will have in breeding. These pens will contain my Madison Square Garden, N. Y., Chicago and St. Louis winners and their descendants. The inherent characteristic quality as bred in the **Henderson Strain** both in the Cockerel and Pullet lines, and demonstrated by their public record in the best show rooms in America, enables me to mate for the season of 1914 the strongest breeding pens of **Barred Rocks** in the world.

Write for my new Catalog-Mating-List which minutely describes these pens and **the largest exclusive Barred Rock farm in the world.**

SATISFACTION GUARANTEED

W. W. HENDERSON, BRIDGETON, ST. LOUIS COUNTY, MISSOURI

the honor of winning the first young pen in Buff Rocks under J. H. Drevenstedt. Any time that you desire information about southern Idaho write to Miller Purvis. He has bought a typewriter (that is, a machine) and the way he will hand you the good things about his chosen country would make cloudy weather look like sunshine and "dunghill" fowls look like New York winners. He has picked up a pile of flesh since he came west and one would not be surprised to hear that he had traded trousers with Taft, that is, if he ever gets enough so as to be able to make the exchange.

Someone asks in the American Poultry Association bulletin if we want color disqualifications in the next Standard of Perfection. I for one am in favor of disqualifying where a bird shows off colored feathers, in white birds, all varieties. Brown Leghorns, Partridge Rocks and Wyandottes, all black fowls. Having bred all of the above varieties I have found white or black in plumage a breeding defect. The Standard should protect all breeds by disqualifying for all defects that will breed back.

I am not ready to disqualify buff birds for having off color, for the reason that we have not reached that stage where we can afford to do so. But I would put in a clause in the Standard of Perfection something like this:

"Where a buff fowl shows clear buff in wings and tail and is free from black and white in any section, everything being equal, the solid buff birds should win." (This winter I exhibited a solid buff pullet that had gone a little by being ripe and she was let down and a pullet with a lot of black in her tail won first. My bird would prove the best breeder and had she been in her best plumage would have had that heightened color that was shown in the winning pullet in her neck and back.) "Everything being equal, the bird showing the most life in its plumage should win."

This section may not be worded just to suit the Standard makers but I believe that words to that effect should be used. It is hard to get a solid buff, much harder than it would be to get a bird good in back and breast and at the same time weak in tail and wings. The wings of buff are coming very good. We are having little trouble in getting buffs with solid colored wings and my Buff Rocks this season are remarkably free from white or black in wings. In fact I will not breed a pullet this season with black or white in wings and I will have several that show no black or white in tail.

Another question is asked in the bulletin: "Do we want to leave symmetry out of the Standard." I for one say yes. I believe that symmetry is a good section where score cards are used but there are a lot of judges who have American Poultry Association licenses that will not use the section. I judged a show in Colville, Wash., where I followed another judge. The breeders had his cards at the show and not one of them showed where he had used the symmetry section. In other words, from his card each and every bird was pronounced absolutely perfect in this section. Some of the judges insist that if one cuts a bird in symmetry and other sections that do not conform to type, then he cuts the fowl twice for the same defect. Personally, I would rather not meet this controversy in shows where I meet the other judges' cards that do not use the section.

I shall always favor the score card, simply because I consider it the best method yet devised for awarding prizes on fowls. It makes the judge know his Standard section by section. He knows how much each section is worth and values it accordingly, whether he is judging by score card or comparison.

"SUNLIGHT"
POULTRY FARM S·C·W·LEGHORNS

(D. W. YOUNG STRAIN)

Greatest Known Layers

Day-Old Chicks Hatching Eggs And Breeding Stock

Bred from Range Grown Birds

It's Not How Many You Buy, It's How Many You Raise That Spells Success

Sunlight Poultry Farm's chicks are livable chicks, as well as quality chicks, because they are bred from quality birds that have vitality, stamina and the best laying qualities bred into them. They are the chicks that will develop into robust cockerels and pullets, that will please you. Not a yarded breeder on the farm, but just a large flock of breeders, out on unlimited range, housed in open front houses. Is it any wonder that I get such good fertility in my eggs and such strong, healthy chicks?

A Few Choice Breeding Cockerels Left

that must be sold at once at $2.00 and up. I can make you most attractive prices on pairs, trios or pens. Read what one party says about my stock and plant:

Mr. E. N. Lemon, Lynchburg, O.
Dear Sir:—After returning home from a two weeks' tour of poultry farms in Southwestern Ohio and retracing my steps and looking over my notes, I have quite a few words of praise for your plant, of which you are no doubt justly proud.
I believe with your mammoth Candee Incubator (5400 egg capacity), and considering your plans and methods of handling eggs during incubation, you show that you are absolutely up-to-date and in a position to do a big "Day Old Chick" business.
Your plant looks good to me, being the best looking and the most convenient colony house system I saw anywhere on my trip.
Your stock, too, looked especially good, there being no droopy birds in evidence; this perhaps is due to the extreme cleanliness of your plant from start to finish.
Very truly yours,
Leslie J. Hoyt, Mt. Gilead, Ohio.

I PREPAY EXPRESSAGE

on all orders for day old chicks and eggs. Also guarantee safe delivery. Would suggest that you place your order at the earliest possible date to insure prompt delivery when wanted. If you want the best in S. C. White Leghorns, write to Sunlight Poultry Farm. They are persistent layers, hence money makers, the year around. Best of references. Send for catalogue and prices. "The Most of the Best for the Least."

SUNLIGHT POULTRY FARM E. N. Lemon, Owner LYNCHBURG, OHIO

Take the Leghorn of today. The fad is back and tail and more value is given to these two sections than is awarded to the whole head section that has nearly double the number of points in it. If the Standard makers want to give the tail and back the extraordinary value that some judges award them, then the Standard should be changed. If the head, beak, eye, comb, wattles and ear lobes are the most valuable part of a Leghorn, then the judges should place the value in these sections. There are thirty-four points in head and in tail; there are six points in shape, and four in color. Back five points in shape and four points in color. A total of nineteen points are given to back and tail for both color and shape. Some of the judges seem to ignore this fact and will often place the award on a bird with good back and tail, ignoring the fine head points of another bird to which the Standard of Perfection gives thirty-four or nearly twice the number of points.

In a score card show the values of the sections are so plain that one can not give everything to fads.

PLAN FOR CITY POULTRY FARM.

By S. H. Bennett, Farmer City, Ill.

A POULTRYMAN with a city lot about 40x40 feet, has room enough to establish a comfortable little poultry farm in his back yard. There was a vacant lot of this size south of my house and I have equipped it after the following plan and find it a very profitable investment. The lot was first enclosed in a 58-inch wire fence, and then subdivided by a 48-inch wire netting as the accompanying diagram shows, making before they are again subdivided one lot 10x40 feet, two lots 40x15 feet, running to a point at each corner; and a larger center lot 30 feet wide on the south, and running diagonally to a gate 12 feet south of the north boundary. In the center of 40x10 foot lot is a 10x10 foot house, facing the south but having a door in both front and back. Also on the 12x20 foot lot directly north of the diagonal runs, is a house facing south. There is also a door in north end of this house, a partition in center with door swinging both ways. On the east end of house there is a shed 10x12 feet, used for sitting hens and for storage at other seasons of the year.

Oats is sown in small yard north of 10x10 house, and rye in yard south of this house. Rye is also sown in the two small triangular yards; with wheat, rye and clover in the center one. West of the larger house we have a space 5x12 feet used for growing rape or lettuce.

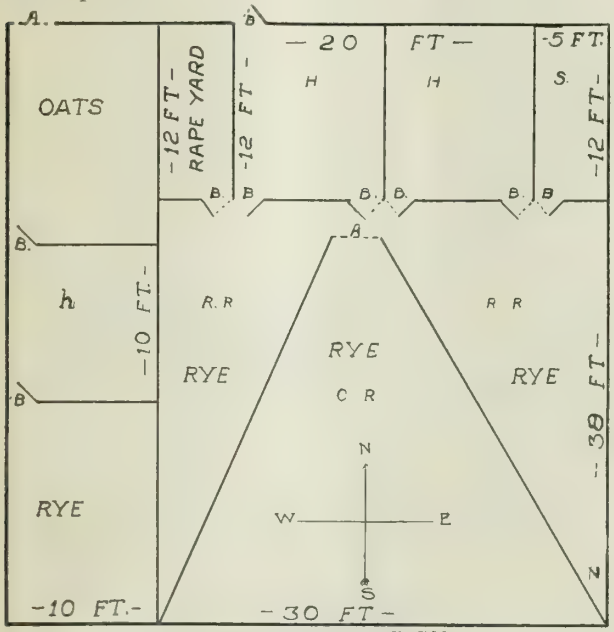


DIAGRAM FOR CITY FARM.

A.—Gates. B.—Doors. H. H.—Double house. h.—Mating house. R. R.—Regular runs for layers. C. R.—Changeable runs. S.—Setting shed and store room

In the small house we keep ten to fifteen head of special breeding birds, with thirty-five head in each section of the large house, making eighty to ninety head in all. The breeding birds run in south pen for two weeks, and in north pen one week, as the oats will not stand pasturing as much as the rye, aside from the advantage of the southern exposure.

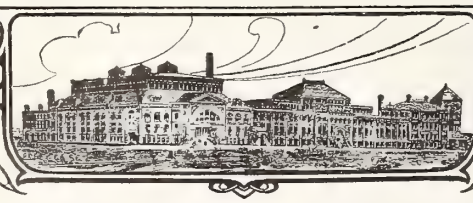
The birds in the large house are given the center yard week about, leaving it unoccupied a week between times. We keep a constant watch on this center pen, not allowing the birds to pasture it too closely, and in this way have kept it green and well sodded. The regular runs for the large house are seeded frequently and allowed to get a start while the birds are pasturing in center yard. In changing the flocks around in this way we have had no difficulty in keeping the birds healthy and doing well, and it is not difficult to keep their quarters reasonably clean and birds looking well. Fanciers in town can, by adopting this plan, have birds looking about as healthy and well kept looking as if the birds were on range.

We hatch eggs from special mating house only, and therefore keep only two males, allowing one male with the flock at a time. From this mating we get nearly double the number of eggs we are able to incubate and raise the chicks, since we only have room to handle a very few for commercial purposes, with the best used to replace females no longer of value as layers. With a flock of this size we are in a position to know which ones are paying and make it a business to discard loafers and those which do not come up to our standard of profit winners. A bird that does not bring in something for her feed is either marketed or eaten, and by this careful management we get a good percentage of eggs and make a fair profit. By July all culls or loafers are sold off, that we may make room for our young stock. The remaining yearling hens are removed to the large house and given the two regular runs, all other runs being used for the young stock, until housed in the fall.

SINGLE COMB R. I. RED.
Cockerel heading best pen of L. W. Maxson, Scranton, Pa.

On a plant of this size, it is possible to always have strictly fresh eggs for home use, with enough to sell to pay for food and care, besides a neat little profit from culls or other birds sold. In fact, you can have nearly everything the larger plant fanciers have, but not so much of it. You can raise birds good enough to win at the local shows if you start right and keep up with the times in your breeding.

I know a number of real live fanciers who have very small plants, yet make the boys "go some" when their birds are entered in competition at the shows. There are a good many of this kind that carry sizeable ads in our leading poultry journals and they raise the stuff to back them up with. Some of these men are an honor to the fancy and will some day be heard from, when they are able to have a patch of this good old soil large enough to make a real business of their undertaking.



If you have the real fancier spirit, or want to supply your own table with fresh eggs and poultry, try a plant something after this style.

About four dozen eggs are given as an average for the annual output of the turkey.

It will require seven pounds of skim milk to equal a pound of lean beef for flesh-forming qualities.

Don't be shy or have shy chickens; get acquainted.

THE BOSTON SHOW

Eighteenth Annual Exhibit, Held Jan. 13-17, 1914.—A Wonderful Collection of Quality Displayed in Great Classes and Handsomely Exhibited With Decorations.

By H. P. Schwab, Eastern Representative A. P. J.

IF desire and like create habit, then we can fully account for Boston's great, grand and glorious entry and exhibit of 1914. Billy Atherton has the habit of making each succeeding Boston show greater and better, and long since we have given up the idea that there was any limit to his capabilities. We have come to expect this of him and for twelve months every year the question with thousands of breeders and fanciers is, "What next?" This eighteenth annual show was so far ahead of all previous exhibits that we won't dare draw comparisons here. It was simply a "monster beautiful" with untold value to the fancy. It was Mr. William B. Atherton's greatest and most successful work, an ideal exhibit which reflects the greatest credit to him and to the loyal breeders who made this show possible which will have its effect and influence for a generation to come.

Friends take heart. Mr. Atherton has already promised us a greater show in January, 1915. He has always kept every promise made, and will surely keep this one, so let us all consider it a personal duty to do our share, be it great or small, to do it well and loyally, for Atherton and Boston. To President Lowell and Mr. F. H. Robie also every consideration is due.

The entry this season was larger than ever before by a thousand or more. The classes were grandly filled with quality birds seen in beautiful condition. An idea of the size of this exhibit can be had from the following: Poultry, single entries, 2,769; in pens, 1,100; ducks, 90; geese, 80; turkeys, 63; Bantams, 340; pheasants, pea fowl and wild ducks, 26; utility, 172; displays, estimated, 800; pigeons, 2,596; dressed poultry capons, etc., 53; eggs, 131; pet stock, 213, making a grand total of 8,433 entries.

The banquet was held on Tuesday evening, as usual, with close to 200 exhibitors and George W. Weed present, with plenty of eats, music, and two dancing chickens. The speakers were prominent poultrymen, and with the only toastmaster, Billy Atherton in charge, the event was one of unusual enjoyment for all.

The "Flea" banquet was held on Wednesday evening, with fifty members present, and twenty that jumped in. This association is very strong in that section and we hope annual meetings will be held there. The climate and the temperament of the exhibitors is all right there.

Boston has long been famous for its decorations and the tasty manner of arrangements and displays. This year, with a record entry and every inch of space of value, the trimmings and decorations were as liberal as usual and the exhibit was one to make the visitor feel glad all over.

Veterans' day, as usual, was observed and largely attended by our old-time friends. Many club meetings were held and all were well attended. Specialty clubs have at last come into their own and are doing excellent work.

We have but one kick to make; it is our first and we hope our last one. For several years the poultry journals have had special space at the show on the main aisle, but this year they were moved back and away in all sections of the two buildings, so that a guide was required to find them. This, to our notion, is not right and we hope in future the journals will have their old locations again; it is only fair to hope.

The crested breeders made good with a very large entry in their several varieties. All were seen at their best, the Houdans particularly fine. We don't believe we have ever seen a class as

U. R. FISHEL'S AD in this issue will interest you. Read it.

SILVER CAMPINES GOLDEN

EGGS! EGGS! EGGS!

From Most Popular Breed in America!

Again we head the procession with our superior matings.
Our birds swept the deck wherever shown in good hot classes.

AGAIN OUR YARDS ARE

THE PACEMAKERS OF AMERICA

Our matings this year have never been more carefully selected. To popularize the breed, will offer our Champion Matings at $1.00 per egg. High-class matings, 50c per egg. Good matings, $4.00 per fifteen. First come first served.

If it's Campines you want, we have them. There is nothing better anywhere. Send in your name on a postal for mating list. It is now ready and gives a description of the best Campines in America.

MANHATTAN FARMS, GEO. E. NOETH, Owner
BRIGHTON, N. Y.

good and rich as this one was. The White Houdans were a feature and Mr. Bearman, the originator, has done splendid work.

Sensational and feature winnings were made in several of the great classes. In Barred Rocks Mr. H. D. Riley made a wonderful record, as did Mr. Joseph Russell in White Wyandottes. He bought the first cockerel so as to own all five first prize winners. Mr. Haldie Nicholson won about all in Blue Orpingtons in a great class of birds, while Mr. M. F. Delano made a beautiful record with White Orpingtons, his only entry. In S. C. Black Minorcas Mr. W. A. Smith had it all his own way with an elegant line, and here again was seen the wonder display of W. F. Black Spanish shown by R. A. Rowan. While these breeders made exceptional winnings others did nearly as good and every award won at Boston has value to it.

On the stage in the main hall were the displays of Mr. William H. Cook of Orpington, England, and Mr. Clem Watson, Mr. Cook with all varieties of Orpingtons and Mr. Watson with Games, Leghorns, Cochins and Bantams. We hope these friends will come again.

The Exhibitors and Their Winners.

Plymouth Rocks.

There can be no question but that the old and reliable Barred Plymouth Rocks are still the general favorites; while always very popular they have more than kept pace and during the past five years show wonderful progress and are more than ever the "safety valve" of the poultry industry. Here they were the largest and leading class in this gigantic exhibit, with 307 birds in line, a valuable and beauty display, with Mr. Henry D. Riley, Strafford, Pa., the leading winner as follows: Cocks, 3-4; hens, 1-4-5; cockerels, 1-3-5; pullet, 1; pens, 1-3; cockerel-bred pullet, 3-5; cockerel-mating pen, 2, and specials for shape and color male, champion male, best display, etc.

We commend Mr. Riley on this showing; his males were in excellent condition, bright and clean barred and dandy heads and finish; females close up. First pen evenly mated, of finest quality. Champion male was the cockerel in first pen, a corking good one.

Mr. Haldie Nicholson, Leominster, Mass., a regular winner here in the past, entered four males only and won cocks 1st, 2d and 6th; they were bright, fine birds, with most wonderful underbarring. To have such under-barring with clean surface is the question, and Mr. Nicholson has it to an unusual extent.

The Pittsfield Poultry Farm, Pittsfield, Me., while unlucky in the award column, exhibited a fine line of birds, winning cock 5, pullet 5-6, pen 2, cock-

FELL'S FAMOUS WHITE WYANDOTTES AT NEW YORK

Madison Square Garden, December 26th to 31st, 1913, win the most wonderful record by defeating all Champions. No other breeder has ever made such wonderful winnings at New York. My winnings complete are:—

First Cock, First and Third Hen, Second, Third and Fourth Cockerel, Second and Fifth Pullet, First Pen, First Display.

I have won First Cock four times, First Hen twice, First Cockerel once, First Pullet twice, First Pen three times, First Display three times in four showings at New York. Catalogue of the finest White Wyandottes ready Jan. 15th.

From the **Best Pens** we have ever mated at **$5.00** per setting straight. Send for our descriptive mating list, it's free, write now. When writing mention Am. Poultry Journal.

SCHWAB BROS. BOX 451 IRONDEQUOIT, N. Y.

erel-bred hen 1, pullet-bred cockerel 6, cockerel-bred pen 6, pullet-bred pen 2. Here they also made their first exhibit of White Rocks. Their two display pens made a fine appearance.

Mr. C. V. Cassidy, Lancaster, Mass., won pullet-bred cockerels 2-3 and pullet-mating pen 1. Mr. Cassidy breeds the pullet line only and here exhibited in these two classes only; his pen was a gem.

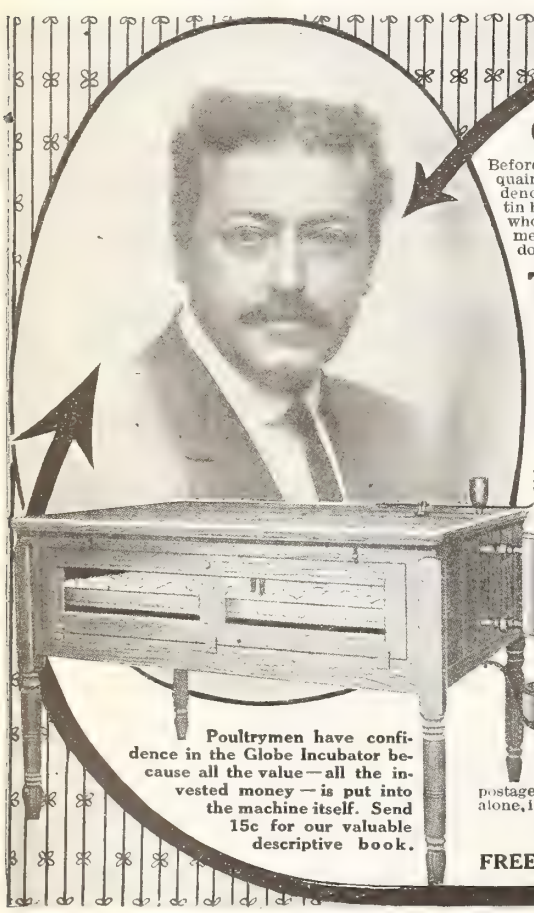
Mr. C. H. Shaylor, of Lee, Mass., won pullet-bred cockerel 1, pen 4, cockerel pen 3 and cockerel-bred hen 2.

Mr. A. C. Hawkins, Lancaster, Mass., had a display of two pens of his "Royal Blue" Barred Rocks and nothing for competition. His great winnings at the late Chicago show were still ringing in his ears, so he entered for display only and to show the natives his stock and the quality it took to make the record at the Great Western Show. A friend here gave Mr. Hawkins a circular Mr. Hawkins issued in 1879 that he had received that year by mail. We wished to reproduce this later if we can get him to part with it. You will note Mr. Hawkins has been breeding for some years; yes, over thirty-five of them.

White Rocks also were a royal class, with a total of 180 birds, and with quality and conditions very fine. The Bonnie Brook P. F., Saratoga Springs, N. Y., made the best record here by winning cock 1-2, hens 2-5-6, cockerel 3, pullets 2-4, pen 5, special best display, special best cock and three hens, special best cockerel and three pullets, and the $100 silver challenge cup for best White Rock male. Mr. L. C. Bonfoey, the manager of these farms, is an old and noted breeder of this variety and has been a prominent winner for many years. Louie knows the birds and how to breed and show them, and we wish him every success, for he well deserves it. Note his S. C. W. Leghorn winnings.

Other winners were A. H. Harris, William E. Wade, Paul G. Springer, C. W. Pratt, S. P. Greene, S. Knowles, etc.

Buff Rocks, a fair-sized class, with first cock a beauty and first cockerel one of the best out this year, owned by Ed. H. Lichtenwalter, Girard, Pa. He also won cock 4 and pullet 5.



Partridge Rocks, a very large and fine class of birds, with exceptional color and very fine type the rule. The Bonaparte Park Poultry Ranch, Bordentown, N. J., won cock 2-5, hen 4, cockerel 2-3-5-6 and pens 1 and 2. Other winners of worth were F. R. Sweet, F. L. Loyd, G. S. Buxton, Faye Howe, William E. Denis, etc.

Mr. Paul Klingbeil, Walpole, Mass., did not exhibit this year, but displayed two pens of his beauties that made a

VIBERT TRAPNESTED REDS

A flock of beautiful, deep, soft, GLOWING CHERRY TO MAHOGANY BRILLIANT RED to the skin, Rose and Single Combs, hatched and raised BY HENS ONLY, on absolutely free clover range, kept in wide open front colony houses, WIDE OPEN ALL WINTER. VIBERT RED FARMS, BOX 70, WESTON, NEW JERSEY

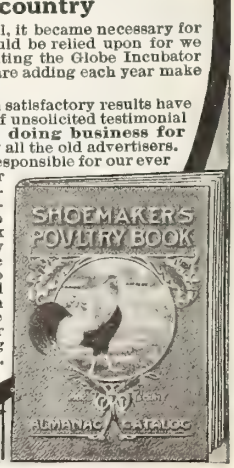
Poultrymen have confidence in the Globe Incubator because all the value—all the invested money—is put into the machine itself. Send 15c for our valuable descriptive book.

It Is Well Worth While to Consider "the Man Behind"

Before placing your order for an incubator or brooder, it will pay you to get acquainted with the manufacturer. Make sure that you can place your entire confidence in him and his machines. There are too many "dry goods boxes" with cheap tin heating arrangements sold now days for incubators and they are made by people who know very little about the chicken business, artificial incubation and its requirements. They are sold exclusively by "Hurrah advertising" and the manufacturer doesn't care if he ever hears from the customer again.

The Globe Incubators and Brooders

are the best machines on the market and we can prove it.



The most modern machinery and the most skillful workmen that can be found enter into the construction of the Globe Incubator and Brooder, and no machines leave the factory until they pass the most rigid examination, and the great hatches which our customers obtain are the results of our twenty-five years of experience in breeding thoroughbred poultry and making incubators and brooders.

We sell more thoroughbred chickens than any two of the leading advertisers in this country

In order to raise this great number of fowls which we annually sell, it became necessary for us to invent our own machine, one that would do the work and could be relied upon for we had tried all the leading machines manufactured before inventing the Globe Incubator and Brooder. The remarkable improvements which we are adding each year make the Globe the best artificial hatcher on the market today.

WE HAVE SOLD THOUSANDS OF THEM. Such satisfactory results have been obtained from our machines that we have thousands of unsolicited testimonial letters on file open for your inspection. **We have been doing business for over a quarter of a century** and have outlived nearly all the old advertisers.

Square dealing and satisfaction to the buyer have been responsible for our ever increasing trade. We want to tell you more about our great factory, our mammoth poultry plant, and our methods of doing business. We have just issued our annual poultry book and guide which has cost us thousands of dollars to produce. It is not a catalog exclusively, but as a text book on poultry breeding in all its branches it is superior to any book issued. It tells about our great poultry farm where we raise and handle thousands of high-grade birds that go to every part of the world each year. But come for yourself and see—we have the goods. Write to any bank or express company in Freeport and they will verify every statement which we have made here. Be sure and send for this book today. Send 15c to cover postage, etc., and if you think that the information on poultry keeping alone, in the book is not worth the money we will cheerfully refund it to you.

C. C. SHOEMAKER

FREEPORT Box 605 ILLINOIS

Don't Forget—The above is the only Incubator manufactured in Freeport, Ill. at the present time.

most attractive appearance. Mr. Klingbeil has won here for years, also at New York and other leading shows and contented himself by selling winners this season.

Silver Penciled Rocks were fair in numbers and very fine in quality. All awards went to Bonaparte Park Poultry Ranch.

Columbian Rocks, a class of thirty-eight birds, with George H. Dexter the leading winner; some nice birds here.

Wyandottes.

In the Whites was found one of the grandest classes of the show; the quality was very even and select and condition of the best; there were 192 birds shown. In this beauty class Mr. Joe Russell, Toronto, Ont., made a record equal to the best made here by winning four of the five first prizes; but not to be equaled, he promptly bought the other first winner, and his record now is cocks 1-5-6, hens 1-2-4, cockerels 1-3-6, pullets 1-2, pens 1-3-5, best display and all specials. This splendid record means much more than appears at first sight and is a credit to any breeder. Mr. Russell is a royal fancier and although he has made grand records in the past, none can approach this in value. The winning females were all we could desire; cocks splendid; one unmentioned looked great to us. First pen a combination of every quality required to make a great Wyandotte. Heads a very high average in this whole line.

Other winners were J. F. Hollis, Onlya Farm, H. W. Holton, J. Jahnle, H. J. W. Fay, F. E. Noyes, G. E. Mann, etc.

Mr. Arthur G. Duston and Mr. J. W. Andrews attended as visitors only, and we believe they both have been selling good ones. Mr. Duston's win at New York gave him a very satisfied look. It is his due. Mr. Andrews has been showing here for sixteen years and has made several records at this grand show.

Black Wyandottes, a good class of good birds.

Buff Wyandottes, a class of seventy-one birds, many as fine Buff as we could wish to see and shape of the best. First cock a real beauty, fine type. First cockerel a bird of promise.

Partridge Wyandottes, not as many as usual; they had the quality of a large class.

Silver Penciled Wyandottes, one of the two finest classes we have ever seen, and first pullet the finest specimen of this variety ever shown; type fine and color and markings phenomenal. First hen a beauty in shape. Many other very high quality birds here.

Columbian Wyandottes, sixty-one birds and a class full of quality, with several exceptional birds. Mr. Jas. E. Perkins, West Stoughton, Mass., did things here by winning cock 1, cockerel 1, pullets 3 and pen 1. Mr. Perkins has the habit of winning, which we can see in his birds; both his winning males were birds of highest quality, good heads and the best of markings, with ideal type.

Silver Laced Wyandottes, a very large class of very fine birds, general quality and conditions of the best.

Golden Wyandottes, a beauty class in size and numbers. Mr. Loren H. Brown, Lunenburg, Mass., won cock 1-2-4-5, hens 1-3-6, cockerels 1-2-4-5, pullets 1-3-4-5, pen 1, best display, etc. Mr. Brown is an old champion of this variety and

PALACE N. Y. SHOW, 1913

WINNING BARRED PLYMOUTH ROCKS

In a class of 213 birds, bred and shown by America's Leading Breeders in one of the largest and best classes ever exhibited, I won **Special First for Best Cockerel,** Mating Pen, Second Pullet Mating Pen, Fourth Exhibition Pen, **First and Third Pullet-bred Cocks,** Fourth Pullet-bred Cockerel, Second and Third Cockerel-bred Hens, Second and Third Cockerel-bred Pullets. **Specials, etc.** A record of merit in all classes.

Palace, New York Show, 1912

In a class of "Royal Merit" my winning First Prize Pullet was the sensation of the entire class. I also won Second Pen, Second Hen, Fourth Cockerel and Specials. At **Madison Square Garden, New York, 1912-13,** I won Seventh Pullet. This line has been bred for years in line and has made records at several shows. Choice stock for sale at all times, selected breeders a specialty in trios and pens, mated to produce superior quality. **Eggs for Hatching** from selected exhibition matings, $10 per setting. Utility mating eggs at special prices of $8 per one hundred. **Baby Chicks,** $9.00 per fifty, $15.00 per one hundred. Write me your wants, I can and will please you. My utility lines are exceptionally heavy layers. When writing please mention American Poultry Journal.

FOXHURST FARM : LIME ROCK, CONNECTICUT, U. S. A.

has brought them up to their highest value and best quality.

American Dominiques—There was a very nice class of these old favorites; there should have been more; but they could not be much better in quality. Mr. A. Q. Carter, Freeport, Me., won cocks 1-3, hens 3-4-5, cockerels 1-5, pullets 1-3-4, pen 1. This line has the correct type and the real Dominique quality. One of Mr. Carter's hens seen here was a winner for five years and laid an egg every day during this show, while she also sported the 4th prize ribbon.

Rhode Island Reds.

In Single Combs 178 birds were shown with several of the best known lines represented. The general quality was of the best and in color and condition all one could desire to see. The United Breeders, Inc., South Braintree, Mass., winning cock 1, hen 4, pullet 4. In Rose Combs, cock 2-5, hens 2, cockerels 2-4-5, pullet 6 and pen 1. In specials they won the State cup for best display in Rose Combs, challenge cup for best male of both varieties, and the eastern trophy for best display both varieties. We hope to see this full line soon and tell our readers of it.

Mr. Harold Tompkins, Concord, Mass., won on Single Combs cock 4, hen 5, pullet 3, pen 1 on both old and young. In Rose Combs cockerel 3, young pen 1, old pen 4. Showing four pens, he won three first prizes, a record hard to equal.

Mr. Lester Tompkins, Concord, Mass., won in Single Combs cock 3-4-6, hens 1-6, cockerels 4, pullets 1-5-6, pen 2-5; in Rose Combs cock 6, cockerel 1, pen 3.

Dorkings.

In Silver Grays a beauty class with very extra quality; the White and Colored small classes.

Brahmas.

Light Brahmas—A wonder class of 222 birds, with many of the old timers in line with large strings of beauty birds. Messrs. Balch and Brown, Manchester, Conn., won cock 4, hen 3-4, cockerel 2, pullet 4-5-6, pens 2-6.

Other winners were J. W. Shaw, W. A. Hendrickson, Q. H. Merrill, F. P. Johnson, Willow Brook Farm, H. B. Tarr, A. V. Prescott and E. W. Rankin.

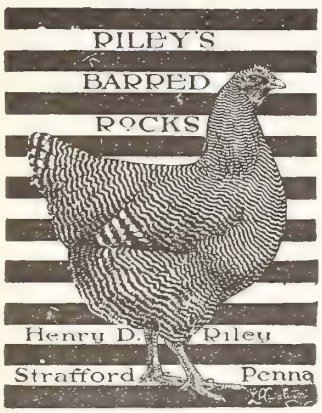
Dark Brahmas—A good class to see.

Buff Brahmas—A small class.

Cochins.

In Buffs one of the most beautiful classes was shown; color wonderful; feathering perfection and type of the best.

Partridge Cochins—Up to every requirement and a fine, large class of birds. Two display pens of beauty and quality were very attractive.



Black and White Cochins—Small classes, but very nice birds.

Orpingtons.

Buffs a fine class of birds that should have had more care. The Sunswick Poultry Farm, South Plainfield, N. J., made a fine showing and won cock 1-4, cockerel 5-6, pullet 2-4-5 and pen 1. Both their cockerels were of extra fine shape and sound color and should have been placed higher up; this was most evident.

Other winners were C. N. MacNear, G. E. Bessom, William Cook & Sons,

The Riley Trade Mark of Perfection.

Whenever you see the "Bars," think of Riley's Rocks, Barred of course.

Riley's Barred Plymouth Rocks

Have been among the leaders for the past three years at

Madison Square Garden

where they have made a reputation that places them in the very front rank as one of America's leading strains. This year they sought fields anew, and at

The Great Boston Show

where the entry was the largest and the quality the finest, and the competition the greatest of any of the Eastern shows, my birds made an enviable and wonderful winning. See last month's issue of the American Poultry Journal for my complete winnings.

At the Indianapolis Show

where the Annual Meeting of the American Barred Plymouth Rock Club was held, and in the finest collection of Barred Rocks that has ever been gathered together in the West, my birds were again the principal winners, as follows:

Cock, 1st and 4th.
Hen, 1st and 6th.
Cockerel, 3rd, 4th and 7th.
Pullet, 1st and 5th.
Exhibition Pen, 2nd.
Pullet Bred Pen, 1st.
Cockerel Bred Pen, 2nd.

The American Barred Plymouth Rock Club's Grand Trophy Cup for the best Cock, Hen, Cockerel, Pullet and Pen; Specials for the Champion Male and Champion Female; Special for the best colored Female; Special for the best display from the Middle or New England States, and many others.

As has always been the Riley custom, I will mate up and sell eggs to my customers from every bird on my farm. You positively get my very best, and get just what you pay for. My wonderful success in the past has been due to my being able to furnish my customers with eggs that hatch winners. You do not have to buy them from me in the fall. If you want to buy from a man who has the best **and will sell you his best,** I ask for your patronage.

My Illustrated Mating List is now ready to mail. It will give you a complete description of every mating on my farm and the price of eggs. Money spent now for eggs will be money saved in the fall. Try me and see if you will not become one of my satisfied customers. I have 300 fine breeding Hens and Pullets, of the same blood as my winners, that I will sell for $2.00 each, or less in large lots; also fine Cockerels to mate with them for the best results. Write me at once.

HENRY D. RILEY Box B Strafford, Chester Co., Pa.

Mrs. E. S. Everett & Son, C. A. Wright, J. C. Reid and C. E. Seigel.

Black Orpingtons—A very rich class of birds and nice condition a feature. The winning pullets a royal class.

Blue Orpingtons—One of the best quality classes seen and large in numbers. Mr. Haldie Nicholson, Leominster, Mass., won cock 1-2-3, hen 4-6, cockerel 1-2, pullet 1-5. Mr. Nicholson has made a grand success with this variety and has sound color and excellent type.

Mr. W. H. Depper, South Lincoln, Mass., won cock 4-5, hen 6, cockerel 3 and pen 1 on a beauty, finely mated and of good shape.

The Blythewood Poultry Yards, Mt. Kisco, N. Y., won hen 1, cockerel 5, pullet 2-3.

The S. C. Whites were the banner class of the Orpingtons, with 155 birds competing. In this beauty class Mr. M. F. Delano, Vineyard Haven, Mass., won cock 1-6, hen 1, cockerel 2-3-5, pullet 1-5-6, pen 1, best display and all specials. This was one of the greatest wins at the show and a most deserving one, the birds in excellent condition and of finest quality. First cock should be called "Revelation."

Other winners were William Cook & Sons, the Cande Farm, E. Sites, H. M. & G. H. Austin, L. E. Pierce, Colonial Farm, J. A. Scott & Son.

Langshans.

A grand class of ninety-one birds and of surprising quality, beautiful color and most excellent type. The winners were all extra fine birds and there was the best of quality left unmentioned. We are delighted with the showing these and other old favorites are making and we want to see the good work kept up.

White Langshans—A small class; they should do better.

Leghorns.

In S. C. Whites a great large class of 131 birds faced the judge, that for general quality were good to see; the conditions of some were excellent. The Bonnie Brook Poultry Farm, Saratoga Springs, N. Y., were great winners here, taking cock 1-6, hen 5-6, cockerel 5, pullet 4. Their best cock came late and was not considered. This line surely has a future in the hands of Mr. Louie Bonfoey.

The Skyland Farms, Sterlington, N. Y., entered only two pens and won 1st and 2d. Both these pens were wonderful in quality and mating; the males very superior and the females beauties of finest type, color and condition.

The Rancocas Farms, Brown's Mills, N. J., won cock 3-4-5, hen 1-2, cockerel 2-4-6, pullet 3-5-6. A grand win in this class and a credit to this line. Mr. M. L. Chapman, the manager, also judged the White Rocks at this show, so could not show in those classes.

S. C. Brown Leghorns—Here, like at other shows this season, were a fine large class with quality in every bird seen. We believe we have seen more good Brown Leghorns this year than ever before. The winners here were Grove Hill Poultry Yards, Williams Bros. & Brace, H. F. Becker, H. W. Weeks.

R. C. Brown Leghorns—A dandy class. The Turtle Point Farms, Saratoga Springs, N. Y., winning cock 3, hen 3-5-6, cockerel 1-2-3, pullet 1-3-4 and pen

NIEMANN BROS. MFG. CO. Box 677 MT. OLIVE, ILLINOIS

1. Others were William Hipkiss and N. B. Hartford.

S. C. Buff—A fair-sized class; some good color.

S. C. Black—A very rich class, with Turtle Point winner.

Minorcas.

The class of S. C. Blacks, the best seen here in years, Mr. W. A. Smith, Metuchen, making a big noise here, winning cock 1-3, hen 1-3, cockerel 1-2-3, pullet 1-2-4, pen 1. All color and shape specials on both male and female, best display, special for best three cockerels and for best three pullets and a total of eight others.

R. C. Blacks—Up close in both size and quality; the winners very fine birds and were well shown.

Houdans.

The largest and finest class of this variety we have ever seen, with 157 birds competing. The winner and several others were of finest quality, many sensational. The breeders and the club deserve every credit for making this grand showing and we hope they will keep it up. With classes like this the Houdans are coming into their own, for if this variety received due recognition it sure would be among the leaders at all the shows. Breeders, we congratulate you on this class and promise our aid for this sound and reliable variety.

Mr. James Abernethy, West Pembroke, Me., won hen 1 and pen 1. Hen of fine size, form and color and grand crest. Pen fine in mating and a beauty male.

Mr. J. L. Metzler, Findlay, Ohio, cock 3, hen 5-6, cockerel 1, pullet 5, pen 3. First cockerel a wonder in quality and finish. Mr. Metzler is one of the oldest breeders and has won for many years.

Mr. Harry Taylor, Toronto, Ont., won cock 2 on a beauty that was misplaced, so someone else has credit.

Other winners were G. H. Springman, E. A. Wight, J. R. Taylor, F. L. Woolner, M. Blagden, W. H. Bassett, Wheat Bros., W. F. Bast, etc.

White Houdans—A good class, all shown by D. D. Baerman, Dunellen, N. J. Blue Houdans by J. C. Kriner, Stettlersville, Pa.

Polish.

A class of just 100 birds and a very attractive lot seen at their best. The winners a very select lot.

Golden and Silver Polish—A good lot and fine classes. All varieties were seen to advantage here and one of the largest classes ever put up.

Hamburgs.

Black Hamburgs—Numbered 90 birds.

Golden Spangled—Fifty birds.

Silver Spangled—Seventy-five birds.

Other Hamburgs in good proportion; a very complete class; each variety seen at its best.

Campines.

In Silvers a nice class of birds. Mr. M. R. Jacobus, Ridgefield, N. J., won hen 2, pullet 1.

Mr. E. F. Dean, South Williamsport, Pa., won cock 2, hen 1, cockerel 3-6, pullet 2-5, pen 1.

Golden Campines—Fair-sized class.

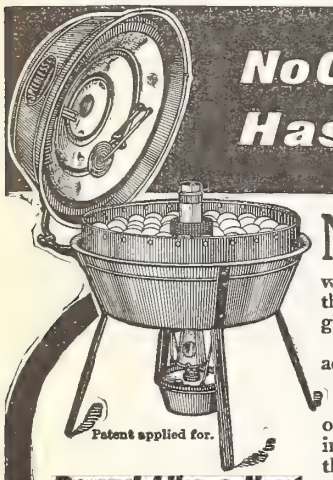
Buttercups.

There were 83 birds of this variety shown, which insured good classes. They made a very good appearance.

Other Varieties.

Dark Cornish—Only a fair-sized class. We better get John Ward after this for next year.

Faverolles—Small class of good quality.



The same for Lakenvelders.

White Laced Red Cornish—The best class we have seen; quality very fine all through.

Games of all varieties were seen to advantage.

Red Sussex—A very fine class.

Blue Andalusians—A large class of extra quality. The 1st and 2d cocks,

No Other Incubator on Earth Has the Features of This

$6 DELIVERED

NEW methods—new processes—new labor saving materials—these and 25 years' experience have made possible the latest addition to the great Peerless Blue Ribbon line of incubators—the little metal wonder, the "Peerless-60." No other incubator you have ever seen has the design and features of this. No other incubator you have ever used has given the results this is giving.

More than 11,000 of these incubators were ordered before one line of advertising appeared—months before the hatching season. Why? Because in design, in results, in economy, the Peerless stands unique—the climax of the genius of Sheer in incubator design. One poultryman, after test, ordered 50. With even just one Peerless Hatcher and a few feet of space in your back yard you can add $150 to $200 to your income. Results—that's the answer.

Round Like a Nest

No cold corners. The Peerless is just nature, that's all. Natural Heat. Natural Ventilation. Natural Moisture.

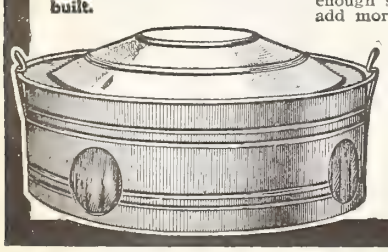
In the Peerless, eggs are heated **from above** with the patented triple wall heat radiator. All heat is used—**that's economy.** Regulation of heat, ventilation and moisture are all automatic. The machine is equipped throughout with the famous Sheer fixtures. The wonderful Sheer Wafer Thermostat Regulator **automatically** turns lamp flame up and down to meet temperature in egg chamber. Overheating of eggs is impossible. It uses less oil than any other incubator on earth of same capacity. Four of these machines, with a capacity of 240 eggs, will use **one-third less oil, require less attention and give more healthy chicks from the same quality of eggs than any 240 egg machine ever built.**

This is the **first** practical, **all metal,** fireproof, everlasting machine ever produced. The **first** machine of its size with a perfect heating and heat distributing system. The **first** incubator ever produced alike adapted to the **largest** poultry raiser, and the **beginner** with one machine as well.

Why the "Peerless-60" Is This Size

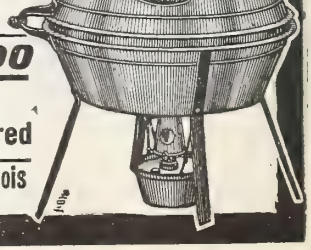
Experience has **proven** the small machine the most profitable. **Nature** knows that eggs to hatch must be newly laid. No man ever lived who could be sure of being able to place hundreds of eggs of equal fertility in a machine all at one time. The Peerless-60 is the absolute unit. **Small** enough to give the greatest efficiency. **Large** enough to give the greatest economy. **Good** enough so it will last for years—just add more units as the plant expands.

Not a "Leader"



The Peerless-60 is not a bait to get you to answer this advertisement with the hope of selling you a higher priced machine. It's not a cheap machine designed to "get you interested." It is true that the price is absolutely unheard of. Never before has such a price been named on a highest grade machine, delivered—but remember the price is the price fixed by **enormous production, new materials, new processes, new design.** The Peerless-60 could be no better at ten times the price. Of no other incubator ever sold at anywhere near the price could this be said.

Let Us Send You the Facts



We could not tell you in ten times this space all the facts concerning this revolution in incubators. We want to put these facts in your hands. Let us tell you the story of the Peerless-60, why and how it was produced, how it is made—the wonderful new application of the principles of artificial hatching. You are safe in sending your order **now**—today, but if you wish, write us for the whole story.

Special Introductory Offer

When you figure the cost of an incubator figure its cost set down. Figure the freight. The special introductory price of the Peerless is $6.00, delivered to you. This offer is made to give the widest use to the Peerless in the least possible time. It may be withdrawn any time. Now is the time to secure the Peerless. Save the freight now. $6.00, delivered.

The Peerless Brooder all metal—fire-proof—heated but lampless by a simple device that gives no bother and keeps chicks healthy, comfortable and warm, no matter what the weather. It's of 60 chick capacity—a companion to the Peerless-60 Incubator. Here is the perfect brooder—the one you have wanted, for..... **$3.00 Delivered**

H. M. SHEER CO., 104 Hampshire St., Quincy, Illinois

World's Largest Manufacturers of Incubator Supplies

1st cockerel and 1st hen exceptionally fine.

Black Spanish—A great class of beautiful birds.

Anconas—A nice class full of quality.

Bantams.

Bantams were out strong in numbers. Fine classes were the rule, and it took the best to win. Rose Comb Blacks were beauties. Partridge Cochins very strong.

Water Fowl.

Ducks and geese were a large entry and were seen in all varieties. Among the winners were many notable birds with records and breeding worth.

Utility.

In the basement was the display of utility birds, an attractive feature of the show and a display I would like to see followed up. In this connection let me also mention the display of eggs, which numbered 131 entries. Eggs of all varieties and kinds were shown. The display of 10 dozen white eggs by Mr. M. R. Jacobus, which won first prize, was a feature in itself. Dressed poultry and capons were also seen here, making the practical feature of the show very complete.

Pigeons.

Are always a feature here, and the great entry this season was one of particular value. All varieties were seen to advantage and great classes of the most popular ones were shown.

The show was complete in detail. Every department was filled and each had its special features to attract. To sum up, it was worth the effort and more, and we must now work and hope for the next, which will be known as the Old Glory Show.

THE BALTIMORE SHOW.

The Maryland Poultry and Pigeon Association's Sixth Annual Exhibit Held at Baltimore, Md., January 6th to 10th, 1914.—A Beauty Show and Ranking Up With Our Best.—Feature Classes.

BY H. P. SCHWAB, EASTERN REPRESENTATIVE A. P. J.

TO those who fortunately have attended the Baltimore shows year by year, have seen its simple splendor, its magnificent armory, and have enjoyed the hospitality of its members and breeders, there lingers a desire and a wish for time to pass so that we can enjoy more of them. There is no larger or finer show hall in the world, and when the exhibit is put on draped with our national colors and those of Maryland it is a sight most grand and impressive to see and long to be remembered.

The members of the association have a way of their own to entertain their guests, and no effort is wanting to make the stranger feel at home. From President Riggs down to every single member of the association, their one duty is to entertain, and they do know how. In Secretary George O. Brown they have one of the grandest characters in poultrydom, a man who has devoted his whole life to poultry and has been judging for forty or more years, and around him they have built an association of equal character and a show of wonder, beauty and value to the industry.

The exhibit this year was larger than usual. Many feature classes were seen and the display of ducks and water fowl the largest and best ever staged. The single entries numbered 2,296; pen birds, 925, and pigeons, 657, making a total, exclusive of display birds, of 3,878.

The breeders' banquet was held on Wednesday evening at the Hotel Rennert and proved a regular jollification, enjoyed by all. The "Flea" banquet followed on Thursday evening at same hotel. At this meeting the new officers were elected and are given elsewhere.

Many prominent visitors and breeders

IOWANA WHITE ORPINGTONS

Bred for Vitality, Productiveness and Quality

Winners at the Iowa and Illinois State Fairs; also at the Chicago Show and Iowa State Show. were noted and among them Mr. Chas. D. Cleveland, secretary of the New York Garden Show; Mr. Frank J. Eppele, of Stockton, N. J., etc.

The Exhibitors and Their Winners.

Barred Rocks are always a favorite class here and this year was no exception. There were 126 birds in line, the best from the yards of a dozen well-known breeders. Mr. Robert J. Walden, Middleburg, Md., an old winner here for years, made but a small entry and won cock 4, hen 1 and special for shape, cockerel 3, pullet 2 and 4. Mr. Walden also displayed here his famous pen of Barred Rocks that won the Storrs, Conn., national egg laying contest for two years, leading all other pens of this variety and for three (3) months led all the varieties and won the three championship medals. Mr. Walden has every reason to feel proud of his line and their records.

Mr. W. G. Boileau, Middleburg, Md., made a sensational record, winning cock 1-2, hen 3, cockerel 1-2, pullet 1-5, cockerel-bred hen 1-2, pullet 1-4, pullet-bred cockerel 2, pullet-mating pen 1 and specials.

Mr. Frank Harbaugh, Middleburg, Md., won pullet 3 and pullet-bred cockerel 3 on two entries. In S. C. Reds he won cock 2; in Rose Combs, hen 6, cockerel 2, pullet 2, pen 2; in Black Langshans, cocks 3 and 4, hens 2, cockerel 2 and 3, pullet 3 and 4, pen 1. These were a very large and strong class, the first pen a beauty in quality and mating.

Mr. A. E. Warner won first pullet-bred cockerel and other winners were O. C. Boileau, W. H. Matthal, E. C. Spain, C. H. Boschen and E. A. Grave.

White Rocks numbered 90 birds and for quality and condition were one of the best seen out this year. The Fairfield Poultry Farm, Fairfield, N. J., made a record win for this show on a line of birds of grandest quality, as follows: Cock 1, hen 1-5, cockerel 2-5, pullet 2-3; pen 1 and specials for shape and color. First cock a large, strong bird of extra type and grandest condition. The winning pen a charmer in mating and evenness of quality, shape and condition, the best of eyes and legs and positive white plumage. This is an old and reliable line that has made records for many years.

The Rockland Farm, Benson, Md., won cock 3-4, hen 2-3, cockerel 1-3-4, pullet 1-4, and pen 2. Cockerel a beauty, well finished and full of vigor. First pullet a wonder in form and finely shown. Second pen very strong, nicely mated.

Buff Rocks—A nice class with color a feature. Second cockerel a bird of promise, shown by Mrs. R. J. Walden, Middleburg, Md.

Columbian Rocks—Not as many as we would like to see; quality was high, with most awards to Louis P. Graham, Collingwood, N. J.

Partridge Rocks were one of the best classes ever brought together, with 105 birds competing. The winners were good birds, and there were other good ones also. First pen shown by Mr. W. F. Presgrave, Salisbury, Md., was for mating and rare high quality, one hard to beat; the male a fine bird of grand color, stands strong and females even, sound markings. Mr. Presgrave also won hen 5, cockerel 2 and pullet 3.

Silver Wyandottes were one of the great beauty classes of the show with 124 birds competing, there was quality here and to spare, a credit to the breed and the breeders. A. and E. Tarbox, Yorkville, Ill., won cock 5, hen 1-2-5, cockerel 5, pullet 4-5 and pen 1. Other winners were Silver Brook P. F. Dr. T. H. Charmbury, H. Kerl, Henry Steinmesch, T. K. McDowell, etc.

The White Wyandottes numbered 119 birds all told with the first cock and cockerels the stars of the class, both grand birds very nicely shown by Mr. Jas. J. Farrell.

Columbian Wyandottes very good and a few nice Buffs shown.

S. C. Reds brought out 96 birds and each class was well filled. The Schenley Heights Poultry Farm, Pittsburgh, Pa., won cock 1, hen 4, cockerel 2, pullet 5, and pen 1.

THE CARVER SYSTEM One of the greatest books ever written for the fancier who wishes to make good in the poultry world. Written by one who started ten years ago with but $20, who today owns a $10,000 Poultry Farm. Worth dollars to the beginner or fancier who is lagging and needs GINGER put into him. Price, $1.00. A. A. CARVER, SEVILLE, OHIO

Pedigree Breeding of Poultry

—OR—

THE SCIENCE OF POULTRY BREEDING

A New Book Just Out

By J. A. BICKERDIKE

TREATS especially on improved egg production. Gives correct scientific methods of Poultry Breeding, combined with the lifetime experience of an expert in this line. Mr. Bickerdike tells in a clear practical way how he has developed egg-production in his flock in a way that is permanent and sure of results, producing hens like Lady Showyou.

Lady Show You

The $800.00 Champion Egg-laying hen, was bred by J. A. Bickerdike, the author of this book.

The best book on poultry breeding ever written. Just what you need whether you have a dozen hens or a thousand. You cannot afford to go through this breeding season without it. One chapter, "Principles of Breeding for Heavy Egg-Production", is worth many times the cost of the book. To follow these principles will double your egg yield.

Dr. A. R. Hedges, Medford, Oregon, says: "This valuable book shows originality of thought and the results of years of investigation and experience in the breeding of poultry. It will undoubtedly bring forth much comment and criticism, for its principles are distined to revolutionize the present day breeding of poultry. Every poultry raiser should read it.

The Bickerdike Trapnest is Mr. Bickerdike's latest creation in Trapnests, covering fourteen year's experience in trapnesting. Endorsed by leading poultry breeders everywhere. "Very simple, effectual and certainlya winner."—Noftzger. "Better than high priced nests."—Halbach.

SPECIAL OFFER

Price of the book is ONE DOLLAR prepaid. Price of Trap, charges prepaid ONE DOLLAR. For a limited time we will send a copy of the book together with one of the new Bickerdike Traps, complete with full directions and right to make and use, all charges prepaid for $1.00. Satisfaction guaranteed or money refunded.

ORDER THE BOOK AND TRAP NOW AND BEGIN THE SEASON RIGHT

Address all orders to

Medford Trapnest Co., Dept. A3, Medford, Ore.

R. C. Reds also a choice class full of quality birds.

S. C. Buff Orpingtons a well filled class of high quality birds with first hen very good.

S. C. Black Orpingtons the largest of the Orpington classes, with the Whites a good second. First pullet a grand winner.

Light Brahmas with 55 birds made a grand appearance. The winners a beauty collection.

Black Langshans an exceptionally strong class with shape and grand color the features noted. Mr. Porter Elosser, Cumberland, Md., won cockerel 1, pullet 1. The class had 61 birds. We have before given the winnings of Mr. Frank Harbaugh.

S. C. White Leghorns numbered nearly 100 birds and was a royal class of quality. The Maryland Leghorn Farm, Cambridge, Md., with Mr. C. W. Bowman as manager won cock 1-2, hen 1-4-5, cockerel 3, pullet 1-5, pen 3 and specials, a beautiful record in a strong class. Their two winning cocks were fine, large, typical birds with grand heads and wonderful condition. First pullet a royal winner with choice head and of grand size and shape. This line has been very successful this year, having also won first prize pullet at the M. S. Garden, New York, Show. The many friends of "Billie Bowman" will rejoice at his pronounced success. Keep it up, Billy.

Other winners here were Gillingham P. F., J. H. Sellman, Jr., H. M. Keeney, W. H. Williams, Louis P. Graham, E. L. Buddington and Armstrong Bros.

Single and Rose Comb Browns, Duckwing and Columbian Leghorns were all well represented.

S. C. Black Minorcas numbered 50 birds and for quality were one of the best at the show. O. E. Remsen, Annapolis, Md., won cock 1-2, hen 1-3, cockerel 1, pen 1.

W. C. Black Polish, a beauty class of 50 birds, the honors pretty well split up. It was a grand class, very attractive.

Other varieties of Polish and all varieties of Hamburgs were seen to advantage here.

Dark Cornish, another beauty class with some of the best birds and greatest winners seen out this season, Mr. Courtland H. Smith, Warrenton, Va., won cock 4, hen 1-2, cockerel 1, pullet 1, pen 2-3 and many specials. Dr. W. A. Low, Catonsville, Md., won cock 2-3,

Young's Strain S.C.W. Leghorns

I HAVE NO OTHER BREEDS

They are the standard for all the Leghorns of all America, and the greatest layers of all domestic fowls.

FIRST PRIZE COCKEREL MADISON SQ. GARDEN, NEW YORK, 1912 1913.
BRED & OWNED BY D.W. YOUNG, MONROE, NEW YORK.

At the World's famous and Premier Show of America at Madison Square Garden, New York, for the past 13 consecutive years I have won best display and from three to five first prizes, every bird being bred and raised by me.

Winnings at Madison Square Garden, winter of 1913, were as follows:

A STUPENDOUS VICTORY

Cocks, First, Second and Fifth
Hens, Second, Third and Fourth
Cockerels, First, Third, Fourth, Fifth
Pullets, Fifth
Pens, First
Groves Trophy, value $500.
Elmhurst Sterling Silver Cup, value $150.
N. Y. State Cup, value $50.
N. S. C. W. Leghorn Club Medal for best cock, best cockerel, best pen and best display.
The Association $10 Gold Special for best display and Grand A. P. A. Medal, value $50, for best bird in whole show, all var. competing.

This bird is the most superb specimen that has ever been produced of any variety. This achievement was made possible from a thorough knowledge and scientific practice of line breeding for over 35 years, and from a strain that has been bred by our family since 1855, making it the oldest strain of Leghorns in all the World, the male line never having been broken by adding new blood. The **Young Strain Characteristics** follow through all my yards and my matings this year should be superior.

WATCH the Show Reports throughout the United States and Canada, and you will find that Young's Strain predominates and wins the coveted prizes and lays the greatest number of eggs.

Hundreds of the grandest cockerels ever bred, for sale. **Remember you cannot win without my strain.**

MATING LIST FREE, ADDRESS

D. W. YOUNG, MONROE, NEW YORK

cockerel 2-4-5, pullet 4, pens 1-5. Other winners J. N. Harvey and H. H. McCormick.

Silver Campines a feature class with even and rare quality, Mr. C. F. Rankin of the Schenley Heights P. F., Pittsburgh, Pa., won cock 1, hen 2, cockerel 1-3, pullet 2-3 and pen 2nd. Mr. C. F. Dean, So. Williamsport, Pa., cock 2, hen 1, cockerel 2, pullet 1 and pen 1. Goldens not so large a class.

Bantams numbered 477 birds with the B. B. Reds leading in numbers and were a select class. Pyle's a beauty class, Cochins in all varieties very strong. First Buff hen a wonder, Black Cochins a choice lot, classes very strong. Mrs. Wm. H. Moore, Chadd's Ford, Pa., won cockerel 4, pullet 2, pen 1. This with her Philadelphia winnings places her first among the year's winners.

This was a Duck Show in fact. There were ducks everywhere and then some. The duck clubs met here and the displays made were a credit to all classes and varieties. There were 356 single entries and 135 in the pens, making a grand total of 491 ducks. Pekins were a good, large class with quality very fine. Rouen's very large class and of beautiful quality. White Indian Runners the largest class shown. Colored close up. Penciled a very select lot. In Muscoveys, Aylesbury, Cayuga, Crested, Black East India, Blue Swedish, Gray and White Call and all varieties the classes were filled and were well shown. It was a very complete display, very handsome.

Geese were also seen in numbers, 119 competing. Toulouse, Brown and White Chinas and Embdens the banner classes.

Pigeons numbered 657 birds, including all varieties in good sized classes. They have the real Pigeon-Bugs there.

Several displays were seen to advantage in Poultry, Pigeons, etc. The exhibit of Danish White Leghorns by Armstrong Bros., Loch Raven, Md., was one of particular interest to us and to many of the visitors. These Leghorns are large, fine, strong birds and are noted layers, so it is claimed.

This exhibit had a grand beginning and a beautiful finish. It was very complete, evenly balanced and of superior quality. Baltimore has shown us grand exhibits and has led us to look for and to expect greater shows in the future. The members are loyal fanciers and we wish them every success; they deserve it all.

———o———

George L. Beveridge, of Durant, Okla., is organizing a stock company for the purpose of establishing an extensive poultry farm near Durant. Mr. Beveridge has had twenty years' successful experience as a poultryman and believes that a large poultry plant at Durant will prove a profitable enterprise.

E·B·Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Are Fashion's Proudest Birds

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

The record of my Barred Rocks at Madison Square Garden, 1913 and 1914—two years in succession—is the Capstone to their unexampled record for twenty-six years. For these achievements see opposite page and back cover page.

You are now thinking about eggs to produce the Silver Cup and Blue Ribbon winners for next season's shows

Think of the great satisfaction of winning prizes on birds you raise with your own hands—from the time the chick first sees daylight until the Blue Ribbon hangs on the coop in the show room. The delight of winning on a bird you owned all its lifetime cannot be described.

My Imperial "Ringlet" Eggs will prove a splendid investment

You may raise a single chick worth twenty times the cost of the eggs—a bird worth hundreds of dollars—hundreds of my customers have done this. Remember, the first prize cockerel or pullet at a great show always comes out of one egg.

The birds in my matings have wondrous beauty of even blue color and narrow, sharp, evenly divided "Ringlet" bars, outside and to the skin. They have fine heads, grand size, majestic shape, stylish carriage, good length bodies and backs of great breadth carried to low, well spread tails; besides they are the richest first prize New York winning blood in the world.

My matings are wonderful in their high quality and blood lines

Barred Rock breeders who visit my farm declare my matings are unequalled. I strongly urge all Barred Rock Fanciers to come and see these matings—they cannot be equalled in all America and I want you to see them—yon need this Imperial "Ringlet" blood and barring to win prizes.

My Eggs are the best that money can buy—They produce first prize birds

To produce the finest first prize show birds demands ths highest degree of expert knowledge—My birds are mated by my own hand.

Cockerel from "Ringlet" Eggs wins 6 first prizes

Mr. E. B. Thompson, Madoc, Ont., Apri 1, 1913.
Dear Sir:—
Kindly quote prices on one setting of eggs from your best cockerel mating pen. Out of the last eggs I got from you I raised a male bird that won 6 first prizes last year. He has never been beaten.
Truly yours, A. H. Watson.

I Will Help You to GREATER SUCCESS and LARGER PROFITS

Richly illustrated 70-page catalogue upon request.

EGGS from the finest Exhibition Matings in the World, $10.00 per setting; four settings $35.00; one hundred eggs $60.00.

E. B. Thompson

Lock Box 510, Amenia, N. Y.

DESCRIPTION OF THE WINNERS

At the Madison Square Garden, New York, Show.

By H. P. Schwab, Eastern Representative, A. P. J.

Barred Plymouth Rocks.

Cocks.—1st, a bird of wonderful surface barring a "Ringlet" indeed, good shape well finished; 2nd, a strong colored bird with wonder under-barring; 3rd we did not handle, he looked good from the outside; 4th, a noble fellow who won 5th cock last year and 6th cockerel before, he improves with age; 5th, a fine colored bird, stands well and good points; No. 11 cock unmentioned, the best cock we have ever seen in or out of the show room.

Hens.—1st, a beauty of wonderful contrast of color, snappy barred, a great winner, also takes female championship; 2nd, a beauty surface and under, very clean and straight barred; 3rd and fourth similar all of fine size and shape; 5th, not fully finished, great color and barring and nice type; No. 37 a rare hen of superior quality, a very strong class.

Cockerels.—1st, also wins special for champion male and special for best Plymouth Rock hatched in 1913 and both male shape and color specials, a bird of size, grand shape, narrow and cleanly barred and well finished, even in all sections; 2nd, close up and very similar in every quality; 3rd, of beautiful type, nearly finished, strong in surface and under-barring; 4th, very neat and narrow barring, the real "Ringlet" style; 5th, like the 4th, both not fully finished in tail. These five cockerels were all of the one line breeding with similar character in all. They are fine, of as even high quality as we have ever seen at any show.

Pullets.—1st, good; 2nd, very fine, even color, grand wing and nice head; 3rd, like the second, a fine specimen in all ways; 4th, not as even, fails a mite in neck, good barring and nice color; 5th, one of the finest barred females ever seen, under-barring wonderful, surface even, feathers all well tipped, size and shape of the best; No. 111, another of nearly equal worth; No. 91, a very nice shaped pullet of good barring; No. 107, another beauty and great winner; Nos. 121 and 123 very fine and rare specimens.

Pens.—1st, all that is good in Barred Rocks seen here, male a wonder in even color and narrow barring, females alike in size, color and barring, excellent wings and fine heads, eyes, etc.; 2nd, another beauty male well finished,

E·B·Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—winter of 1913, winning as follows:

First, second, sixth and eighth on cockerels.

First and sixth on pullets.

First, second and fifth on exhibition pens.

First on cockerel mated pen.

Second, third, fourth and fifth on cocks.

The Imperial Prize of the show, Sweepstakes special for champion male.

Sweepstakes special for champion female.

Diploma presented by the Amer. Poultry Ass'n for best cockerel.

Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety.

Challenge silver cup for best exhibition pen.

Special best shaped male.

Special best colored male.

Special best colored female.

Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, $25 special prize, presented by the New York Show for finest display.

All silver cups and cash specials - four times as many first prizes as any competitor.

More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibitor of any breed.

My Exhibit of 56 Birds Was the Best the World Had Ever Seen

Furthermore—The "Ringlets," exhibited by me personally, have won at New York a grand total of 32 First Prizes—more than double the number ever won by any competitor. No other Barred Rock breeder in the world has ever won more than 13 First Prizes in the entire history of the New York Show. **Mark the Difference.**

I am the only living Barred Rock breeder who has ever won all the Regular and Special Prizes on Pullets at a single New York Show, viz: **1st, 2nd, 3rd, 4th and 5th;** All the Regular and Special Prizes on Cockerels, viz: **1st, 2nd, 3rd, 4th and 5th** at one show. Both Sweepstakes Champion Male and Sweepstakes Champion Female at one and the same show in Madison Square Garden.

The Imperial "Ringlets" Are The Standard By Which All Other Barred Rocks Are Judged

To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, N. Y., blood mated to produce prize winners. Richly illustrated 70-page catalog upon request. It is full of original pictures of New York winners from life. When writing mention Am. Poultry Journal.

See my ad on back cover page for wonderful 1914 record at New York

E. B. Thompson

EGGS from the finest matings in the world, $10 per setting; four settings, $35; 100 eggs, $60.

Lock Box 510, Amenia, N. Y.

"Ringlet" First Prize Ckl. and Champion Male at Madison Square Garden, N. Y., 1910-1911. Sire of First Prize Champion Ckl., 1913. Grandsire of First Prize Champion Cockerel, 1914 at this same show.

grand style, females close up, grandly mated; 3rd, a beauty male grand in under-barring, clean surface, females a beauty lot just a mite immature, a pen of worth and promise; 4th, a grand, clean male of beauty form and females a worthy lot; 5th, a rich male not fully finished in surface, females exceptionally fine; No. 3317, male a dandy, females uneven; No. 3322, good male and nice females, a little immature; No. 3328, male unfinished and weak under, females a royal lot.

White Plymouth Rocks.

Cock.—1st, a bird in grand condition, we like to see longer bodies; 2nd, grand in shape and color, good head, etc.; 3rd, a noble fellow grandly shown; 4th, type and condition excellent; 5th, a strong dandy bird full of vigor. Hens.—1st, a charmer seen at her best, beauty type and quality; 2nd, very sweet in every way; 3rd and 4th, both grand hens, with quality evident; 5th, a strong hen in shape, color and condition. Cockerels.—1st, a most worthy bird of best of shape and quality; 2nd, another bird of great quality, full of character; 3rd, one of the best, a rare bird; 4th, similar to second, a good one; 5th, again the type we like, nice head; No. 177, grandly shown and of rarest type and quality. Pens.—1st, one of grand character evenly mated and well shown; 2nd, a great pen in every way very close up; 3rd and 4th, alike in quality, nice condition, general shape a feature; 5th, a dandy pen. It was a great class. Pullets.—1st, the gem of the class, shape and form ideal, one of the best ever shown; 2nd, another of great beauty and value; 3rd, close up, grandly placed; 4th, beautiful and of extra color; 5th, another of rare quality.

Buff Plymouth Rocks.

One of the largest and finest classes seen at New York in years and grand in every class. Cocks.—1st, a great bird, sound Buff; 2nd, fine in shape and color, nice head; 3rd and others close up. Hens.—1st, rich, sound buff, good form; 2nd and 3rd, very close, nice tails and very clean; 4th and 5th, both very worthy. Cockerels.—1st, one of the best ever, won a ribbon at this show, sound and grand in every section; 2nd and 3rd, both grand specimens; 4th, fine in size and form, nice head. Pullets.—1st, 2nd and 3rd, all three beauties of the best of color and shape; 4th, close up, a dandy pullet. Pens.—1st, a pen of wonderful quality, the male and female in perfect harmony of color, size excellent, male a corking good one and very similar to 1st prize cockerel.

Partridge Plymouth Rocks.

A strong class with birds of exceptional quality winning. Cocks.—1st, a very rich bird of shape and quality; 2nd, very close up, fine color and markings; 3rd and 4th, well placed sound birds, grand type; 5th, a winner of note. Hens.—1st, the equal of any in shape and markings; 2nd and 3rd, fine specimens of quality; 4th and 5th, good hens with merit. Cockerels.—1st, a rich specimen in fine condition; 2nd and 3rd, well shown birds of rare worth, plenty of other good ones. Pullets.—1st, in markings very choice and nice style and shape; 2nd, another of the best; 3rd, a pullet of quality. Pens.—1st, a wonder in quality and mating. (old birds)—Cock.—Ideal in shape, even, rich color and superb markings, the four hens alike in markings and shape, a beauty pen; 2nd, young birds and a pen of unusual worth, male and female of the best and even quality; 3rd, 4th and 5th, all pens of quality, shape a feature.

Silver Penciled Plymouth Rocks.

A small class of great quality with the males, both cocks and cockerels of particular worth. First pen a grand mating.

Columbian Plymouth Rocks.

Not as large a class as usual, quality very even and extra good. First cock grand in type and markings, as was also first hen. Cockerels, a rich lot. Pullets, the best clan of the lot, first the equal of any seen.

White Wyandottes.

Here was a great class of 166 birds, beautiful in shape, color, quality and condition, with a mention of any kind a mark of special merit. A royal battle between the giants of the fancy. Cocks.—1st, in style and finish one of the most valued winners here in years, grand head, eye, etc., a typical Wyandotte and in wonderful condition; 2nd, a bird of rare beauty and value, shows the best of character; 3rd, very similar and great bird of quality; 4th and 5th, both royal good ones. Other strong birds seen in this class. Hens.—1st, strong, and a feature hen grandly shown; 2nd, close up, nice head and condition; 3rd, one of the best, nice size

STANDARD LINE BRED S. C. W. LEGHORNS EXCLUSIVELY

Chicago Show, 1914 Easling Wins

In the largest class at the show, ALL SPECIALS, SILVER CUP for best display and TEN regular FIRST, SECOND, THIRD and FOURTH PRIZES on my entry of fifteen birds.

My New Policy Is a Winner

UNDER my new policy the cream of the place will be confined to only six pens. Over half of the birds in these pens are actual winners at Chicago and Louisville.

A uniform price will be charged for eggs and chicks from Exhibition matings, which is less than a third of the price formerly asked.

Before you buy get my 1914 policy of doing business. It tells you how I can afford to do this and why you cannot afford to purchase elsewhere. It will greatly interest anyone who breeds White Leghorns, and you will miss something if you don't send me your name and address. **Do So Now.**

1st Prize Cockerel, Chicago, 1914

Have You Ever Heard of Parkside Poultry Farm?

Parkside Farm is not a rich man's hobby. It is a place where prize winners are bred, hatched, raised and sold to people who cannot raise such birds.

I have won more prizes at **Chicago** in the last seven years than all my competitors combined, and my policy of breeding and raising the birds I show meets with the universal approval of all the intelligent breeders who come to me for stock of a quality that will reproduce themselves in natural pure white color, and the very best of type, shape and head points. I have furnished winners for every show of any note, and my stock is better this year than ever before. I have plenty of stock for sale and incubator eggs in 100 to 1,000 lots.

My Catalogue is Free.

THE PARKSIDE POULTRY FARM

N. P. Easling, Prop. - Box 40 - Pekin, Illinois

and head; 4th and 5th, both up close, a good pair to bank on. Cockerels.—1st, a top-notcher, one who reaches all the high spots in quality, a most beautiful breast and back, and a real winner; 2nd, a good bird; 3rd, very fine, we liked him very much; 4th, similar, a true Wyandotte; 5th, one of rare quality and extra fine finish, Nos. 461, 479 and 481 all fine birds of quality. Pens.—1st, a pen of master finish and mating, male most desirable, females alike in every section and of grandest quality; 2nd, another of superior quality and mating, with a wonder male; 3rd, condition most excellent and quality very fine; 4th and 5th and other pens very good.

Silver Laced Wyandottes.

A large class of superior quality was out to meet the judge, Dr. A. T. Beckett, and he did a splendid job. He knows and loves this variety and is one of their old-time champions. The winners were an even lot, well shown, and of fine quality.

Partridge Wyandottes.

This year an unusually large and strong class with sound, even color and choice markings the feature. The quality of heads and the general shape of this variety is beyond expectations. Cocks.—1st, a noble bird, with grand head and comb, a character of its line; 2nd, up close, a bird of nice finish; 3rd, 4th and 5th, all strong in quality, insuring the best of competition. Hens.—1st, a favorite winner and a beauty hen; 2nd, not at her best condition; 3rd and other winners alike, grand birds. Cockerels.—1st, rather small, but of fine quality, ideal head; 2nd, well marked and color excellent; 3rd, quite similar to 1st, a dandy bird. Pullets.—1st, a hummer in markings and color, type very fine; 2nd, not at her best, past; 3rd, a bird of promise; 4th and 5th, young, but comers. Pens.—1st, shape of male, wing and head, extra, females even, combs alike, shape fine; 2nd, a dandy mating back of male perfection; 3rd, a pen of mating, grand shape and workings.

Buff Wyandottes.

This was indeed a beauty class. Buff in its best quality here, and birds of wonderful shape and nice heads. Cocks a grand, strong lot all through. Hens unusually good, a noble class. Cockerels one of the best classes out to date, nice form and heads, with even, rich color noticeable. Pullets, one of the best class, 1st and 2nd very superior. Pens, a grand collection of eight pens, very evenly made.

Columbian Wyandottes.

A grand class of nearly 100 birds shown in superior quality. This variety is showing annual improvement good to see. They deserve all possible popularity. The breeders are to be commended on the types they are breeding and showing. Cocks.—1st, a noble winner, fed on "Good Food"; 2nd, grand in color and markings; 3rd, good head and a good bird. Hens.—1st, a bird of grand character; 2nd, very close, a warm one, nice type; 3rd and others of value. Cockerels.—1st, a beauty, fine markings, good head, etc.; 2nd, very good; other winners and others fine birds, shape very good. Pullets, a charming lot in all ways. Pens, as a rule, a choice lot, grandly mated.

Silver Penciled Wyandottes, Etc.

One of the very best classes seen to date. Besides their beautiful color and markings they have shape of a high degree. Black Wyandottes, an even class with good competition; Barred Wyandottes, a nice class with two grand breeders showing. They are in good hands and are being bred to shape and markings.

S. C. Rhode Island Reds.

A wonder class from first to last, with 203 birds competing. The class was teeming with quality, in color and shape, with finish and markings very desirable. The birds were from every section and most likely the best to be had. Cock.—First, a grand and noble bird, very even in rich color and good markings; 2nd, an old winner of undoubted quality; 3rd and 4th, a fine pair that show well; fifth, rather similar to 3rd; No. 745, another beauty with much to recommend; Hens.—1st, even, rich color and beautiful under, good wings and nice head, a bird of highest qual-

J. F. SIEMS, Patentee

Over 600,000 People Have Tested My Great Hatcher!

They know from experience that in simplicity, ease of management and certainty of results, no incubator in the world equals it. The actual, living hens control everything. It's the incubator that can't make mistakes—and you can't make mistakes in operating it.

As Proof Read the Following:

"Your Incubator speaks for itself. I got 507 chicks from 540 untested eggs."—*G. E. Bengtson, Falun, Kansas.*
"It beats them all."—*Edgar Douglas, Wellsville, Mo.*
"All you claim for it."—*W. H. Murrill, New Albany, Ind.*
"No Bother, No Worry."—*Mrs. A. B. Gorton, Coffeyville, Kans.*
"Worthy of all the praise."—*E. Dunston, Winona, Miss.*
"The greatest success of the age."—*W. Walker, Linden Heights, Ohio.*
"I hatched 225 chicks from 240 eggs."—*B. A. Barton, Grandburg, Texas.*

NATURAL HEN INCUBATOR 200 Egg Size Costs Only **$3**

Artificial incubators cost four times this amount and do not give half such satisfactory results. Remember the Government is behind my machine—fully covered by patents. No freight to pay. Agents Wanted. Send today for our FREE Catalog with Special Introductory Offer and make success sure.

NATURAL HEN INCUBATOR CO., 1349 Constance St., Dept. 4, Los Angeles, Cal.

The Incubator You Will "Stand By"

You want an Incubator that you can "Bank on" **always;** one that will Hatch a chick from every hatchable egg—one that does it every time you set it—year in and year out; month after month; in all climates.

You want an Incubator that hatches strong, vigorous chicks that live and thrive and win in the show room, breed in the breeding pen, and lay in the laying pen. Vigor and strength in the chicks are what tell the tale of superiority in laying, breeding, winning.

The "Essex-Model"

is always Reliable—always Trustworthy—always Steadfast. Experiment Stations say so; Beginners say so; Experts say so; Women Poultry Keepers say so; and the Unequalled Record Hatches it has made prove that it is so.

100 Chicks from 100 Eggs—100% Hatches

have been made by the Essex-Model **in 8 Different States.** This is a Record Unequalled by any other Incubator. When you buy an "Essex-Model" you save money and get satisfaction that lasts. Get "Bob" Essex' Free Catalogue, and read about our "Standard" and "Middle-Price" machines at prices and in sizes to suit everybody. See the "Baby" Mammoth 800-Egg up to 10,000 eggs or more.

ity; 2nd, another hot one, well shown; 3rd, a beauty but hardly at her best as seen here, shape elegant and color rich; 4th, a corking good one, we thought, and one of the best; 5th, should make a great breeder. Cockerels.—1st, a very good, even bird; 2nd, fine and well finished, grand tail and wings; 3rd, a wonder but past his best form here, will make a great cock, and we think a breeder; 4th, another of the best in every quality; 5th, past his best form; Nos. 823, 825 and 809 all very fine birds of merit. Pullets.—1st, very sweet, wonder in color and shown well; 2nd, close up, a great pair; 3rd, the kind that is always good and dependable; 4th, a pullet of rare promise, real nice; 5th, a good bird; Nos. 849, 859, 865 and 869 from the outside looked good. Pens.—1st, a pen of even size, quality and color, a good winner; 2nd, a very close pen, male a beauty and females well matched; 3rd, 4th and 5th made a dandy trio of high merit with but little to choose from.

Rose Comb Reds.

In these a class of 140 birds were seen, with the great big majority of them seen at their best condition. It is a question when and where a class to equal this has been shown. Cocks.—1st, a grand bird of exquisite color and form, very even, nice head and good wing, should make a great breeder; 2nd, fine in shape and color and well finished; 3rd, another high class cock; 4th, a good, strong bird; 5th, full of character; Nos. 889 and 893 dandy cocks; hens, 1st and 2nd, two of a kind and that kind the rarest and finest; 3rd, a great hen in color, nice head, carries well; 4th and 5th, both strong hens of quality. Cockerels.—1st, a dandy rich fellow in color and grand in type, very good head, a valuable bird; 2nd, grand in form and every quality; 3rd, no doubt one of the best and well shown; 4th, a royal good one, nice head; 5th, good and strong; Nos. 917, 923, 925 and 929 beautiful birds of rare quality. Pullets.—1st, a gem, fine form and great color; 2nd, a close one of highest quality; 3rd, very nice; 4th, a beauty, but a mite unfinished, grand color; 5th, very good; Nos. 961 and 963 beauties. Pens.—1st, very classy in mating, shape and color, wings and tails beautiful, and all good heads, a very strong male, sound in every way; 2nd, well and evenly matched, good heads and grand tails and wings; 3rd and 4th, both extra fine mated pens of rare quality; 5th, very even quality, a grand lot of winners.

Brahmas.

Light.—A grand class of 60 birds, most all in excellent condition. Cock.—1st, a bird of grand station and style, good markings; 2nd, close up; 3rd, grand markings. Hens.—1st, beauty in size and shape; 2nd, a very fine hen of every quality; 3rd, another beauty, great color. Cockerels.—1st and 2nd, birds of fine quality, they stand well; 3rd, also a strong bird of quality. Pullets.—The three winners in a close class. Pens.—1st, here was one of the best males we have seen in many years, beautiful type and grand color and markings, others good.

Dark Brahmas were small classes with three Firsts going to Mr. Clem Watson, of England.

Cochins.

Buff.—The best quality class seen here for years, with the winners of grandest quality in shape and color.

Partridge.—Also a large and beauty class, full of quality. The markings on several specimens were simply wonderful.

White and Black.—Very small classes.

Langshans.

The Blacks were a good sized class of extra quality and worth. All winners of exceptional quality. First cockerel a hummer, with second very close up; color and shape the features. Also first hen and pullet grand birds, shape ideal. Pen.—1st, a beauty in mating, the best of quality in all and all alike.

White Langshans.—Small classes.

S. C. White Leghorns.

This was one of the greatest classes at the show with 204 birds competing, and representing the yards of several of our best known breeders, making competition very strong and assuring highest quality in all classes. Cocks.—1st, worthy to wear the crown, a bird of wonderful type and carriage, fine head, full tail and absolutely white, shape of body, length of saddle and general finish all we could desire; 2nd, close up and a wonder in all that goes to make a champion; 3rd, a dandy bird and a great Leghorn in every way, showing the best of line breeding, very fine head, good finish; 4th, very similar

"O.K." Poultry Litter

TRADE MARK

is cheaper to use and ever so much better than Straw, Clover, Alfalfa, Sawdust, Shavings or anything ever thought of for litter.

"O. K." KEEPS THE BROODER CLEAN DRY SWEET

WITHOUT ONCE CLEANING OUT

Imagine the comfort, convenience and time saved running your brooders like this. Remember, one lot of "O. K." Litter lasts until the chicks have outgrown the brooder without once cleaning out. In COOPS, LAYING HOUSES, COLONY HOUSES and SCRATCHING PENS, "O. K." Litter dries up the droppings so that the house is always dry, clean, sweet-smelling and sanitary, and needs cleaning out only once in three or four months.

Tell us how large your house is—we will tell you how much "O. K." Litter you need. Write today for

We will furnish twenty-four (24) of the best standard varieties. Catalogue free.

M. UHL & CO. - NEW WASHINGTON, OHIO

to third and a grand, good Leghorn; 5th, not at his very best at this time but one of the very best in type and general quality. Hens.—1st, a very good hen with nice size and form; 2nd, a beautiful head, grand type and excellent finish; 3rd, very similar to first, full tail, etc.; 4th, another dandy, she looked very sweet to us. Cockerels.—1st, a model, the best male ever shown, besides winning first prize this wonder wins the A. P. A. gold special for best Cockerel in the show which five judges placed, an honor never better placed or won. Ideal in form and carriage, a most beautiful head, comb, etc., a true model, the achievement of the age; 2nd, another wonder, typical and of grandest quality, fine back and excellent finish with dandy head; 3rd, another close up and a wonderfully fine one. It is hard to even imagine three cockerels of this quality in a class; 4th and 5th were also right up there demanding and receiving proper recognition. Pullets.—1st, a beauty pullet, seen at her best, fine style and condition, grand tail and fine head; 2nd, a good bird; 3rd, very neat, nice head and good type; 4th, a dream in shape, color and condition; 5th, also a beauty pullet. Pens.—In general quality and mating supreme. Male looks like first prize winner, with finish most excellent; females an even lot of grandest type and wonderful mating, all just alike in heads, tails, etc., and absolutely white; 2nd, a pen of highest quality, well shown and beautiful mating, male with extra fine points, long back, broad and full with grand saddle and tail, and all females of finest quality; 3rd, a very nice pen, well shown and of even quality; 4th, a real beauty pen, grand in every bird, fine heads and tails, a great pen of worth; 5th, another of exceptional quality and a most desirable pen, fine in finish.

S. C. Brown Leghorns.

It was delightful to see this class of S. C. Brown Leghorns, with its 80 birds, representing the best from coast to coast, as even far-off California was here represented. This class was a credit to the breeders and we hope for more like them. Cock.—1st, a grand Leghorn of rich color and markings, good head and fine style; 2nd, a strong bird, well set, grand hackle and saddle and fine size and type; 3rd, also very nice, rich color; 4th, typical and rich color and markings; 5th, not shown at his best condition, a grand bird. Hens.—1st, one of the best that has won here, very fine color and markings and excellent type; 2nd and 3rd, even up, both dandy; 4th, very good in typical quality; 5th, similar, a sweet hen. Cockerels.—First, a wonder, a model in form, striping of hackle and saddle beautiful, even, rich color, fine tail grandly carried, and beauty head; 2nd and 3rd, close up and a wonderful trio; 4th, very neat, a bird of unlimited promise; 5th, also a rare one; No. 1289 and several others very fine. Pullets.—1st, a very neat pullet of fine back, breast, etc.; 2nd, no doubt one of the very highest grade, shows well; 3rd, and other winners very fine. Pens.—1st, a beauty collection of grand quality and mating; 2nd and 3rd, also of best quality. Others nice, a dandy lot.

S. C. Buff Leghorns.

A class of 95 birds, recommended for evenness and general high quality. Cock.—1st, a grand bird in color and shape, extra tail; 2nd, very good, a grand Leghorn; 3rd, a corker, quality, color, good head, etc. Hens.—1st and 2nd of highest quality, nice type, even color; 3rd, a beauty in color, fine tail, stands well; others of quality here. Cockerels.—1st, a grand buff bird, well deserves to win; 2nd, close up in every quality; 3rd, well shown, with nice points. Pullets.—A great lot. 1st, 2nd and 3rd in a close class and race, all very fine; 4th and 5th both beauties of exceptional quality. Pens.—1st, a beauty collection, well mated and select quality; 2nd, dandy colored male and fine females; 3rd, select lot of quality and breeding worth; 4th, grand birds, all of them; 5th, very fine pen.

Other Varieties of Leghorns.

S. C. Blacks.—An unusually fine lot. Color grand, and size and shape very good. The first cockerel and pullet the gem of the class.

Silver Leghorns.—A rather small class.

Rose Comb Whites.—A good size class, of beauty quality. Heads a feature next to size and condition. 1st, a cock of beauty and a very rare specimen. First cockerel grandly shown, a dandy winner. All the winning females of high grade.

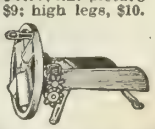
The 3 GREAT EGG MAKERS

THAT PAY FOR THEMSELVES IN A YEAR.

CROWN BONE CUTTER $6.50

Has hardened steel knives. Price, like picture, $8.50; for bolting to table, $6.50. For larger sizes see our Book



Unless fed plenty of FRESHLY CUT GREEN BONE, with the meat and grissle still sticking to the bones as you get them sweet from the butcher, and CUT CLOVER, hens can't lay as many eggs as they should. The bone must be freshly cut or it's tainted, and spoils the eggs, and often poisons hens. Clover must be cut into short lengths, or most of it is wasted, and what is eaten is fibry and often clogs the crop. If you don't give hens lots of ground SHELL and GRIT they can't digest properly nor get out of food what they must have to make eggs.

Don't depend on buying cut bone because you can't get it fresh, and dry bone and meat scrap are poor substitutes. The only satisfactory and profitable way is to own these three splendid machines. They 're not expensive, are easy running, not complicated, and built to last a life-time.

GEM CLOVER CUTTER $9

Cuts green or dry clover even and easy. Screw feed & adjustable cutter bar. Blades always square to bar. Price, like picture $9; high legs, $10.

WILSON BROS. BONE CUTTERS, CLOVER CUTTERS & GRINDING MILLS

GRINDING MILL $5

Best hand mill for grinding easily, quickly, Dry Bones, Shells, Grit, Charcoal, Corn, Wheat, etc. Price with Stand, $7; like picture $5. Larger sizes, hand and power.

WRITE FOR FREE BOOK

DON'T KEEP HENS UNLESS YOU CAN OWN THESE MACHINES

They won't pay you well enough for eggs or table. Keep a record of results and you 'll soon prove that these machines will pay for themselves in a year.

Handled by nearly all dealers and hardware stores, or shipped direct. Write for our prices on all sizes—hand and power.

Do your neighbor's cutting and make money. We also make the CORNING FEED MIXER, the best mash and grain mixer in the World. Every Wilson machine is absolutely guaranteed. Write to-day for FREE BOOK & Price List.

WILSON BROS. DEPT. F 25 EASTON, PA.

Rose Comb Brown Leghorns.—A great class of 50 birds, full of best quality, extra in color and markings. The three winning cocks hard to beat. Hens a royal lot, very even. Cockerels also of the best in color, size and type. Pullets show every quality, heads a feature. The two pens seen were of the best; first of rarest quality.

Rose Comb Buffs.—A large class, showing good color, type, etc.

S. C. Black Minorcas.

One of the largest and best classes seen here in years. Quality was sizzling in every department. Size, shape and color was of highest and rarest kind. Cocks.—1st, a royal fine one of form, good head and color, nice carriage; 2nd, a beauty head, well finished and a wonder in color; 3rd, stands well and strong, good body; others all strong. Hens.—1st, one of the best, grand type, nice head; 2nd, close up, finished, great color; 3rd, and several most worthy. Cockerels—1st, a noble bird of size, shape and color, fine head, sound in every way, extra fine back; 2nd, very close in every quality and a beauty bird, with great breeding quality; 3rd, large and strong, well shown; 4th, one of the best of the lot; 5th, and others very good, color grand. Pullets.—Both 1st and 2nd stand out strong in quality, shape fine, and color sound, grand heads; 3rd, another beauty of merit, well carried; several others of extra fine quality here. Pens.—1st, a beauty lot grandly mated, male a hummer, females grandly mated; 2nd, a charming male and beauty females, one here the equal of any at the show; 3rd, good character all through; 4th, extra fine color, nice size; 5th, a wonder male, females not evenly matched. Oh, what a male!

Rose Comb Blacks.—A good sized class with fine quality.

Whites of both combs, small classes.

W. F. Black Spanish.

One of the finest classes ever seen at any show, both in numbers and quality. A desirable lot of fine birds.

Andalusians.

A charming lot of birds of fine color, sound and dependable. Style and carriage of the best.

S. C. Anconas.

Here again one of the best and largest classes ever seen at any show, with general quality and conditions of the best; 114 birds. Cocks.—1st, grand in color and shape; 2nd, in style and shape a beauty, good head; 3rd, a bird of great quality and color; 4th and 5th, up close all the way. Hens.—1st and 2nd, two of the best we have seen, nice form, well carried; 3rd, 4th and 5th, birds of quality, very nice, and a lot of other good ones. Cockerels.—1st, a great winner with every quality desired; 2nd and 3rd, very similar, both strong quality, birds with nice points; 4th, good; 5th, a very rare one, great color. Pullets.—A great collection; 1st, a beauty, select color and markings; 2nd and 3rd, grand good ones. Pens.—1st, a great selection of quality; 2nd, very even, good and sound birds; 3rd, a good male and good pen.

R. C. Anconas.

An unusually large class and general quality and condition; nearly up to the Single Combs. The winners, without exception; a fine lot were shown. First cockerel a hummer.

Silver Gray Dorkings.

A good size class of splendid birds. Every department well filled with birds we can commend. More power to the breeders. Come on and help boost the great and valued rarity you represent. There is an opportunity with Dorkings.

Sussex.

Also a good-sized class of these, with English birds competing.

S. C. Buff Orpingtons.

Breeders, we congratulate you, winners and losers alike. It was a wonder class of 186 birds, with the winners a very select lot. Take them out and there was plenty of quality to grace any show. Cock.—1st, a strong, noble, sound buff bird of superior quality and fine shape, grand back and tail, fine head and carried well; 2nd, sound color and of grand shape, nice head, a beauty tail; 3rd, up close, of grandest quality, breeding worth in all these; 4th, great color, and strong; 5th, fine shape and sound color. Hens.—1st, beautiful, even, sound buff, grand tail, fine back; 2nd, very similar and a great pair of birds; 3rd, even, and a beauty; 4th, very fine, a desirable female; 5th, one of the best, a beauty in form, good head. Cockerels.—1st, typical, grandly carried and sound in every way, fine front and back, good tail; 2nd, a dandy of superior qualities, fine head, a sound bird in every way; 3rd, another beauty with heavy bones, deep, fine breast and great back and tail; both 4th and 5th all we could desire. Pullets.—1st, evenness a feature with shape, back a wonder, fine head; 2nd, also a beauty, splendid in all ways; 3rd, a charmer, sound and neat; 4th, full of quality, carried well; 5th, a pleasing pullet, sound and neat; 4th, full of quality, carried well; 5th, a pleasing pullet, very strong in character. Pens.—1st, a wonder in perfect buff color, evenness and mating, the females alike in color and form make a beauty, a great pen of the unusual kind; 2nd, also a beauty of superior, even quality; 3rd, a very hot

MOE'S NEVER FAIL TRAP NEST

DELICATE TRIGGER HOLDING TRAP RELEASED BY HENS ENTRANCE FALLING SILENTLY

(Patent Pending)

A solution of all trap nest troubles—for, as the name implies, it never fails.

Lice-proof, fully sealed back and sides, but affording plenty of air when the hen is trapped. Can be placed anywhere in the poultry house. The trap is easily removed, so that the nest can be used as an ordinary one. Set up and ready for use when shipped.

No. 33, 12x12x14½ inches, complete 75c
No. 34, 14 in. square, complete $1

TRIGGER LOCKS TRAP AND HEN THEN THERE TO STAY UNTIL RELEASED

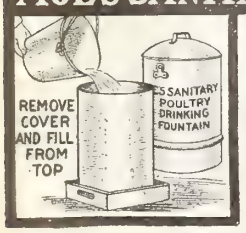
MOE'S SELF LOCKING LEG BAND

MOE'S SELF LOCKING BAND READY TO BE USED

(Patented)

You simply push it together to lock it and it can only be removed by destroying the band. A sealed band that requires no sealer.

Every band has its own raised or embossed number.



12 Bands, any size 15c

Liberal Discount on Quantities

EASILY ADJUSTED WITH THE FINGERS AND IT IS THEN ON TO STAY

MOE'S SANITARY POULTRY DRINKING FOUNTAIN

(Patent)

The most popular fountain on the market. Fills from the top.

Dead air space keeps water cool in summer and from freezing in winter. Drinking pan now made square, which does away with spilling when hung up. Can be used for two pens at the same time. Prevents chickens from getting their wattles wet and freezing in the cold weather. Manufactured in three sizes:

No. 1, 1-gallon capacity - $1.25
No. 2, 2-gallon capacity - $1.75
No. 3, 3-gallon capacity - $2.25

REPLACE COVER AND YOU HAVE A CONTINUOUS SUPPLY OF PURE WATER

Also specially constructed for ducks and pigeons.

These Are a Few of the Good Things in MOE'S LINE.

OTIS & MOE, 2011 Otis Bldg., CHICAGO, U. S. A.

one, well mated and beauty quality; 4th, up to every quality; 5th, similar, a grandly shown pen, one of the best pens here carelessly shown.

S. C. Black Orpingtons.

The great and beauty class of the show. Never before has one like it been seen, and we doubt if it can ever be duplicated. The birds, as a rule, in wonderful condition, and seen at their best in both type and color. Cock.—1st, just right, stands well and strong, fine head, with a wonderful body, beauty back and tail, broad and full, breast ideal, probably better, color glorious; 2nd, only a shade behind, beautifully finished, a close one; 3rd, very neat, of dandy quality; 4th, the type of the second, a hummer; 5th, another beauty with a strong lot unmentioned. Hens.—With but very little to choose between 1st, 2nd and 3rd, models in form and of best possible color; many other charmers here. Cockerels, 1st, finished to the minute, one of the very rarest in color and type, fine head, etc.; 2nd, a very good one, stands well and is finished; 3rd, reliable in every quality, stands strong and clean, and a sound Orpington; 4th, very similar and worthy; 5th, he looked like a great winner to us. Pullets.—We have never seen a better, elegantly shown; 2nd, worthy of highest award at any show; 3rd, another—well, all five were just right, with the best type and richest of sound color. Pens.—1st, a beauty pen, well put up; class in every bird; 2nd, grand male and four even, fine females; 3rd, a very strong pen, nice in shape and heads; 4th, way up in best quality; 5th, very neat. This whole class with 135 birds was a stunner, and here, too, we congratulate the breeders.

S. C. White Orpingtons.

We will feel thankful if we can get through this class without having to coin several new words, for with 125 birds in line shown by great breeders, it was a battle royal for honors. Cock.—1st, grand in type, sound in color and great in finish and condition; 2nd, a beauty and one of the best, grand shape; 3rd and 4th, showing same lines and both dandy fellows; 5th, a magnificent cock, back and tail superb, finish extra, several other fine cocks in line but there were but five awards to place. Hens.—1st, a very choice bird, fine back and stands well, grand head; 2nd, also one of the best and very close, well shown; 3rd, very beautiful; 4th, also one of the best and very close, well shown; 3rd, very beautiful; 4th, also nice; 5th, shape and condition hard to beat. Cockerels.—1st, grand in every quality, head extra; 2nd, very close and an excellent bird; 3rd, similar, of rarest type; 4th, a very neat one; 5th, strong and hardy with grand quality. Pullets.—1st, in shape and carriage, a most charming pullet, color of the best possible; 2nd, a pullet of grand finish, grand type and fine head; 3rd, one hard to beat in any company; 4th, very near the same, is worth all a man can ask; 5th, good Orpington. Pens.—1st, a wonder pen in quality and mating, conditions of the best and all typical birds; 2nd, finely mated and very rare quality; 3rd, and others of value.

S. C. Blue Orpingtons.

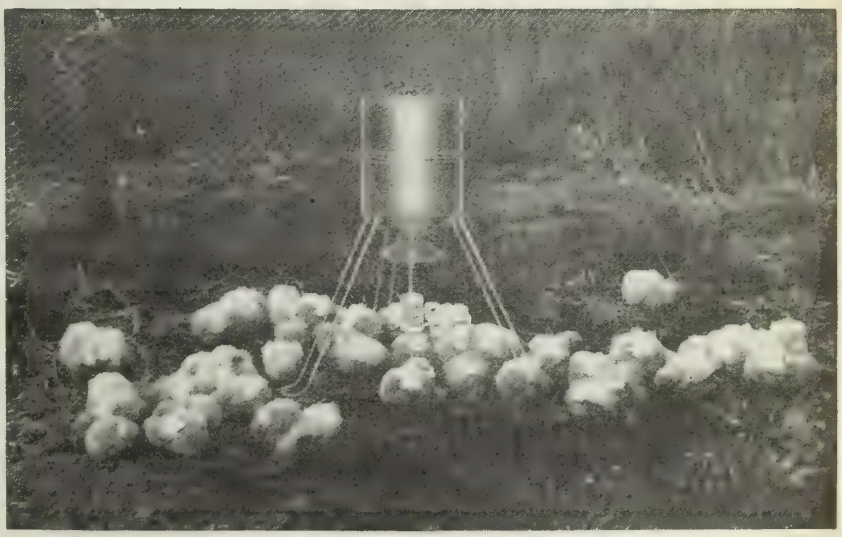
That the Blue Orpingtons are gaining in favor was evident here in this great beauty class of 104 birds. They were shown in wonderful type, grand color and excellent condition. Cocks.—1st, a bird of grand form and sound color; 2nd, nice quality, extra shape; 3rd, large and strong, a bird of worth; 4th, very good, rich color and fine qualities; 5th, no doubt a grand breeder. Hens.—1st, the best to date and no doubt for some time to come, grand size and type; 2nd, fine color and an unusually fine bird; 3rd, very neat, nice color; 4th, plenty of type and color; 5th, very good. Cockerels—1st a grand bird of beautiful quality; 2nd, very close up and full of promise; 3rd, rich colored, a strong bird; 4th, full of quality; 5th, similar, very good. Pullets.—1st, a beauty, fine color, well edged and grand type; 2nd, very sweet and well shown; 3rd, very strong and rich, a bird of value; 4th, very, very good, real type; 5th, no doubt one of the best. Pens.—1st, well mated and good color; 2nd, even and rich in color, a beauty male; 3rd, good quality in all; 4th, color excellent; 5th, close up, a nice pen.

Houdans.

A very nice class and more than we expected at this time with meetings at Boston. Quality was very even and very good. We want to see these coming right along for we are strong for Houdans.

Silver Campines.

This class was a whole show in itself with 139 birds shown. The breeders are doing fine and the Campines improving and increasing in popular favor. Cock.—1st, one of the best ever seen, extra nice size and shape; 2nd, grand in type and markings; 3rd, very fine and a real beauty; 4th, one of the very best, grand color, head, etc.; 5th, fine. Hens.—1st, you have to see her to appreciate her, just right; 2nd, also a



Don't Starve Those Chicks

and Don't Overfeed Them

ONE EXTREME IS AS BAD AS THE OTHER

The greatest of all "chick problems" is trying to feed the little ones correctly. Your season's success depends upon rearing them into big, strong, healthy birds—the kind that can go forth and command a good price for you. There is but "one and only one" solution to this feeding problem—and that's to use a

Simplicity Kant-Klog Baby Chick Feeder

This feeder will feed your chicks just as they need it—automatically, without thought or trouble on your part. It will make them grow and develop quickly, turning them into strong, healthy birds. A little chick's crop does not hold very much and is soon empty. You can not be there all the time to feed them, yet they must eat often and this feeder solves the problem. With this feeder no grain is left lying around to become filthy and foul and then eaten, causing gases, bowel trouble and other sickness. In plain words it is simply perfect and perfectly simple. Holds about a quart of feed, stands on three wire legs and it is guaranteed.

wonder and close up; 3rd, very bright, very nice. Cockerels.—1st, a beauty from every viewpoint; 2nd, a corking good one, head and color fine; 3rd and 4th great winners at any show; 5th, also a very worthy bird, No. 2309 a beauty. Pullets.—1st, grand and good; 2nd, very fine markings; 3rd, superior quality in shape and color; others grand. Pens.—1st, a grand winner, real quality pen; 2nd, very fine, well mated; 3rd, of a very high, even quality; 4th, grand size and shape; 5th, worthy in every way.

Golden Campines.

A beauty class of 56 birds, all well shown. Cock.—1st, one of the finest and rarest in type and markings; 2nd, very strong in quality; 3rd, close up, nice quality, head, etc; others also good. Hens—1st, a beauty of rarest quality; 2nd and 3rd, both grand birds. Cockerels.—1st and 2nd, a study of beauty and worth; 3rd and 4th, both grand quality birds. Pullets.—1st, full of class, nice type; 2nd, extra fine; 3rd, and others beautiful specimens. Pens.—1st, grand in mating and quality; 2nd, very hot, fine birds; 3rd, a good collection.

Dark Cornish.

We look with extra favor on these, a fine collection of 65 birds shown. Cock.—1st, a great winner and rare bird; 2nd, a noted winner, fine type; 3rd, a husky fellow, good markings; 4th and 5th, both strong birds. Hens, 1st, a choice specimen; 2nd, grand form; 3rd, every good quality and others very good. Cockerel—1st, a most pleasing bird, rare type and color, grand station; 2nd, extra nice; 3rd, very strong and well set; 4th, strong and full shape. Pullets.—A grand lot; 1st, great color and markings, fine shape; 2nd, very nice type; 3rd, one of the beauties; 4th, a hummer in form and lacing. Pens.—1st, a rare pen of best quality; strong in shape; 2nd, close up in all quality; 3rd, well shown and fine birds.

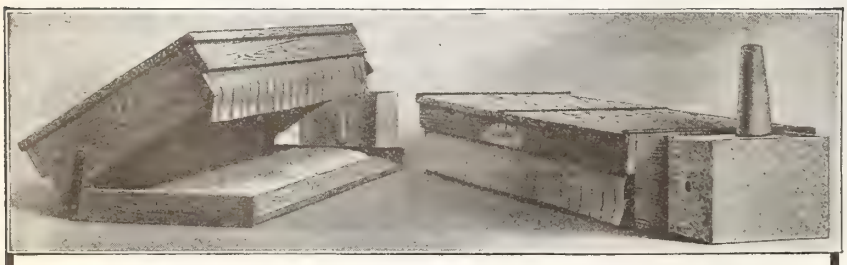
PROTECTING THE WATER TROUGH.

The accompanying illustration shows the method of a California poultry raiser for keeping the water in the

A board cover keeps the water clean and cool.

poultry troughs fresh. The system also serves to keep the water clean.

An ordinary triangular trough is used and the water is run into this from a faucet which is allowed to drip constantly during the day. A board with a hole, through which the water may drip, is laid across the triangular trough in such a way that the fowls may get at the water easily but may not get into it or may not sit upon the edge of the trough.



This also has a tendency to keep birds from the water. Very often sparrows bring disease to the flock by getting into the watering trough.

Close-To-Nature OPEN AIR Hovers
THE LONGEST PORTABLE HOVERS NOW ADVERTISED
Five feet long, warmed evenly by heater on inductive principle. Applies the three Close-To-Nature principles:
CONTACT WARMTH, like the hen.
OPEN AIR VENTILATION, not hot air.
NON-PILING OR OVERCROWDING.
Combines the Fireless with the Lamp—use the lamp for very young chicks and discard it as they grow older; or use lamp during daytime but extinguish it when chicks cluster for the night. Hinged for easy cleaning out and airing. Roosting bed of earth or litter, perfectly sanitary. Nothing like these hovers now on the market. Brooders on same principles as hovers. Don't get a brooder or hover till you have read the Close-To-Nature circular. Very low prices.
CLOSE-TO-NATURE CO., 38 Front St., COLFAX, IOWA

Mr. J. W. Andrews, of Dighton, Mass., holds a record for White Wyandotte winnings that has never been equalled. At the Boston show, which is regarded by many as the best and strongest class of White Wyandottes every year, Mr. Andrews has won first pen for six out of seven years; first cockerel for three successive years and second cockerel for four successive years. Cockerel and pen winnings in any variety are usually regarded by breeders as indicating the strength of any flock. With this as standard, then Mr. Andrews' White Wyandottes are of Triple A quality.—Louis Paul Graham.

"RINGLET" BARRED PLYMOUTH ROCKS.

A Visit to the Home of E. B. Thompson, Amenia, N. Y., His Late and Greatest New York Victory. Results of 35 Years' Labor. Matings for 1914.

(WRITTEN BY H. P. SCHWAB, EASTERN REPRESENTATIVE A. P. J.)

For nearly fifty years the Barred Plymouth Rocks have been popular favorites and their history is one of unusual success. Year by year the breeders have improved their value, both as fancy and practical fowls, and are truly today superior in general worth to any other stage in their existence. While they were ever good, we feel we are within the bounds of truth in stating that during the past ten years the greatest improvements have been made and that the breeders of this age have done more and achieved greater results than have those of any other time.

It has been our custom to yearly visit the great breeders and to note the lines as they yearly are and at all have found positive evidence of progress, their ideals are high and their accomplishments great which assures still greater progress for the future.

We lately spent a day with Mr. E. B. Thompson to again view his wonderful line of "Ringlets," which has played so important a part in the progress of Barred Plymouth Rocks for upwards of thirty-five years and forms beyond question the largest and brightest pages of their entire history, one of which every breeder and lover of the variety can point to with pride, for Mr. Thompson has ever been their faithful champion and richly deserves credit for what he has done.

At the late Madison Square Garden, New York show, this season of 1913-14 Mr. Thompson won his greatest and most substantial victory, in a great class of wonder quality. Last year the season of 1912-13, he made an unequalled record and so on back for thirty-five years he has been a most consistent exhibitor and has made a total record for exhibits made and prizes won that is conclusive proof of what his line is today as well as what it ever has been from the very beginning.

At this latest and greatest of all New York shows, Mr. Thompson won cocks first and fourth, cockerels first and second, third, fourth and fifth; pullet, fifth; pens, first, second and fourth; special for champion; male, color, male, shape male, best display, best collection and many others of equal value and worth, a most stupendous achievement that we did not think it possible for any one breeder to make at this show.

The winning of all five prizes on cockerels is worthy of special consideration at all times. A feat considered impossible and improbable and one liable to stand unaproached for time to come. It is the most glorious record imaginable, one only possible with similar quality of highest perfection in shape, color and barring. Years ago Mr. Thompson won all five prizes on pullets and this has stood the test of time to this day with no breeder ever approaching this record in females.

The birds seen here at his home are a revelation. They show the quality and worth that is possible to attain in Barred Rocks. They, by their similarity, show breeding worth, and that is the real foundation of this line's success. Here are today to be seen for study and comparison four New York winning first prize cockerels, three of which also won the sweepstake specials for "Champion males," and two first prize cocks. Two first prize pen cockerels and a collection of nearly thirty other males that have won prizes of honor at the great Garden Show. The grand old champions of one, three and more years ago have handed down their superior quality with the improved label on it from generation to generation and the whole line today shows the character that made those birds famous and the quality of their day.

It must be evident to the reader who has followed the facts and knows the history of Barred Rocks and its breeders, that back of all this line and their records stands the ability of Mr. E. B. Thompson as a breeder, that he has mastered the questions is shown best by his accomplishments which leave no room

for argument, he is deep in knowledge and all attained as a result of study which we may well say he has mastered completely.

The reading of the Standard, like the reading of the law can be misconstrued and construed to fit a purpose or a condition which is not right, it is to know the real intent of the standard requirements and work accordingly that brings results, and when you get the results, to know how you got them and then to work along these same lines for further improvements. In this we can find reasons for Mr. Thompson's success. He knows his birds and their breeding and he also knows what is possible and desirable and is now on the alert to attain results. Let me here add that back of this kind of breeding is a breeding value that can't be overestimated.

Cockerel Matings for 1914.

After my arrival it did not take long before we were headed for the breeding houses and found Mr. Thompson had about completed all his matings for the year. A few were still subject to change by him and he has the breeding record of every bird used stored safely in mind and a good sound reason for every bird being just where it is. In these matings we noted several features, the most prominent one being the extraordinary rare and high quality of the birds, the evenness in shape and the soundness of color, with character in quality barring. All were alike and of an even high-grade. Every bird used has its place and a purpose which is the production of a "better Barred Plymouth Rock."

In one of the first pens seen was the first New York cockerel and champion male of a year ago (1913) and a better one never lived. He is the sire of this year's champion, and he also is the son of another champion of three years ago, with his wonderful shape he still carries the bright clean color and phenomenal barring that placed him over all others when the real test came. He is a champion in fact, the victor of wonderful contest and a sire of champions. A bird whose value will never be forgotten.

Next came "Edward," the unplaced idol of every visitor at the late New York show (at which time he was not fully matured) for color and barring, brightness and general quality he is without question the best Barred Rock male I have ever seen or handled. Here in his pen finished in feather, big and strong and full of vigor he stands lording it over a pen of hens of wondrous beauty, a mating safe to bank on for the future and the like of which we have never seen.

This year's first prize and champion cockerel was next seen, and only to be admired more than ever. His form, with fine, long sweeping back, is ideal, and here, as at New York, where he made 1913-14 history, he is a finished and most beautiful specimen.

Next was "Our Favorite," a cock with a wonderful record. Three years ago he won sixth cockerel at New York. Last year he won fifth cock and this year won fourth cock, a bird always in show condition, most excellent in line, barring and one that well carries the character of this line, to improve with age. He is an exceptionally good one.

"Pilsner," the fourth prize cockerel at the late New York show, came next. He also was an idol of the breeders and visitors at the show. His extreme straight and narrow barring won all alike and no honor or place is too great for him.

The Second New York cock of last year followed a grand big fellow of rarest form and best of barring, with a most beautiful head and the same evenness all over.

The first prize pen cockerel of this season was next, and what a beauty he is. His barring surface and under are only short of phenomenal, clean-cut, bright and sharp.

Throughout this house and two others were cockerel matings all headed by Madison Square, New York winners of their line; every bird a select one, with positive quality similar to those described. Here was seen a cock that was too young to show as a cockerel last year and not in feather to exhibit as a cock this year, that we consider one of the five or six best males on the place. His contrast of color is snappy and clean, elegant shape and a near perfect comb and like him there are many more on the place unknown to the world in general for conditions have prevented them making records, but they are here admirable and worthy.

This year's first prize New York cock was also seen mated a royal good one

EGGS, CHICKS and STOCK CHEAP

RINGLET STRAIN

1st Cockerel, Shape and Color Specials, Champion

Springfield State Show, 1914

Our pens are rich in the blood of this grand bird. We have the very best values in eggs for hatching at following prices: From fine large birds of our best blood lines—$2 per 15, or $5 per 50 eggs; from pen headed by 1st ckl. at Bloomington, Ill., score 92¾ by Hyle, $2.50 per 15 straight. Will sell eggs from my 1st Springfield ckl. and his sire's pens after April 1st at $5 per 15 eggs.

ROSE AND SINGLE COMB

Winners for Years at Big Shows From Boston to Seattle

Won 1st Pen at Chicago this December; 1st Cockerel, 1st and 2nd Pullet, 3rd and 4th Pullet, 1st Hen—3rd Hen at Madison, 1914. Pens Mated. Get your stock and book your eggs early.

Mrs. Guy Blencoe :: Alma Center, Wis.

Member International Ancona Club.
Life Member A. P. A.

with perfect rings of barring and a true ringlet. Mr. Thompson adopted the "Ringlet" name years ago and has bred to it constantly.

The second New York cockerel of last year is as grand as ever. We can't think of him without mention of his wings, which are as good as we have ever seen on a male, and he has the same general qualities as Mr. Thompson's first winner of that year.

The second cockerel of this year follows and there are the third and fifth cockerels also of this year with the winning pen males of this and last season next in line. All are beautifully mated and all promise results.

The cockerel heading Mr. Thompson's first prize cockerel mating pen at New York last year was the last, but not least, of this wonder lot to be seen and mated with him are the same four females that were shown with him at New York and won the highest class honors.

Such matings and such quality bids well for the future Barred Plymouth Rocks in general and of the "Ringlets" in particular. Ideal shape is most evident and a line feature with barring and color all that we could desire. These qualities have been attained by breeding for them and are bred into this line for generations until they have become fully established in their breeding. There is no chance or guess to it. They have the qualities desired upon which we can bank with full confidence for the future of the breed.

PULLET MATINGS.

Mr. Thompson's pullet line has always been a rich one, full of quality and select, whose winning at the great Garden Show has always been a factor. His pen winnings have been phenomenal and to win pen requires females of the highest type and quality properly mated and matched. This year Mr. Thompson won fifth pullet at New York on a bird that is one of the two best I have ever seen in any show room. Of grand size, perfect shape and carriage, positively even in color from top to tip and of the most exquisite, narrow, clean and straight barring surface and under. Judges and breeders alike admired her, for she had all the essential qualities to grace any award that could be given. Her wings in shape, finish and color were of the best, and she was shown in the best possible condition.

In the pullet matings seen here were many notable birds. The sire of the first pen females, a noble cock of special beauty with a wonder form and head. The sire of the fifth New York pullet, a cock of fine long, full body. Snappy and cleanly barred and others of similar and equal value.

Here was seen upwards of two hundred pullet bred cockerels, full of character and of the most desirable quality. Their narrow line barring a feature, clean-cut and bright and the rule is wonderful wings. Extra strong eyes and grand heads.

The females used are a select collection including many prominent winners of note and breeders of quality. This line of females also have size and shape and are carried well. It is our opinion that Mr. Thompson has improved his female line a good fifty per cent during the past two years. On these as well as on his male line Mr. Thompson is stamping his ideal of quality. He has the right notion and being a sticker is bound to succeed.

In a general way we wish to mention two prominent and out-standing features of this whole line. They are evenness of quality and size, shape and vigor. Taken all in all the evenness of high quality is most evident, for while some few birds naturally stand out strong, none are far behind. They even up wonderfully and in all is seen the desired rich coloring and barring. Heads are fine, eyes strong and similarity very noticeable. Size and bone is extra good with shape, as near perfection as we could ask for. In all of this we can see the work and study of years. We can see the aim and purpose of thirty-five years of breeding and of the study of condition and worth.

Mr. Thompson has made a most pronounced success of his work, a success well deserved, and the American Poultry Association has well shown the esteem in which he is held by electing him as President.

We can well say that Mr. Thompson's matings are better than we have ever seen them. His line is better, his improvement greater and we can confidently look to the future for more results, for we can only expect them from just this style and kind of breeding. We find here an example of what can be

done in the poultry business. He succeeded because he did try and has kept at it all these years and his success is today as solid as old Gibraltar for it is built on worth and breeding quality alone.

Mr. Valentine Thompson is associated with his father and is a born and bred chicken man. He has learned his lesson well and has proven himself a wizard as a grower and conditioner and is a proven factor of the "Ringlet" success.

H. P. SCHWAB.

—o—

AMONG OUR ADVERTISERS.

By H. H. Coburn.

One of the most attractive mating lists that has come to my attention is issued by Frank C. Cole, Van Wert, Ohio. He is a breeder of Buff Rocks and at the last Chicago show made some very fine winnings. His prices are very moderate.

* * *

Eggs from his R. C. Reds, the ones that won at the Cleveland show, are what W. F. Zimmerman, of Willoughby, Ohio, is offering. He has some mighty classy stock to raise winners from and his prices are right.

* * *

If you are in the market for Golden Campine eggs from the farm of Mrs. A. A. Carver, of Seville, Ohio, you will have to hurry, for she is receiving a flood of orders.

* * *

Red Sussex Farm, of Marysville, Mich., is offering silver cups to customers winning first cockerel and pullet, in strain of Red Sussex, at shows of 600 or more entries. Look for their ad.

* * *

"A bird in the hand is worth two in the bush." Buy day-old chicks instead of eggs. That is the advice of G. H. Kichline, proprietor of the Old Honesty Hatchery of New Washington, Ohio. He ships chicks to all parts of the country—chicks that live to grace the show room.

* * *

With his first Cleveland cockerel of a year ago, R. D. Owen, of Creston, Ohio, sired some of this year's biggest winners in Silver Laced Wyandottes. He has again mated this bird with the result of better females than ever, the open lacing is the best I have seen.

* * *

When you have S. C. Black Orpingtons in mind, don't overlook the farm of Gertrude H. Kelly, of Willoughby, Ohio. She has some of the finest birds you ever laid eyes on. Write for her mating list.

* * *

One of the greatest display exhibits at the recent Indianapolis show, was the pen of White Rocks owned by U. R. Fishel, of Hope, Ind. A beautiful lot of birds they attracted the attention of everyone in attendance. Mr. Fishel's breeding pens are larger than ever this year and he is in a position to handle a large egg and baby chick trade.

* * *

One of the largest exclusive breeders of S. C. Buff Leghorns in the country is F. S. Smith, of Hamilton, Ohio. In spite of his very heavy losses in the big flood of last year, he has a wonderful mating list and it will pay you to write him.

* * *

S. D. Hall, the manager of Mound Hill Farm, Seville, Ohio, is in shape to handle any size egg or chick order which you send him. You will find the Mound Hill, Silver and Golden Compines and S. C. White Leghorns very excellent birds.

* * *

With White Wyandottes of the J. C. Fishel & Son strain, Fred T. Rose, of Franklin, Ind., and Strausberg, of Greensburg, Ind., won first cock, third and fourth hen, first cockerel, second pullet, first young pen and first and second old pen.

* * *

One of the world's largest specialty breeders is Gensemer Bros., of Creston, Ohio. They breed Silver and Golden Campines and that they breed them right is shown by their big Cleveland and Chicago Coliseum winnings. Write for a copy of their mating list.

* * *

Charles W. Switzer, of South Euclid, Ohio, has twenty-five pens of the world's best S. C. Buff Orpingtons, mated for the egg trade. Get one of his cockerels and improve your color and type.

* * *

Headed by and containing the win-

SENSATION BLOOD MAKES FEATHERS RED

IDEAL CAN CO., Sole Manufacturers

147 North Washington Street -:- Boston, Massachusetts

ners of Cleveland, Hagerstown and other shows, is what the mating list of W. F. Schultz, of Cuyahoga Falls, Ohio, is composed of. Eggs from these Buff Wyandottes should surely produce birds that will make them all step lively.

* * *

Ernst Birkholz, of Willoughby, Ohio, made a great winning at Cleveland. He is offering cockerels of same breeding as these winners, everyone of them a bird that can reproduce in quality and type. His mating list is now ready. Write for it.

* * *

Charles G. Pape, of Fort Wayne, Ind., is having a rush of orders for settings from his great S. C. Black Minorcas. His mating list is ready, write for a copy. It tells you all about his great winnings.

* * *

Oscar Holtzapple, of Elida, Ohio, had a wonderful breeding year with his S. C. Reds. His mating list contains winners from Cleveland, Toledo, Columbus and Fort Wayne. His reds are especially fine in type, a dark rich, red, running fine in head points. He has a few very fine cockerels for sale and you will not regret bringing his strain into your flock.

* * *

The matings of M. C. De Loof, of Willoughby, Ohio, are headed by his Rose Comb Red winners of Hagerstown, Cleveland, Youngstown and Buffalo. A lot of high-class birds and they will no doubt bring forth some very fancy fowls.

* * *

One of the big Cleveland 1913 winners was Ewing and Romich, of Creston, Ohio. Anyone ordering eggs from the matings of these fine Silver Laced Wyandottes, are bound to get good birds.

* * *

If you are in the market for S. C. Red cockerels that can produce some grand young stock, write to B. M. Billings at Oberlin, Ohio. He also has a very fine mating list and can supply your egg wants.

* * *

The Buschmann-Pierce Red Farms located at Carmel, Ind., have just issued a beautiful three-colored 64-page catalog. It tells you all about their wonderful birds and also about the 40 pens they have mated for this year's egg trade. This book is free. Just drop a line to their main office. Address Buschmann-Pierce Red Farm, 839 State Life Bldg., Indianapolis, Ind.

* * *

W. O. Lyle & Son, of Gnadenhutten, Ohio, have some fine male Partridge Rocks for sale, birds that will make winning cocks, and their prices are reasonable. They have some very fine matings, so be sure to write for the list.

* * *

A record of having won 300 ribbons, cups and A. P. A. medal is what F. S. Bullington, of Richmond, Va., boasts of. This record was made with his S. C. White Orpingtons. Mr. Bullington has had years of success with this type of bird. In fact he was one of the first ones to take up this breed. Today he is the secretary and treasurer of the S. C. White Orpington Club. His farm is located just outside of Richmond, where he has plenty of range for young stock and he also has several farmers who breed for him, so that all in all he has a very large farm. His matings are composed of the finest pens to be found anywhere, so if you want to win get eggs from them. A Blue Ribbon male will be of great help to you. Write for prices.

* * *

A very neat mating list just out tells you all about his great list of winners. Letters from his satisfied customers and several half-tone cuts of his beautiful Single Comb Reds, is what B. H. Scranton, of Rising Sun, Ind., is sending all who ask for a copy. Be sure to get a copy.

* * *

One of the large specialty breeders is Willard J. Thorniley, of Marietta, Ohio. He raises Anconas, raises them by the hundreds and ships eggs in large quantities all over. He has some very fine matings and no matter how small or how large your order may be, he will be glad to serve you. All the cuts shown in his catalog are from life unretouched, as you will find if you visit his farm, where you are at all times welcome. A man who has been producing winners for years, it will pay you to write for his mating list.

* * *

At the recent Detroit show, the Longfield Farms R. C. Reds, of Bluffton, Ind., won first cock, second and third hen, first, second, fourth and fifth pullet, first and second cockerel, first old pen, second young pen, medal for best pen and silver cup for best display. A very fine record won by a fine firm.

* * *

Showing his Wingold Buff Orpingtons at the late Detroit show, F. A. Poertner, of Berea, Ohio, won fourth cock, fourth hen, fourth cockerel, first, fourth and fifth pullet, second and third pen, silver cup for best display, silver cup for best pullet, cash special for best cock, hen, cockerel and pullet, also cash special on pen. At the great International show at Buffalo he won second, third and fourth cock, first, second and third hen, first, second and fourth cockerel, first, second and third pullet, first and second pen, silver cup for best display, cash special for best display in English class (this special was 92 points and the nearest competitor was 76) also silver cup for most points on pens in English class. This great list of winners is in Mr. Poertner's yards for the 1914 egg trade. The Wingolds also won the championship cup at Cleveland, Buffalo and Detroit.

* * *

With King Ringy the fifth heading one of his many pens, W. D. Holterman, of Fort Wayne, Ind., is in a position to handle a large egg trade. Mr. Holterman has just issued a handsome new catalog, it is free if you write him and mention the A. P. J.

* * *

Black, White and Buff Orpingtons, White, Brown and Buff Leghorns, Partridges, Barred and White Plymouth Rocks, S. C. Rhode Island Reds, S. C. Black Minorcas, Anconas, Buff Cochins, White Wyandottes and Cornish Indian Games—are the different varieties of "baby chicks" that are raised by the

Erected Sections All Ready for Shipment

The Incubator that you will receive and can install the quickest.

Newtown Giant Incubators are now shipped in erected sections—four compartments to a section. Hundreds of these sections are now in our warehouse ready to go forward. We have been working overtime to prepare to promptly accommodate those poultrymen who did not find it convenient to order before.

Each section of the Newtown Giant is erected at the factory with the exception of the pipes, which are shipped separately in bundles, reducing the freight cost. Any handy man can set these sections up on their legs, bolt them together and insert the factory-threaded and fitted pipes.
You will not need expert and expensive mechanics from the factory to install your Newtown. It will save you the erectors' railroad fare and expenses. It will save you the time and worry of waiting for the erectors to arrive, as you can easily and quickly install it yourself. It will save you much in freight charges, because the heaviest parts are shipped "knocked down."

NEWTOWN GIANT INCUBATOR

Also consider these exclusive incubator features that you will get with your Newtown Giant:

One-Minute Egg Trays Turner
Automatic Coal Feeder at Heater
Automatic Regulator of Heat, Ventilation and Moisture at Each Compartment
Single and Double Decks
Five Safeguards against "Off" Temperature
Automatic Alarm

With your Newtown Giant, you'll be able to turn all your eggs in less than 60 seconds—coal your fire but once in 24 to 48 hours—have the temperature and moisture accurately and automatically regulated in each compartment without attention—and the Five Newtown Safeguards will make your hatching a pleasure instead of a worry and a "grind."
Further convince yourself that the Newtown Giant Incubator is the machine you should install for the greatest economy of operation, no danger of loss of eggs, constant ease of mind, and for the biggest hatches of the best chicks.
Write now for catalog which contains many illustrations that plainly show each Newtown feature. A reply will come to you by return mail and shipment of your machine will be made immediately upon receipt of your order.

Newtown Giant Incubator Corp'n, 21 Warsaw Street, Harrisonburg, Va.

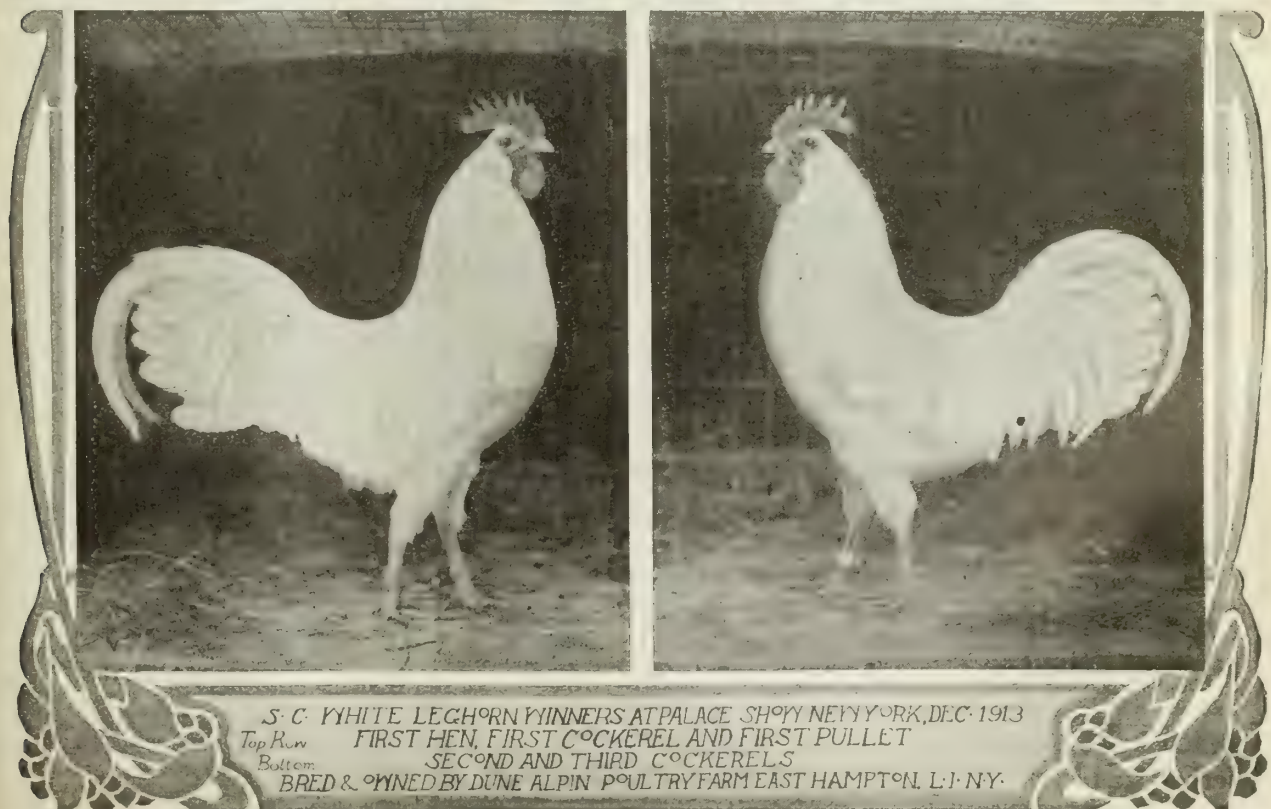
Miami Poultry Yards of Trenton, Ohio. This farm is owned by Joseph L. Heston. He has a capacity of 150,000 chicks and the equipment to raise, to hatch them into strong healthy birds, so that he can ship them to you in such shape that they are ready to go scratching. The parent stock is range raised and as good as the best.

* * *

The Wendell Incubator Co. of Holly, Michigan, are putting out a first-class incubator known as "Our Poor Man's Friend," sells for $6.98, also a 50-chick size for $2.50. The Wendell goods are built on merit and give absolute satisfaction. Write for catalog and mention A. P. J.

* * *

The 20th Century Hatchery of Chatfield, Ohio, are receiving a flood of orders for their White and Brown Leghorns, White and Barred Rocks and Rose Comb Red, baby chicks. This firm also handles poultry houses and brooder heaters. Write them for catalog and prices.



* * *

With a capacity of 100,000 eggs at one time, the Co-Operative Breeding and Hatching Co., of Tiro, Ohio, are rushed to their limit with baby chick orders. A high-class plant modern in every way, they turn out chicks healthy and strong, the kind that go into shows and win ribbons. No order is too large or too small. Write for their prices.

* * *

Located just on the edge of Bremen, Ohio, is the farm of A. F. Lyman, the S. C. White Orpington breeder. He uses colony houses exclusively and with plenty of range nice and shady, his chicks have a perfect paradise. Making one entry at Columbus he captured second pen. They were perfect snow white birds. At Chillicothe A. P. A. show he won third cock and second hen on two

J. H. McDanell, owner of the Old Homestead Farm, located at Warsaw, Ky., has shown his Golden and Columbian Wyandottes at Chicago, Pittsburgh, Louisville and Cincinnati for years and always came home a winner. His birds are grand in type with beautiful black points. His Goldens are as fine as any that have been produced. His mating list is a large one. Write for prices.

* * *

Rose Comb Reds owned by the Longfield Poultry Farm were exhibited at the late Detroit show and captured 1st cock, 2nd and 3d hen, 1st, 2nd and 4th pullet, 1st and 2nd cockerel, 2nd young pen, 1st old pen, cup for best display, and medal for best pen. This great winning on top of their Chicago Coliseum record places their birds in a class by themselves. Look up their ad and write them. Address Longfield Poultry Farm, Box 321, Bluffton, Ind.

* * *

At the recent St. Louis show, the Blue Ribbon Poultry Farm of Columbus, Indiana, made a clean sweep with Black Orpingtons. They exhibited at two shows at the same time, winning 9 firsts and 8 seconds, out of a possible ten in each show. It is a record that will go down in Black Orpington history. They have some grand stock for sale and it will pay you to buy a show bird for next season, so as to raise your own young show birds. Mr. Carter is mating some fine birds. You can't go wrong by giving him your egg order.

* * *

Four out of a possible six firsts, at the Cincinnati show, was the record of Bruce & Abbott of Whiteland, Indiana. This record was made with S. C. Buff Orpingtons. They also won cup for best display, all Orpington varieties competing; cup for best display of Buffs, cup for best winning on cocks, cup for best winning on hens and cup for best cockerel, cock, hen, pullet and pen. Their regular premiums were 2nd, 3d, 4th and 5th cock; 1st and 2nd hen; 1st, 3rd and 4th cockerel; 2nd, 3rd and 5th pullet; 1st, 2nd and 4th old pen and 1st, 2nd and 3rd young pen. These wonderful birds are in their matings for the 1914 egg trade.

———o———

Parsons' Poultry Plant.

In our last issue we called attention to Parson's winnings at Toledo, giving credit for three firsts, two seconds, one third and two fifths.

Our representative made an error in writing the Parsons' great list of ribbons and we hasten to correct same; they won four first prizes, two seconds, one third and three fifths, this in a large class. Another error was made in crediting them with fourth and fifth S. C. Black Orpington cock at the January Cleveland show. This should have been S. C. White Orpington, for the Parson's Plant hasn't a black fowl on their place. They have just issued a very neat and attractive mating list, so before buying get a copy. Address Parsons' Poultry Plant, Avon Lake, Ohio.

———o———

The Byers Egg Guarantee.

A new policy has been inaugurated by C. S. Byers, Orpington Specialist (Buffs, Blacks and Whites) Hazelrigg, Ind., along the line of eggs for hatching. He guarantees eight chicks to each and every setting purchased and if a less number hatch he will duplicate the original order absolutely free of charge whatever the cause of the poor hatch may have been. His only provision under these terms is that the purchaser be honest in his report of the hatch. He is the first, or among the first, to pronounce such a guarantee and readers should have cause to take particular notice of this most liberal guarantee on the part of Mr. Byers. In submitting this proposition to his customers he can only lose through the patronage of unscrupulous customers.

"The Sure Good One."

So much is said about the oyster shells as a necessary medium for lime for the chicken for egg and shell making material as if it were the only available article. Now while oyster shells are all right and we can afford to say so, if you will become acquainted with Crys-co, you will find that it not only has more available lime than oyster shells, but is an excellent grit besides.

Now what is Crys-co? It is the crystalized or petrified shell formation, from ages past, (nature's own product) in plain words, sea shells, all kinds, turned into stone, guaranteed to contain 99 per cent pure carbonate of lime. Silica, a natural glass, is contained in the combination making Crys-co hard, sharp and cubical so that it is virtually oyster shells in grit form.

Crys-co is endorsed by experiment stations and prominent breeders in the United States, who have made careful tests of same, so if you are looking for increased egg production, finer plumaged birds and more economical results, it will pay you to try it. Cost one cent per pound. Ask your dealer or write for booklet. W. A. Neusitz & Co., St. Louis, Mo.

Trap Nests.

One of the simplest and most practical "trap nests" on the market is made of galvanized iron, costs but little more than an ordinary box and is known as the Economy Trap Nest.

Just think of it, a real sanitary nest "with trap attachment" at just a little more than a common nest would cost you. The trap is very simple and is comprised of two pieces of galvanized iron, hinged together and suspended by a hinge from roof of nest box. The ends of same slide on flanges at the side of the box, keeping it in place and preventing the hen when inside, from pushing the trap out and when outside pushing it in when closed. There are no wire triggers to set and no wires of any kind in the nest for hens to break their feathers on.

Also made in "wooden nest" with trap made of galvanized iron, and they are made with doors in back if you want them. All in all they are perfect and you should have one or more of them.

Niemann Bros. Mfg. Co., of Mt. Olive, Ill., manufactures them and if you will write them, they will be pleased to quote you prices and send you their complete catalog of hundreds of other poultry appliances. When writing be sure to mention American Poultry Journal.

Twenty Years' Temptation.

Ever since I started in the Incubator business twenty years ago, I made up my mind to produce an incubator which I could recommend in the highest possible terms and guarantee conscientiously, yet not over state things.

Almost every year for twenty years I have been advised by well-meaning people to make an Incubator with thinner walls, less durable tanks and lamps, lower in the egg chamber, or in fact, something that could be produced cheaper, so that I would be able to meet competition better. I have refused persistently to do this, because I was convinced I was right in maintaining the substantial, high-class construction of my machines and that sooner or later the poultry raisers of this country would realize it would be to their advantage to pay a little bit more money and get something that gave them satisfaction for many years.

This season, more than ever before, have I realized that this course has been the right one. I have received more testimonial letters and more follow up orders from my old customers than ever before. The fact of the matter is, forty per cent of my business so far this season has been obtained from our old customers or their friends. If you haven't my one hundred and twenty-eight page catalog, I shall be pleased to send it to you. Address J. S. Gilcrest, Des Moines Incubator Co., 1 Second St., Des Moines, Ia.

If you are going to get eggs or chicks in White Wyandottes, do not fail to write Sherman Bowden, Mansfield, Ohio, for his large illustrated mating list which he sends free. His recent winnings at the two big Cleveland, Ohio Shows is a record seldom made by one exhibitor in as popular a variety as the White Wyandottes and as big a class as are at the above shows. He also is making a specialty of two-months-old chicks.

Billings' R. I. Reds, Both Combs

I wish to say to the public that I am this season better prepared than ever to furnish winners for the coming fall and winter shows. They have the shape, color, markings and head gear that appeals to the most careful breeder. Also have good breeders at $3.00 to $5.00 each. Utility stock $1.00 each. Satisfaction guaranteed. Mention American Poultry Journal.

B. M. BILLINGS, Box A, Oberlin, Ohio

Shields' S. and R. C. Reds

Winners at leading shows wherever shown. Young stock and last season's breeders and exhibition birds at reasonable prices. No better breeding. Write today.

PEABODY FARMS DEPT. A HINSDALE, ILLINOIS

Deming's Champion Strain Single Comb Rhode Island Reds

Winners of over 400 prizes the past 8 years. During the season of 1912-13 they have won at Grand Central Palace, Madison Square Garden, Boston, Albany and other large shows.

At the recent Madison Square Garden Show I won First on Pullet, Sixth Pen. At the Garden Show, Dec. 28, 1912 to Jan. 4, 1913, I won Third Pen and Fourth Cock. Some superb matings this season. Eggs from exhibition pens, $10 per 15 eggs. Send for mating list. Breeding and exhibition stock for sale at all times. **H. P. Deming, Robertsville, Conn.**

FELCH OFFERS

The product of his breeding pens of 1913 in **Brahmas, White Orpingtons, White and Barred Rocks and White Wyandottes** that seem better than any previous years output. Send for circulars and particulars. Mention A. P. J.

Walden's Barred Rocks

Win at Baltimore, Md., 1914

First Prize Hen and Shape Female and Second and Fourth Pullets

The Pullet Bred Line a Specialty

My birds have won this year also at Philadelphia, Williamsport, Pittsburgh, Hagerstown, etc. For years they have won at leading shows. If you are interested in Quality **My Maryland Strain** will interest you.

My New Catalogue for the Asking

It gives you full and complete information of my line with prices, etc. Eggs for hatching from selected pens containing all my winners. Write me your wants today.

R. J. WALDEN Box A MIDDLEBURG, MARYLAND

Something New.

The Dune Alpin Poultry Farm, breeders of Single Comb White Leghorns, have just issued a neat little four-page folder. The cover shows their first prize cock at the 1913 Boston show, while the inside pages are devoted to the list of their winnings for the season, also quoting prices on eggs and baby chicks. It tells you all you want to know about their big ribbon winners and tells you in a few words. At present writing they are publishing a handsome mating list, so be sure to send in your name so that you will get a copy. Address Dune Alpin Poultry Farm, East Hampton, N. Y.

An Old Timer.

One of the old-timers, a breeder for the past twenty years, is our friend, Judge Charles Nixon. He is conceded to be one of the best poultry judges in the country and officiates at the leading shows.

When he is not in the show room picking out the birds of perfection, he is at Washington, N. J., on that big modern farm of his, raising the "Mapleside Strain" of White Wyandottes. There is no doubt but that the judge can tell good birds, but don't overlook the fact that he also knows how to breed "good birds." You can see Mapleside Strain birds winning at all big shows, no matter where you go, and anyone who buys his eggs or stock can rest assured they are buying quality.

Just drop the Judge a card, tell him what you want and he will be glad to quote you prices. Address Mapleside Poultry Yards, Washington, N. J.

A New One.

With this issue of the A. P. J. I wish to call your attention to an old breeder, but a new advertiser. He has been in the game for the past five years and in that time has made a wonderful show record.

Mr. Syl. T. McCabe of Columbus, Ohio, breeds S. C. Black Orpingtons and the following list of prize winners are all in his mating pens. His yearling cock bird January Jr. is one of the greatest birds ever shown. He won 1st cockerel at 1913 Ohio State Show, then as a cock bird 1st at the same show of 1914, 1st cock at American Fanciers' Assn., at Cincinnati, also special ribbon for best shaped male. At the Columbus State Show, 1913, Mr. McCabe won 1st cock, 1st and 2nd cockerel and 4th hen, on four entries. On five entries at the American Fanciers' Assn. Show, Dec., 1913, he won 1st cock, 2nd and 4th cockerel, 3rd and 4th hen. At the same show of 1912, on two entries, he won 2nd cock and 3rd cockerel. At the 1914 Columbus, Ohio, State Show, 1st cock, 1st and 2nd cockerel; 1st, 2nd, 3rd and 4th hen; 1st pen; "he did not enter any pullets," ribbon for best shaped male and ribbon for best female. He has made a very good record and it will pay you to get his prices. Address, Syl. T. McCabe, 535 W. 4th Ave., Columbus, Ohio.—H. H. Coburn.

For 20 Years.

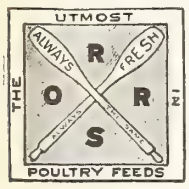
Chas. V. Keeler has been handling White Wyandottes, and today he stands among the largest exclusive breeders that we have. His birds are known as "The World's Greatest Strain," and have won at such leading shows as New York, Chicago, St. Louis, Pittsburgh, New Orleans, Indianapolis, Washington, Kansas City, Dallas, Los Angeles, Portland World's Fair, also a number of smaller shows. Stock raised from his eggs are shipped to all parts of the globe, England, South Africa, New Zealand and Australia. At the 1914 Indianapolis show he captured 1st, 2nd, 3rd and 5th cock; 1st, 2nd, 3rd and 5th hen, 1st, 3rd, 4th and 5th cockerel; 1st, 2nd, 3rd and 4th old pen; 1st, 2nd and 3rd young pen; silver cup for best display; Natl. White Wyandotte Club silver cup for best cock, hen, cockerel and pullet. These birds looked beautiful and they were all as white as snow.

Mr. Keeler has about 2,000 birds for sale, besides having 16 pens mated, all pens headed by winners. He is in a position to handle any and all orders. Just write him your wants, he will do the rest. Address, Chas. V. Keeler, Route 11, Winamac, Ind.—H. H. Coburn.

A Wonderful Farm.

Some time ago I had the pleasure of calling on N. V. Fogg, one of the largest and leading S. C. White Leghorn breeders in the United States. Mr. Fogg's farm is enormous and with its buildings and colony houses it reminds one of a small city. Here you will find them shipping eggs and baby chicks by the thousands, and he must give satisfaction, for year after year the same people come back and buy. The birds are all raised on free range and when it comes breeding time Mr. Fogg selects the cream of his 6,000 females, assuring you of the best he has. This is one farm that is a strong advocate of old females and they have proven by actual test, that they produce stronger chicks. Therefore his yards contain hundreds of two and three year old hens. Each year he mates up ten "extra fine" pens for fancy chick and egg trade. His cockerels win prizes all over the country. This year's matings contain 900 birds, therefore, he is in a position to fill any order of any size. Make a trip to this big farm some day. It is well worth the money spent to see it. Write for catalog. Address, N. V. Fogg, Mount Sterling, Ky.—H. H. Coburn.

Pleasant View.



Is the name of Paul Klingbeil's farm, located at Walpole, Mass. It is the home of his famous Partridge Plymouth Rocks, the birds who are always in the winning list at the big New York and Boston shows. In fact, his birds are so good that with every advertisement he runs, he always says "satisfaction guaranteed."

At the recent Boston show Mr. Klingbeil did not enter any birds for prizes, but he had two of the best pens of Partridge Rocks that were ever displayed.

If you will drop Mr. Klingbeil a postal he will be glad to quote you prices. Address Pleasant View Fruit and Poultry Farm, Walpole, Mass.

When you look at the list of winners from the big shows, you are always sure to find the Payne Bros. and their Rose Comb Rhode Island Reds.

These two gentlemen, living down at Portland, Conn., have one of the finest equipped poultry plants in the country; it is modern in every way and a trip to their place is a pleasure never to be forgotten. We doubt if you will find better birds in the world than those raised by them and it will pay you to write them for prices. Address Payne Bros., Portland, Conn.

Orr's Special Chick Feed

Used by such men as D. W. Young; H. J. Fiske; D. J. Lambert, E. B. Thompson; Est. J. P. Morgan; Est. E. H. Harriman, and many others. Don't ruin the baby chicks with an inferior chick feed. We guarantee every particle; it is sound, sweet and palatable; will not get musty or sour. **It's always fresh.** You cannot raise the best strong, hardy chicks without **Orr's Chick Feed.** Our **mash, scratch** and **growing feeds** are the best made. **Old white cracked corn** one of our specialties. Send for booklet free; also price list.

WM. ORR & SONS . Box 5 ORR'S MILLS, NEW YORK

PREMIER WHITE WYANDOTTES

CHAMPIONS AT CANADA'S GREATEST SHOW, 1913

At the **"Ontario,"** Canada's Madison Square Garden Show (6,000 birds shown), in a class of 259 White Wyandottes, my birds won: Hens, 1st and 7th; Cock, 8th; Cockerels, 2nd, 7th, 8th and 10th (79 competing); Pullets, 2nd, 3rd, 4th, 5th, 6th, 7th and 9th (79 competing); $50.00 Club Silver Challenge Cup and the Bullock Memorial Cup for best Cock, Hen, Cockerel and Pullet. Special for best Hen. Special for best Cockerel and Pullet, Collection, etc., completing a record win of exceptional merit in a wonderful class of quality and winning more regular and special prizes than any five of my competitors combined.

Eggs, $5 per 15. Write today.

SID SAUNDERS, Secy.-Treas. Can. W. Wyandotte Club, Box A, INGERSOLL, ONT.

If I Buy Baby Chicks Will They Mature Into Pullets Like These?

Will they grow into birds that I can feel proud of and that will lay Winter eggs in quantities, or win the blue ribbons for me, or will they be just scrubs, that's the question before everyone who buys day-old chicks. It is not the first price that counts—but will they be right at maturity?

Caldwell's White Plymouth Rock (Fishel Strain) "Baby Chicks of Quality"

From Utility Matings

Will mature into long backed, well made birds, pure white in color, that will be the secret of "Winter eggs." Every utility breeder is descended from known good layers that have been bred that way.

From Exhibition Matings

Will mature into blue ribbon winners. Every exhibition pen is made up of birds with good combs, of good type and chalk white in color, possessing the rich blood lines of generations of Fishel blue ribbon winners. Our birds were among the principal winners at the Indiana Fanciers' Show, Indianapolis, 1912.

Our Flocks are Vigorous

All Fall our flocks have roamed meadows and woods accumulating health and vigor. They are now in Winter quarters so full of life and vitality that their chicks will be strong and sturdy.

Here is the Caldwell Selling Plan

We are now booking orders for "Baby Chicks of Quality" for Spring delivery. We never have been in such fine shape to handle orders of any size. Our fine plant is fully stocked with the finest birds we ever owned of both utility and exhibition quality. An early placed order enables us to so arrange our hatchings that we save money. By your faith you are entitled to that saving so we will allow you discounts for early placed orders, the earlier the greater the discount. **Safe arrival of chicks is guaranteed.**

A New Catalog Is Now Ready

One of the finest ever issued by any breeder. It tells just how "Baby Chicks of Quality" are produced and describes every grade of stock that we have to sell with prices. A copy is ready for you,

R. C. Caldwell : Box 1021 : Lyndon, Ross County, Ohio

Notes from the South-west

Conducted by H. H. Stoddard, Riviera, Texas

It Takes Time.

HAVE said before in these columns, and want to repeat, with extreme emphasis, that a perfect machine or a perfect system of industry cannot be contrived in a year, or in ten years. Have worked a long time trying to perfect a coop for a hen with her brood. Think it will take two years longer at least to master this seemingly insignificant subject. Hundreds of pictures showing as many different styles of coops have been published during forty years, in poultry books and papers. It is to laugh at the whole shooting match, if you contemplate brooding large numbers of chickens by the natural method. It is harder to contrive such a coop then to invent a good brooder.

* * *

The blue-bug pest is exclusively a southern institution, so far as I know. Have never seen a blue bug, but he is cousin to the bed bug. Very hard to eradicate when once in a poultry house. He is long and thin and forces himself into a very small crevice. A swarm of blue bugs will kill an adult fowl in one night if the bird is confined in a coop where it cannot escape. In some parts of Texas it has occurred again and again, so that people have burned their poultry houses to the ground in desperation, after trying every insecticide in the drug store.

* * *

"The simple coating of eggs with unsalted lard is said, by the Lucca (Italy) Chamber of Commerce, to keep them perfectly fresh for a year if stored in a cool, airy place, according to a report from Consul Deedmeyer, of Leghorn."

There it is again. When I was in the alphabet class, people were trying to keep eggs fresh by stopping the pores with this and that. You might as well try to make hair grow on the lid of a copper tea kettle by using a quack hair restorer. Grease or oil of any kind keeps out the air, thus retarding decay somewhat, but the oil soon becomes rancid, giving to the contents of the egg what Shakespeare calls "a most ancient and fish-like smell." Thus the remedy becomes worse than the disease.

* * *

The best place for farming is not the best place for poultry, and the best place for poultry is not the best place for farming. When thirty-five to forty-five inches of rain is the annual average it is a good farming locality, if soil and other things are right, but there is too much wet for poultry to thrive to the utmost. Where the rainfall is twenty inches or below, poultry are happy, but farming if carried on at all must be by the Campbell system, or else by the expensive method of irrigation. There is a curious betwixt and between region where I am, in Kleberg County, Texas. Rainfall is twenty-five and six-tenths inches and so evenly distributed through the year that fowls roosting in the open do not mind it, and yet by a tight squeeze, rape and other poultry greens can ordinarily be raised by rainfall farming.

* * *

Almost always when people tell you they are thinking of "going into the poultry business" they have their eyes on raising chickens to sell for the food market. But in running the first regular egg farm that so far as known ever existed in this country (for in the early sixties there was no need of any) it

1914 Model

Beats the Neighborhood

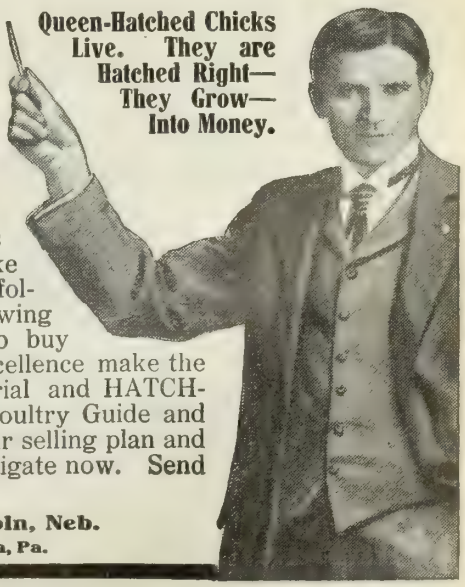
I ran the little Queen at sea level when the ice froze one inch thick in a pan under it and got 112 chicks out of 118 eggs. I skinned everything in the neighborhood, and mind you, this is my first experience with incubators.

M. L. PETERMAN, Fraser Mills, Can.

201 Eggs, 200 Chicks

With 232 eggs, 201 after testing, I hatched 200 chicks and one failed to pip the shell. Am sending picture. I must say I am more than pleased with my Queen and would not do without it.

CHAS. J. RAUGH,
Jenero, Ohio



Started With One QUEEN—Now Using Forty-four

This QUEEN worked so satisfactorily that in the following spring we ordered six more of the same size (360-egg). When we decided to establish our large hatchery in Philadelphia in 1911, we placed our order with you for 23 more 360-egg QUEENS. This spring (1913) we purchased 10 of the Ranch size QUEENS (560 eggs) and altogether we are now operating thirty-four 360-egg QUEENS and ten 560-egg QUEENS. They turn out a better average per cent hatch and produce stronger chicks than any other make we ever used.

C. TOWNSEND ALLEN, Mgr. Orchard Poultry Farms, Philadelphia, Pa.

Put your good eggs in this dependable machine.
You can do what others are doing with the

Queen Incubator

Queen-Hatched Chicks Live. They are Hatched Right—They Grow—Into Money.

Hatching chicks is a certainty with the Queen—the incubator that runs itself; that runs true; that applies hatching conditions correctly the year around. It is not just a few people who make Queen successes. Everybody succeeds with the Queen who follows our instructions. See above letters. Success means growing into bigger business. A Queen hatches out the money to buy additional machines and make bigger profit. 28 points of excellence make the Automatic Queen distinctive in construction, quality of material and HATCHABILITY. Don't buy any incubator till you read the Queen Poultry Guide and catalog. It is free. It makes everything plain, including the fair selling plan and low price laid down at your railroad station. Start in to investigate now. Send for book today.

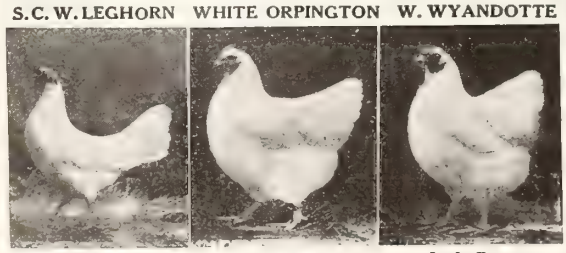
from profitable layers is your only guarantee for SUCCESS in the poultry business.

Isn't it a serious matter when eggs are selling for 35c to 50c a dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from.

I breed for eggs and can furnish you stock that will lay when eggs are high. THAT MEANS YOUR SUCCESS.

PRICES:	EGGS	BABY CHICKS
From Stock with records of better than 200 eggs and their special matings	30c each	50c each
From stock with records of 144 to 199 eggs and their special matings	20c each	35c each
From stock without records but from trap-nested blood lines	10c each	20c each



Note:—There are no discounts on eggs or baby chicks in lots of less than 200. Can make prompt delivery of eggs and baby chicks. Write for sales list. My instructive catalog is free.

John G. Poorman:

Midlothian Farms and Hatchery

Box 100 : : : : Tinley Park, Illinois

S.C.W. LEGHORN | WHITE ORPINGTON | W. WYANDOTTE

Lady Beatrice 240 Eggs | Lady Grace 232 Eggs | Lady Rose 232 Eggs

was discovered, and published at the time, that the surplus cockerels and hens past their prime kept the meat side of the poultry market better supplied than the egg side. It has been that way ever since, and with the discrepancy constantly increasing. The first regular egg route of record, where families were served just as milk had been for quite a while, served on regular milk routes, was at Hartford, Conn., and revealed the fact that, whether the customers were rich or poor or half way between, it seemed to make no difference, they could not or would not buy all the poultry live or dressed that had to be kept in order to produce the eggs the same families needed. In various parts of the country in years past it has occurred again and again that poultry has been raised and sold for not enough profit to pay for greasing the wheels of the wagon that hauled it to the railroad, but the people have kept right on crying louder and louder for fresh eggs.

* * *

Labor Saving.

In a few years the term "labor saving" will be bobbing up everywhere in the poultry press, and less will be heard about one hand not being able to tend more than one thousand fowls properly. This reminds me of a party, who came visiting here from Florida where he said he had been giving his whole time to poultry and kept fifteen hundred layers. He could keep two thousand, he calculated, and "do it right," but that number would be about the limit. Further conversation brought out the fact that he had nothing to do with hatching and rearing the chicks to keep good the number of layers. "My wife attends to that. She kills off a lot when first out of the incubator and then after a while kills a lot more, so that they are strong when I get hold of them. Never mind losing a lot of them. I attend to making them lay. That is where I shine." And I thought, though I said nothing, yes, you must indeed "shine" like a gem of first water or a bright star in the firmament, considering that the principal labor is hatching and rearing, and care after that isn't much and gives time to read or play checkers.

Supplying green stuff in proper quantity and chopped just right takes more time than any other branch; gathering eggs where the climate demands that it must be done often and packing them comes next; rearing chicks next, attending to hatching next, and caring for the laying stock involves the least time of all. I am, of course, not talking about a temperate latitude, which is anyway, in my opinion, not a decent place to keep poultry in large numbers.

* * *

Cottonseed.

If fowls, like cows, would only tackle cottonseed whole! The meal is the very cheapest form of protein. It is also commonly extremely fresh and sweet, so that it is even adapted for human consumption when properly cooked. As is well known, cottonseed oil is sent to Italy coming back, masquerading as "fine olive oil" suitable for delicate salads. Careful and thorough station experiments have been made as to the value of cottonseed meal as hog feed, proving that it is very serviceable and economical. Wish the stations would try it more extensively on fowls than they have done and give all poultrymen the benefit of reliable reports.

* * *

Would that there were some highly

proteinous species of grain cheaper than wheat, and as easily raised in enormous quantities as are the seeds of the non-saccharine canes. These are too much like corn to serve as wheat substitutes. Who knows but some Burbank may breed a member of the cane group to a special proteinous content? Seemingly several much more difficult things have been accomplished in the vegetable world.

If the Experiment Stations would try a sufficient number of times to find out absolutely the results when whole grains and seeds of various sorts and no ground stuff at all are fed to young and old, all their lives, compared with rations of partly whole and partly ground grains they would do lots of good. It won't do to try a dozen or twenty or a hundred birds a year and base conclusions on that. Try it till they are two or three years old. And try it on many flocks, and always have check flocks. Be sure and have the check flocks consist of exactly the same sort of fowls as regards age, housing and yarding or range, breed, vigor at the start, and every ingredient of the feed absolutely the same as regards chemical qualities, the difference being purely mechanical. And have the birds in all the flocks from stock never in an incubator or brooder for generations past so that the results will amount to something.

* * *

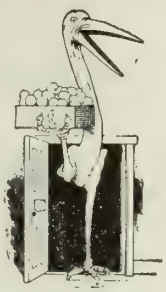
Indispensable Stations.

Lest I seem to preach too much on the necessity of the Experiment Stations behaving themselves better than they have been doing, just look at the results of the loudly trumpeted laying contests. Costly trials have been made to find the best breed for laying, and lo, and behold, the breed that is the best at one time stands low at another time at the same station, and is markedly different at different stations the same year.

They have been trying strains, really, not breeds, and have not been really trying them fairly at that, the ages of the competing pullets and other important factors having been sadly jumbled.

What I want very much to know myself today is the comparative laying merits of breeds, and after an experience of over seventy years keeping fowls, I do not know this. Of what earthly use is it to find that Jones' strain of Red Barbalusians lays better than Browns' particular strain of the same breed or of some other breed?

Of course, if I, an ignorant layman, assume to lay out work for a learned station staff they will say: "Teach your grandmother to suck eggs," but now, actually, honor bright, if I, right here in my grand and glorious adopted state of Texas, was determined to know whether White Wyandottes, or S. C. White Leghorns, or Barred Plymouth Rocks, were the best layers, absolutely, and also the best layers, amount of food and size of eggs considered, I would have to make my tests, not with groups representing strains, but with collections of one or a few birds from each of as many scattered sources as possible. This is too costly a proceeding for a private individual. Such work belongs to a "Sovereign State." I expect to die without ever having known the exact comparative laying merits of breeds.



While I am speaking of the official laying contests I want to say that they have proved what was well known before, i. e., that some hens are capable of great laying feats; but the officials should also set under hens some of the eggs of some of the great winners and find out how their progeny perform, and the great winners themselves should be retained at the station to see how their laying holds out during the next two years.

* * *

Head Versus Hands.

A woman, bright and ambitious but profoundly ignorant of poultry keeping, wants to make it a business and give her whole time to it. She came to me for advice lately, and said that what filled her with dismay at the outset was the thought of building coops and such like with her "unskilled hands." I said that even were she as fully skilled at that sort of simple carpentering as some women poultry keepers at Riviera are, it would be businesslike to let it alone. She couldn't see why, and I said there were plenty of carpenters who would do it for forty cents an hour, and others, not carpenters, but simply handy with tools, who would work for twenty-five cents. If your time with fowls isn't worth fifty or sixty cents or more per hour you have no call to be in the poultry business. Same reasoning applies to a man raising his own grain for his own fowls on his own one-man poultry farm.

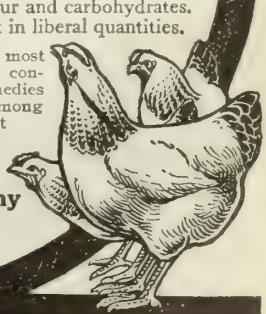
Your Hens Need It!

PEARL "THROW PEARL TO POULTRY AND WATCH RESULTS" GRIT T.O.M.CO. TRADE MARK



They need Pearl Grit just as badly as you need teeth. They need it to help grind their food—to make it more digestible. Pearl Grit is the best, hardest, cleanest and sharpest grit you can buy. Helps hens quickly pass the molting season—helps them lay more eggs—makes them stronger, healthier, better birds.

Pearl Grit

Serves a double purpose. Its benefits to the fowl are two-fold. Besides helping the digestive organs, it possesses great shell, egg and feather-making properties. Egg shells contain a considerable amount of lime while the egg itself contains, among other substances, sulphur and carbohydrates. All of these ingredients are found in Pearl Grit in liberal quantities.

We have just issued one of the most handsome poultry booklets ever seen. It contains simple instructions and remedies for many of the common diseases among chickens. It also tells why Pearl Grit is such a practical food. Send for a free copy today. A postal will do.

The Ohio Marble Company
10 S. Cleveland Street
PIQUA, OHIO

Not only should a thoroughly expert commercial poultry raiser avoid unskilled labor personally, but as soon as he can do so, he should instruct competent understudies to do the skilled work too, and after that he should do nothing but "boss." Bossing is popularly supposed to be an easy job, but, my beloved brethren, it is the hardest thing of all if you are pioneering in a new industry, making your own precedents as you go, and knowing full well that it is the rarest thing in the world to get a new industrial kinkum right the first time. The factory system has an advantage in being a system. I mean that different low-priced employees can be instructed for different branches of the work and can learn how to do just thus and so, same as at all the great manufactories.

I said awhile ago that some stations, other than the Missouri Station, to make doubly sure, should run on the side complete commercial poultry plants, with sufficient labor-saving contrivances to assure a profit, and publish every item of outgo and income, labor of course included, for the benefit of the public. After such plants have been proved profitable, then, by having not one-man plants, but ten-men plants and twenty-men plants, cheap unskilled hands can be taught to skilled labor, as above described, and the larger plant will be more profitable in proportion than the smaller.

The big producers of the world are those who find out how things should be done, and then show others, as Dr. P. T. Woods proclaimed, the necessity of living vegetable cells in poultry food on top of the dead cells of ground grains, mashes, rowen hay and other dry stuff, thus causing every year an aggregate of thousands of acres to be "clothed in living green," from the Atlantic to the Pacific, here and in foreign lands also. As I have said before, he also taught the advantages of the open-front poultry houses which have since in countless numbers dotted both hemispheres wherever there are domestic fowls, and as a crowning result of the labors of the best working years of his life, people's minds have been awakened all over the world to the importance of fresh air for themselves, and sleeping porches are multiplying everywhere. Poultry keeping being the most universal employment in the world, cooking excepted, the lesson on fresh air for fowls gave a corresponding les-

* * *

Beginning Big.

You cannot to advantage begin with a few fowls, kept in the usual manner, and "work up," if your aim is commercial poultry raising on a large scale; because almost everything must be done differently on the commercial plant compared with the small one. You can "begin with a few," as is urged hundreds of times, if you want to, and you will end with a few. Seldom do any above an extremely small per cent of aspirants accumulate more than five hundred or six hundred layers. By that time they usually get to the end of their tether, and either see that their income is pitifully small in proportion to the time spent, or they have just worked their legs off, and quit because of "that tired feeling." This failure has been repeated so many times that one poultry editor asserts that poultry and eggs for the food market can never be profitably produced permanently except by farmers, or their wives and children. He has watched so many large plants that went into everlasting smash, that he claims that the future must always repeat the past. Wonder how he interprets the phenomena of the Laurelton Farms, with incubator capacity of 48,000 eggs at one time; the Pittsfield Poultry Farm Co., with 82,500 capacity; the Ingleside Hatchery, 36,000; the American Incubating Co., 48,000; the Southern Hatchery, 36,000; the California Mammoth Hatchery, 165,000, and the score or so of other large hatcheries as mentioned in A. P. J. January last?

The combined output of the large hatcheries in the country exceeds a half million of chicks per month, large numbers of which are raised at the establishments where hatched, and of those sold large numbers go to other strictly large scale poultry farms. Yet there are those who can see no farther than the farmer's mixed flock—a few hens roosting on plow handles by night and scratching up madam's flowers by day, their eggs going to the grocery, many of them bad to start with and the rest laid away to be ripened and pickled through with fumes of salt fish, onions, stale bacon, rancid butter, kerosene and Bull Durham. Farm poultry keeping is the most detestable branch of industry in the world. Considering the enormous quantity and abhorrent quality of eggs it sends to hapless consumers, it is simply industrial damnation.

Best Guarantee Ever

You trust us, we trust you. Eight chicks from every setting of eggs or duplicate entire setting free. No Ifs, Ands or Buts—Nothing said about fertility, testing on the tenth day, returning infertile eggs—no mention of Providence, the setting hen or incubator. Just a plain guarantee of

Good Results With White Leghorns.

Editor American Poultry Journal:

I have been very much interested in the articles on production cost of new-laid eggs. Although I cannot give actual cost each month, I can give the average cost per year. Labor cost is not considered, as I do the work myself. Most people going into the poultry business for a living, with small capital, would expect to do their own work, and I think my experience might interest some. It will be noted by the monthly cost items that some months I bought upwards of $60 worth of foods and supplies; while other months I have had expenses as low as $15.55. Some months I purchased two loads of grain and other months would buy but little; so it would be difficult to get at the actual cost each month. I think these figures are very conservative, as the cost of raising 200 pullets from 200 hens is included. From my experience I believe it would be an easy matter for one man to care for 2,000 laying hens and not work more than an average of seven hours a day. This report is for 200 S. C. White Leghorns:

Month. 1912.	No. eggs laid. Dozens.	Expenses for food, litter, egg crates, etc.
October	183	$64.05
November	182	19.95
December	175	18.35
1913.		
January	220	32.81
February	250	37.98
March	349	26.40
April	316	15.55
May	269	50.56
June	222	51.44
July	196	43.53
August	138	46.05
September	138	60.14
Total for year..	2,638 doz.	$466.81

From above figures I have dropped fractions of dozens. The average cost per dozen eggs for the year (not including my labor but including upkeep of stock) was a little less than 17⅔ cents per dozen.

The following is the recapitulation from the back of my September record, including receipts from sale of day-old chicks, eggs for hatching and all profits, except birds used on home table. I also sold some birds for breeders, which is included.

Recapitulation.

Profits per month for the year.	
October, 1912	$ 23.55
November, 1912	75.55
December, 1912	68.05
January, 1913	30.19
February, 1913	33.07
March, 1913	75.64
April, 1913	53.85
May, 1913	42.24
June, 1913	6.78
July, 1913	44.24
August, 1913	11.28
September, 1913	11.96
	$476.40
Increase in stock of 100 pullets at $1 each	100.00
Net profit for year	$576.40

Profit per hen for year, average, $2.88.
Average number of eggs per hen, 158.
Cost of food per hen, including raising young, $2.33.
Average price per dozen received for eggs, 31⅓ cents.
Food cost of eggs per dozen (including rearing chicks), 17⅔ cents.
Price received for hatching eggs, $5 per hundred. Day old chicks sold at 10 cents each, cockerels, $3, and hens $1.50.

All supplies, grain, grit, shells, litter, etc., bought of local dealers; nothing raised on farm. No deduction made from profits for any money invested in poultry equipment and stock, or for interest thereon, or for permanent equipment. About $750 invested in stock and equipment. I think this report will give a fair idea of what one can expect with good stock handled by a man who has a reasonable knowledge of the business. All market eggs were sold to a dealer in New York City.

Haddam, Conn. B. B. Everett.

(Note.—We are glad to have Mr. Everett's excellent report and hope more of our readers will make similar ones. Keep track of the grain and supplies used each month and figure costs from that, also keep an account of the labor in hours, whether your own or hired labor. Figure labor at not less than 25 cents an hour.—Ed. A. P. J.)

COMPARISON OF TWO EGG-LAYING CONTESTS.

Totals and Average Yield per Hen for First Thirteen Weeks Ending Jan. 30, 1914, in the North American and the Storrs Competitions.

By Prince T. Woods, M. D.

JUST how much is being added to the store of poultry knowledge by the big laying contests appears to be a problem not unlike the famous query: "How old is Ann?" Last year's results compared with work thus far in this year's contests present many contradictions. Comparison of the two big Eastern contests shows surprising differences, which the reports do not account for. Taking the contests as a whole, the lesson taught would seem to be that some hens in all varieties lay well, that some are exceptionally good layers and some lay poorly, or not at all. Among our veterans in poultry culture, both H. H. Stoddard and I. K. Felch have stated time and time again that all varieties have their exceptionally fecund individuals. Mr. Felch reported a non-trap-nested Light Brahma that made a record of 313 eggs in 333 days in 1876. W. D. Crowell's trap-nested Barred Plymouth Rock made a record of 292 eggs in 365 days, ending September 28, 1913. Prof. James Dryden's grade White Leghorn, also trap-nested, is reported as producing 303 eggs in 365 days, ending November 12, 1913. In fact, for nearly forty years there have been hens galore, of many varieties, for which egg records above 200 per year have been claimed. But to date we have no really satisfactory records by which to compare the egg laying ability of the various varieties and breeds of poultry.

Mr. Felch says: "I do not care what the breed is—it is care that brings the eggs." Taking the word "care" in its broadest application, we believe that Mr. Felch is right. Any man possessed of a reasonable amount of common-hen sense, and a liking for poultry, can take fowls of almost any variety and, with good care and management, get a first class, satisfactory egg yield and a fair proportion of individuals with exceptional fecundity. The whole secret is in the man behind the hen. If he knows how to select, breed, care for and manage layers, he'll get eggs.

The North American International Egg-Laying Competition is being held at Thorndale, Pa., this year. The birds are housed five hens in a pen and there are 500 hens in the contest. The Storrs Agricultural Experiment Station Laying Contest is held at Storrs, Conn. In this contest there are 820 birds housed 10 hens in a pen. We have at hand the reports for the first thirteen weeks, ending January 30, 1914, for both contests. Singularly enough the 500 birds at Thorndale appear to be producing more eggs than the 820 at Storrs, and with single pens laying a good deal better in many cases. We wonder why?

The reports do not give much information except individual and pen egg records. We are told that "in each contest all the birds are trap-nested, fed the same ration and attended by expert poultrymen," yet, taking the whole lot of hens in each case, the Thorndale birds are producing almost twice as many eggs per hen as those at Storrs. Storrs has made no report concerning feeding and handling. Thorndale reports birds in pink of condition but getting no supplied green food, except such as is to be had in the well sodded runs during an exceptionally mild winter. We would be glad to have more detailed information from both contests; if those in charge are getting new and valuable information from handling these several varieties side by side, we hope they will keep us posted.

The following table compares the size of flocks, the total egg yield for the first thirteen weeks of the contest, and the average egg yield per hen to January 30, 1914, in both competitions:

Comparison Table, Both Contests, for Thirteen Weeks' Record.

	—North American Contest—			——Storrs Contest——

"Hens"	..	..	..	50	570	11.4

Even a cursory glance at above comparison table will convince anyone familiar with poultry that there must be something the matter at Storrs, also that some varieties are represented by very poor specimens, are sadly out of condition, or are not properly handled. The difference may, in part, be due to the strains from which the birds were bred, but there certainly is no such difference in the fecundity of the several varieties where all specimens are equally well selected, well bred, well cared for, and well conditioned. More details, please.

Massachusetts Egg Farm Questions.

Q. (1) I have been interested in poultry for a number of years and as my boyhood was spent in Massachusetts I have been considering taking up the poultry business there and am seeking information. What are the essential qualifications of a successful poultryman?

A. (1) Hen sense. The ability to recognize poultry qualities and poultry values, to sense conditions of poultry comfort and productivity, to be able to SEE a hen; not only in health and constitutional vigor, but in any departure from normal, and to note both individual and flock characteristics. Capacity for painstaking work and plenty of push, pluck and perseverance are also essentials. So is a keen power of observation, a quick grasp of details, ability to know what to "let slide" and what must not be neglected; efficiency that will cover these things without waste of energy and labor and that will avoid wasting time on work that does not count for progress and profit. A liking for the business is an asset but not an essential.

Q. (2) What should be the average yearly income from 2,000 laying fowl catering to the Boston egg market? I mean gross income.

A. (2) $7,200.

Q. (3) Would $2.10 per year per hen cover the cost of feed only for a farm of 2,000 fowls, or should it be less where one could buy in quantities?

A. (3) All food considered, it will average about that. Wholesale buying will effect a small saving. Unless you do a grain business as a side line, the handling and storage of wholesale stocks of grain is a considerable item at certain seasons particularly.

Q. (4) Would a daily average per year of 40 per cent be too much to expect in eggs from a farm of 2,000 fowl?

A. (4) To figure daily average production will mislead you. The daily yield will vary at different seasons of the year and with the condition of your flock and the age of your stock birds. In flush season you may get a 60 to 65 per cent egg yield, and in seasons of scarcity you will be doing well to get a 20 per cent yield, and are likely to fall below that. It is a well selected and well cared for flock of 2,000 layers that will yield an average of twelve dozen eggs per hen for the year.

Q. (5) Would 36 cents per dozen be an average price per year for eggs sold on the Boston market?

A. (5) The average price for a number of years has been 29 to 30 cents per dozen in open market for best quality new laid eggs. Private trade averages 35 to 40 cents per dozen for the year, but it takes time to establish a private trade and it takes quality and strict attention to business to hold it.

Q. (6) Could the owner and one man run a poultry farm of 2,000 fowl as it should be run?

A. (6) Yes, if the owner knows his business and has had practical experience in handling 2,000 fowl. Experience with backyard flocks of from a dozen to fifty hens does not count for much on an egg farm.

Q. (7) Could a man with a capital of $7,000 make a proper start in the poultry business in Massachusetts?

Winnipeg, Man. R. R. K.

A. (7) He could, but should not put much of it into land, building and stock at the start, unless he has more capital to draw on for running expenses until well established. Grain and supplies are usually sold for spot cash and in quantity come with sight draft attached to bill of lading. The cost of labor and living expenses until the plant is established must be considered. Pullets will have to be grown to replace the culled out adult stock. Usually the first two years are pretty much all expense and little income. If you are experienced, $7,000 capital wisely invested should return you as good interest as it would in any other safe and legitimate busi-

City Small Yard Disinfection.

Q. Living in a city I have had to keep my poultry confined in a very small yard. In damp and wet weather the odor is quite bad. What is the best method to disinfect? E. E. W.

A. Good care would have prevented yard from getting in such condition. In dry weather such yards should be scraped and swept out frequently and the scrapings used for the garden or flower beds. New soil should be added now and then. After scraping, deep spading and sowing with oats is a good plan.

With your yards in present foul condition, confine your fowls to the poultry house. Scrape off top soil of yard and use it to manure lawn, flower beds and garden. Then top dress the yard with a good heavy coat of pulverized air-slaked lime. Let it rest until all frost is out of the ground in the spring. Keep the hens in the house; they will be better off there. When ground thaws and is dry enough to work, use a good garden spade and turn the earth over well, working the lime dressing into the soil as deep as you can go with the spade. With fork and rake work the soil up fine. The oftener you stir it up the better. As soon as weather is warm enough, sow the whole yard to oats. When the sprouts are well out of the ground, let the hens have the yard again. After that keep the yard clean by frequent scraping and sweeping. When possible always scrape and sweep the run before a heavy rain threatens. The rain will help finish the work started by scraping and sweeping. Rain in a foul small yard only makes a bad matter worse. Any small yard or intensive plan of poultry keeping requires eternal vigilance to keep the soil sweet.

Slate or Gray in Black Minorca Plumage.

Q. Last spring I sent to two breeders in different states for sittings of S. C. Black Minorca eggs. Had good hatches and have some beautiful birds as regards type, combs, carriage, eyes, etc., but almost every one, from both places, has slate or gray in the feathers of wings, a few have this in body plumage and two or three have it in tails.

Is this a defect? Is it common? Have been told it will disappear after the first molt. Is that correct? Does the fault, if it is such, disqualify? If I've started with poor stock I want to discard them, but dislike much to do so, for almost every pullet is laying.

Cameron, Ill. P. T. B.

A. We wouldn't worry about it. It is a quite common minor defect and often found in young birds before the first molt. It will probably disappear after the molt. It is not a disqualification. It takes pure white in any part of the plumage, extending more than one-half inch, or two or more feathers tipped or edged with positive white to disqualify. If any of the birds show up positive white in plumage after molt it will be time enough to discard them.

We would breed them and try them out this season. From your description we should judge that you have obtained from the sittings a good percentage of excellent birds. Mate them up well and you should get some very satisfactory results. Would prefer several small matings if you can possibly manage to pen them separately. If you have a good typed, good sized, solid black pair or trio would make a special mating of them. Leg band your breeders, trap nest them if you can conveniently and so know the dams and sires of the best of this season's chicks. In any event mark the chicks from each mating for positive identification. You want lustrous black in the surface plumage with a good greenish sheen. The undercolor should be black or slate. If you can, it would be a good plan to make a mating from each breeder's stock and one or more where both strains are represented in the mating and note the results. We believe you have a good foundation to start with, for health, type and size are important factors.

Pear-Shaped Egg.

Q. Have a flock of Ancona pullets, May hatched, which started laying about the 15th of November, and have been doing fairly well ever since. Have twenty pullets and a cockerel in a house 8x10, open front. Today one of the pullets laid an egg the shape of a pear about 1¾ inches long and very rough about the middle. Can you tell me the cause? I feed them a commercial scratch grain and chowder, table scraps, have grit, shell, charcoal and fresh water before them all the time; for green food give them lettuce, celery, apple and potato peelings, etc. Would my feeding have anything to do with the egg? House is kept clean, use patent litter, have nests hung on the wall. E. P. McW.

A. Any slight temporary abnormality

Madison Square Garden, New York, Champion

White Plymouth Rocks

WIN ALL HONORS AT THE NATIONAL SHOW
Held at Washington, D. C., December, 1913

Their record is unbeatable, like their superior quality. At this great National Exhibit they won Cock 1-2, Hen 1-2, Cockerel 1-2, Pullet 1-2, Pen 1 and all Specials. **At Williamsport** this season they again made their second great record, and at Cleveland, Ohio, Chicago, Ill., Boston, Mass., Philadelphia, Pa., they have proven their quality and won highest awards and honors over all, including six Championship Specials for Best Bird at these great shows.

Remember This Champion Line made its best records at America's Greatest Show, **Madison Square Garden, New York. They are now better than ever.** We have a great line of stock to select and fill orders with. They have the best of breeding quality and will give absolute satisfaction. Write for my **Special Sales List of Stock.**

Eggs for Hatching from selected matings, made on quality to produce quality. My circular and full particulars for the asking. Write me.

WEBSTER FARM, Box A, GIRARD, PENN.

Lichtenwalter's Quality

Buff Plymouth Rocks

For years they have won at the prominent shows, East and West, more prizes than any other line. They have the quality to win and to breed winners. Let me know your wants—I can please you.

Eggs for Hatching: For this year I have made but few matings. They are the best I have ever had, and from which I will sell hatching eggs without reserve. Circular and Mating List for the asking.

E. A. LICHTENWALTER, Box A, GIRARD, PENN.

of the egg duct might result in an egg such as you describe. Cause is difficult to locate. Unless the pullet habitually lays abnormal eggs would not pay any attention to it. If she lays a number of abnormal eggs and few normal ones, would kill and dress her for the table. When the egg organs get out of normal working order it seldom pays to attempt treatment.

Pullets as Sitters.

Q. (1) Will pullets do to set in the spring? Will they get broody as early as yearlings? Are they as good or as persistent as the hens?

A. (1) Either pullets or yearlings that have been laying all fall and winter are more apt to come broody early in spring than those which came into laying later. The time and frequency of broodiness varies with the individual specimen. There is no fixed rule that you can go by. Full feeding and nests full of eggs tend to promote broodiness. Pullets are seldom as reliable sitters as yearlings, but there are exceptions. Some pullets make better mothers than some yearlings, and vice versa.

Q. (2) Will March hatched pullets of American class be apt to molt in the fall? Are early hatched birds liable to molt? R. B.

Sheldon, Iowa.

A. (2) March hatched stock should not molt in fall if well handled. Management, feeding, general care, the particular season, and manner and time of shifting quarters of the flocks are all factors which have an influence on molt. We have wintered February pullets without a molt and have had May hatched stock molt in fall. If you want fall and winter layers you want early hatched pullets, and March hatched birds are none too early. February chicks are liable to molt in fall.

Feeding Pop Corn.

Q. (1) Is popped pop corn as good as field corn to keep a chicken warm when fed as an afternoon feed?

A. (1) Waste popped pop corn from a pop corn factory might be used for poultry feeding if the birds take kindly to it. The best way to feed corn is raw and whole. Pop corn with round kernels makes a good poultry food, but the sharp-pointed sorts are not usually well relished. The small, hard kernel flint corns are usually better for poultry than the large softer dent sorts. So far as warmth goes, keep the hens well fed on a good variety of food and they will keep warm. All food helps to make heat.

Q. (2) Does bread equal wheat or should wheat bran be mixed with it, and how much?

A. (2) Stale bread is all right as a variety food if not too heavily fed. Feed plain or moistened with milk or water. Mix with equal bulk of bran if you wish. White bread does not contain all of the food value of whole wheat.

Q. (3) In a 6x6x6 foot coop with 20 chickens how much opening should be left at night during winter?

Evanston, Ill. R. A. F.

A. (3) About 4 square feet in middle of front.

Mating Columbian Wyandottes.

Q. What relationship do black primaries in the male have to dark undercolor in Columbian Wyandottes, and will these be handed down regardless of undercolor? In mating Columbian Wyandottes for show purposes is it desirable to mate a little darker birds than the desired results? A. A. B.

Selby, S. Dak.

A. Dark undercolor is essential to good black markings. We would expect to find better surface color, both white and black, with dark undercolor that was bluish-white or bluish-gray. White undercolor does not appear to us to be compatible with sharp contrasty black and white markings. Would want primaries in male to be rich strong black with white edging on lower edge. White undercolor will bring cream and brassiness into the surface white.

C. L. Patterson, Barberton, Ohio, in recommendations for mating Columbian Wyandottes says:

"To produce exhibition males: Se-

BRADLEY BROTHERS
154 Main St. Makanda, Illinois

lect a cock of best type and stamina. In color would prefer one a trifle lighter than the strict Standard requirements, but should be clearly defined in hackle and deep laced; back clear, strength of undercolor limited. Mate with females darker than exhibition, with plenty of bluish slate undercolor. Surface clear and smooth, visible white finish. Undercolor might be strong enough to be exposed beneath body fluff and thighs. This produces a large percentage of richly colored specimens white in back.

"To produce exhibition females: Male should be unusually highly colored throughout and carrying plenty of undercolor; clear metallic hackle feathers, abundant and long flowing. Should be striped on saddle and with laced tail coverts; hocks clear of dark tipped feathers if possible. Mate with females of exhibition color, verging to a lighter shade, varying in direct proportion to male of the mating. Under-fluff should not be exposed and all portions of body plumage a clear white finish. Marbled wing flights are safe to carry consistent with a fair color in hackle."

We would be glad to have other Columbian Wyandotte breeders give details of matings and to have report of experience with single matings.

Egg Production Cost in California.

Editor American Poultry Journal:

Having been much interested in your articles on the production cost of eggs, I had thought I would write to you, but it slipped my mind until recalled by the excellent article by Mr. Jones, in the January issue of American Poultry Journal. Perhaps some figures, showing production cost and selling price here on the Pacific Coast, might prove interesting.

On January 1, 1910, I started in the chicken business in a small way in my present location, having at the beginning 130 White Leghorn hens. Since that time I have gradually increased my flock until I have at the present time about 1,500 hens—all White Leghorns.

From the first I have kept accurate records of all transactions, for, as I proposed to make a living for myself and my family, I felt that it was absolutely necessary for me to know just where I stood and whether I was keeping the chickens, or they were keeping me. After four years' experience I want to say that keeping accurate accounts is a very important part of the poultryman's work. As Mr. Jones truly says, it does not take much to shift the balance from the profit to the loss side.

These figures are not submitted to show how much money there is in the chicken business in California (I fear they would be a dismal failure if that was my object), but rather to show what it actually costs me to produce a dozen eggs at different seasons of the year and what these eggs actually bring me in the market.

The figures given cover all eggs sold or consumed and the prices received for them. I incubate from 10,000 to 15,000 eggs each year and these are figured at average price for the month in which they are placed in the machines. Besides hatching my own stock I have a nice little trade in baby chicks, which helps increase the earnings of my plant. I figure that I can bring a pullet up to laying age for what I can sell an old hen for on the market. Cockerels and cull pullets just about pay for raising.

The first year my 130 hens laid 140 eggs apiece, average. Since that I have not been able to do so well, making an average for the four years of about 120 eggs per hen per year. I realize that this is a low average, but I am telling you what I have done and not what I would like to do.

My time has been figured at fifty dollars a month, which is about what I could probably earn at such work. For the last two years I have given practically all of my time to work on my poultry plant. The first two years I figured my labor at half time. During the last year I have hired some additional help and this is figured at just what it has cost. No account is taken in the figures here given of the interest on my investment or of the upkeep of the

MONMOUTH FARMS

plant, as this must come out of the profits.

I am submitting two groups of figures, one being for the year 1913 and the other being an average for the four years. The fact that the cost figures for 1913 are rather better than those for the four years leads me to hope that I am making progress.

I figure the cost of food consumed at $1.50 a hen per year, so ten dozen eggs per hen, most of which are laid when eggs are cheap, do not leave a very wide margin of profit.

The Oak Grove Ranch,
Levi French, Proprietor.
Oakdale, Calif.

[Note.—We are very glad to have Mr. French's carefully prepared report of his experience with production cost of eggs. We hope to hear from others who have kept careful records and we want all of our readers to keep an account of cost for 1914. Read the above report, read that of Mr. Jones in the January issue and other articles on production cost. There can be no question about it, the selling price of new laid eggs has been too low for a long time. The man who is producing first quality new-laid eggs is not getting and has not been getting a fair price for his product. We have been fed to surfeit on paper profits figured by dreamers and by men who figure in hatching eggs at long prices, and who take no account of costs other than food fed the stock. Let's have less "wild-cat" profit stories and more genuine reports of actual costs and actual returns from poultry plants, large and small, that cater to the market for table eggs and poultry. Let's get together and put the price of first quality new-laid eggs where it ought to be. Five cents per egg the year around is not too much for best quality, large, heavy, new-laid eggs, and other eggs in proportion. Value considered, that is a retail price for eggs that is very fair to the consumer. The price of doubtful quality, stale farm eggs from scavenger flocks ought not to regulate the price of new-laid eggs from well-cared-for, well-fed flocks. Get the price of good eggs up where it belongs and keep it up. Mr. French, in a personal letter, tells us that these returns are a faithful report, but not what he had hoped for when he began, but he is "going to keep trying." He is trying out the parcels post as means of getting closer to the consumer, but can't say yet whether it will prove satisfactory or not. We hope he will "keep trying" and will continue to report results and we believe he is steering a good course toward success. It is all well enough for sensationalists to rave over 300 egg hens, but even Uncle Sam's experts have difficulty in getting whole flocks of 12-dozen eggers. We have had yarns about 300 egg hens pretty regularly for a good many years. As far back as 1876 an affidavit was made for a Brahma hen record of 313 eggs in 333 days, but this hen was not trap-nested and we never got any satisfactory report of this hen's performance or how the account of her production was kept, although several times we tried to get the facts. We don't doubt there are 200 and perhaps 300 egg individual hens in many flocks, but experience and observation show that with large flocks the 10-dozen and the 12-dozen eggers are pretty good hens and much better than the general run of farm hens. It isn't fair to figure egg production costs on the performance and food consumption of 200 and 300 egg hens. We will welcome carefully kept records of egg yield and of cost of production, also cost of rearing chickens from shell to maturity. Send in the facts and work for the "five-cent new-laid egg."—Editor A. P. J.]

Can Exhibition Specimens Be Produced by Large Flock Matings?

Q. I am going back to my old home in Texas and intend to raise poultry on a rented farm. I intend to have portable houses and yards. Now, it seems customary for breeders to mate up pens of a few hens with one cock, some having ten or more pens. I raise Barred and White Plymouth Rocks and I want to know if one can, by using only high class males, and selecting hens that come near the Standard in size, shape and barring, keep up a high class of quality and keep one or more males with large flocks of hens. I want to raise stock good enough to supply a trade for thoroughbred stock and get some extra good ones to show. J. E. W.

Lombard, Ill.

A. If you want to get the maximum number of good birds and the best exhibition quality you will find it necessary to breed small matings. Some of the best results have been obtained with pairs, trios or small pens, and in working for exhibition quality few ever mate more than ten or a dozen females with one male. If, however, all you want is nice, fairly uniform birds, with now and then an extra good one, good enough to show, you can get that by using large flocks of breeders with several males and

BLUE ORPINGTONS
Lehne's Blue Orpingtons Win Highest Honors at Ohio State Show, Columbus, O., Jan. 1914. Winning all firsts on single birds and Pen. Eggs from fine matings, $5.00 per 15. Circulars. Finest imported blood of this grand breed.
ADOLPH LEHNE - - MECHANICSBURG, OHIO

Clemans' Columbian Rocks
Win highest honors at Ohio State Show, Columbus, O. Jan. 1914, taking all first prizes on single birds and pen. Grand matings of heavy boned typical Rock stock. Eggs $3.00 to $5.00 per setting. Circulars.
F. M. Clemans, Mechanicsburg, Ohio

BLUE ORPINGTONS :: SILVER CAMPINES

These are the two breeds in which there is the most money, and for which there is the greatest demand. Why? Because of their wonderful laying qualities and their easiness to raise in any climate. At England's two greatest shows, viz: The Dairy and International Crystal Palace my wins in Blue Orpingtons were the following: **At the Crystal Palace Show,** 3rd Cock, 2nd and 3rd Cockerel and 2nd Pullet. **At the great Dairy Show** I won first in a class of 34 entries, the biggest class ever known in this variety. Also 3rd and 5th. **At Madison Square Garden, N. Y.,** 3rd Cock, 1st and 3rd Cockerel, 3rd Pullet, 4th Pen. Sixty-eight per cent of the winning blues at above show emanate from my yards. In Silver Campines I won 3rd Cockerel and 4th Pullet, and at Madison Square Garden 2nd Pullet, 5th Hen, 5th Pen. I can ship by return high-class breeding Blue Orpingtons and Campines at following prices. Pullets, $15, $20 and $25. Cockerels, $25, $30 and $40 each. Live delivery guaranteed in New York.

EGGS. Blue Orpingtons $17.50 (best in the world) $15 and $10 a sitting. Campines, $10 and $5 a sitting (15).

MAX DE BATHE, HARTLEY COURT, READING, ENGLAND
Vice President English Poultry Club.

growing large flocks; that is, you can get it if you use breeding stock that is well mated and has the quality in it. We have visited a number of utility plants where 100 and 150 hens are kept in one flock with from 5 to 7 males and where only good Standard quality birds are used in the matings. We have found that the progeny from such flocks runs very uniform as a rule in size, looks well "on the ground," averages very well in quality, but the percentage that "handle" well enough to show is not large; though we have seen some picked specimens from such flocks that made a very creditable showing in good company. It would be a poor practical flock that, mated as above, would not show a fair percentage of winners. The trouble with many big flock matings is that very little attention is given to mating for shape, type and color; quantity is generally what the utility man works for. We believe it would pay to do more work in selecting breeders with a view to getting better Standard quality, greater uniformity in size and type, and better performance. We will probably have to stick to small special matings for best results in Standard perfection, but with care much can be accomplished with big flocks.

If you are locating in any mild section of Texas you will not need much in the way of portable houses except roofed open-front shelters. Use portable shelters and yards and alternate crops and poultry for best results.

Wants Narrow Sections in Open-Front House.

Q.—How narrow can I have each section of a Woods' open-front poultry house and retain the advantages? I want to put up a three-section house following the general plan of the 20x20 ft. two-section house described in June, 1911, A. P. J. and in Year Book, but I do not want to build thirty feet long. Would 8x18 ft. sections work all right? What size would you recommend? Would it be necessary to run the solid part of the partition near the front?

St. Paul, Minn. F. E.

A.—8 ft.x18 ft. sections in a three-section building will work all right if you keep the height same as in the 20x20 building and use two solid partitions between sections that run from floor to roof from rear wall about nine feet toward the front. Use good sized six-light half sash in the monitor top, as large as you can get in comfortably, so that the middle sections will be well lighted in rear. We prefer dimensions 10x16 ft. or 20x20 ft. Would not make sections narrower than 8 ft.

Wants 75 Ft. Open-Front House.

Q.—Have the year book and am interested in poultry house construction. Am about building a house 75 ft. long and want it as near up-to-date as possible. Never saw a house on the Woods' plan, but it seems to me that being 4½ ft. high in front all the cleaning out would have to be done from the ends, which in a long house would be considerable of a job. Again, being so low would the sun shine very far back in the house? Would it be light enough in a 20 ft. house? Of course sun and light would come in the upper windows. Would like more information about this style of house. J. D. E.

Middleburg, Md.

A. A great many Woods' open front houses have been built, both single

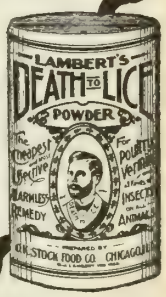
The Best Way

To Get Rid of Lice

on Poultry is to dust **them** separately with a good **lice killing powder.** Hold the fowl by the legs, head downward, so that its feathers will be open and the powder can penetrate through to the skin, especially around the vent and under the wings. **The best time** to do this is at night when the birds are at roost. The lice and mites are then on their job. It takes only a short time to dust an entire flock and the powder "works while you sleep." **The best lice killer** to use—

30 Years the Universal Favorite

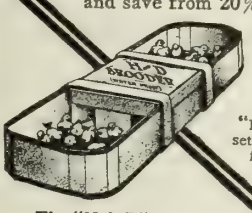


The Old Reliable

LAMBERT'S DEATH to LICE

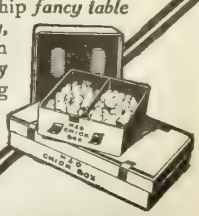
Its effect is immediate and it does not injure eggs, hens or chicks, neither will it soil or discolor the finest plumage. It is the most reliable powder and a sure Profit Payer.

If not at your Dealers, send 10c for sample. Larger sizes, 25c, 50c and $1.00. Latest Pocketbook of Pointers (invaluable to all poultry raisers) mailed for 2c stamp.



O. K. STOCK FOOD CO., 501 Traders Bldg., Chicago, Ill.

"H & D" Shipping Boxes are neat, strong, light and compact. Made of double faced corrugated jute board, waterproof, sanitary, will not buckle or crush. Insure contents reaching purchaser in good condition and create a favorable "quality" impression. "H & D" Boxes are designed to meet all requirements of



Parcel Post, Express and Freight Shipments

and save from 20% to 50% on transportation charges. Ship *fancy table eggs* or *eggs for hatching, dressed poultry, vegetables, fruit* or *day old chicks* in *"H & D" Boxes.* There's a specially designed "H & D" box to meet shipping requirements of any product.

"H & D" Boxes are delivered knocked-down—easily set-up, packed and sealed for shipping. Write today for FREE illustrated booklet which tells how to pack for parcel post, express or freight.

The "H & D" Fireless Brooder

The "H & D" Chick Box

The "H & D" Brooder is built on the latest approved principles of ventilation. Made of strong corrugated jute board, it is non-absorbent, germ free, water-proof and sanitary. No cold corners, spiral felt hover mothers chicks like a hen. Double wall construction affords protection against heat and cold. Easy to keep clean. Cheap in price. Write for illustrated brooder booklet.

Is sanitary, simple and safe for shipping day old chicks by express, long or short distances. Patent ventilating device assures plenty of fresh air always. Separate compartments—no crowding, trampling or smothering of chicks. Can be sealed to prevent tampering. Strong and firm but compact, light and convenient to handle. Made in standard sizes.

Write today for free illustrated circulars and price lists.

THE HINDE & DAUCH PAPER CO. **Dept. B** **Sandusky, Ohio.**

colony type and long houses. U. R. Fishel and E. B. Thompson both use and recommend the Woods open front house. Complete information for building open-front poultry houses is given in our book, "Open air Poultry Houses for All Climates." Chicago office will furnish this book postpaid for 75 cents a copy.

Better plan to build your house eighty feet long instead of seventy-five. Use the plan of the Woods 20x20 ft. house and make four sections. We find that we get plenty of sunlight in the 20x20 ft. house and we have none of them in different locations. If the wire front is made on frames to be bolted or hooked on, the fronts can be quickly removed for cleaning in a long house and the front section is not so low that there would be difficulty in throwing litter, etc., out of front. In a 20x20 there is plenty of light in all sections. With a long house it might be well to slope the half-monitor top out a little at base and so set in the windows at an angle that will throw winter sun directly on floor in back part of house. In all colony buildings we prefer the monitor as recommended in the book and we get an abundance of light, air and sun in the building.

Greenish Spots on Wyandotte Legs.

Q. Do greenish spots on legs of Silver Wyandotte females disqualify them for show purposes?

Athens, Mich. C. S.

A. Standard disqualifies for "shanks other than yellow." It is up to the judge to decide what that means. Greenish spots on legs are a defect, but if only faintly tinted or few in number might not be construed as "other than yellow" shanks if balance of shanks are good yellow color. We have noted greenish mottling on legs of quite a few ribbon winners and presume it was counted to be only a greenish-yellow tint. Personally we like and prefer good solid clean yellow legs free from foreign color, except such red as shows at outer sides in good red-blooded males.

Feeding Cut Green Bone.

Q. 1. I have heard that feeding cut green bone decreases hatching fertility; does it?

A. (1) Feeding cut green bone will not affect fertility unless it is so fed that the birds get out of condition. Green bone when cut spoils very quickly. It should not be fed when spoiled. If fed too heavily or fed when heated or spoiled it will cause indigestion and diarrhoea, and fowls out of condition from such cause cannot be expected to produce hatchable eggs. Fed sparingly and always fed when freshly cut, good sweet green beef bones are good food. There is danger from spoiled bones and bones from diseased or parasite infested animals.

Q. (2) Does feeding sprouted oats decrease or increase hatching fertility?

Deerfield, Wis. A. S.

A. (2) An abundance of fresh raw greens helps toward better fertility. Sprouted oats are, in part, fresh raw greens, and, if not moldy, are excellent food to help keep breeding stock in best breeding condition.

Abscess on Neck.

Q. One of my White Leghorns has a round lump on back of neck like a boil. What can I do for it?

A. Apply a poultice of hot antiphlogistine and bind it on. Renew in 24 hours. You will then probably find that the abcess has headed and can open and empty it of pus. Cleanse the wound thoroughly with a solution of one teaspoonful of creolin in half a pint of water. Then let it alone. Keep the bird where he will not get dirt into the sore until it heals.

Preventing Mold in Sprouted Oats.

Q. I have trouble with the roots of sprouted oats becoming moldy and I should judge unfit for food. I read in a poultry book that the way to overcome this molding was to sterilize the oats before placing them in the sprouting frame. The sterilizing solution consists of one pint of formalin to 30 gallons of water. One gallon of this solution is said to be sufficient to sterilize a bushel of oats. The solution is slowly sprinkled over the oats turning them in the meantime until all are wet with liquid; then cover the heap with bags for 12 hours to allow the solution to thoroughly disinfect the grain. After twelve hours spread and dry the grain and then bag it in sterilized bags. I have been a little reluctant to try this method for the reason that formalin is a poison and I would like your opinion.

Warrens, Ohio. G. F. B.

A. Formalin solution has been used for disinfecting grain before sprouting but reports made to us have not been satisfactory as the grain molded during sprouting just the same. We don't recommend that method. Have a few extra trays for your grain sprouter. When you take out a lot of sprouted oats wash the tray in hot soapsuds, rinse well and dry in the sun. Keep the trays clean and wash and dry them often. Wash the oats in warm soapy water first, then rinse well twice in

Don't Take Chances with Eggs
Buy Day Old Chicks

It's the only sure way to get a perfect hatch every time. You take absolutely no chances whatever. You can't lose. We absolutely guarantee safe arrival and full count of strong, healthy chicks at destination and entire satisfaction to our customers no matter how great the distance. Our chicks are noted for their vitality and stamina to live and grow and bring handsome profits to their owners.

Michigan Poultry Farm
Single Comb White Leghorns

are bred especially for heavy egg production and good size. They represent the most popular breed in existence. Our birds are all of vigorous stock, raised in open-air houses on dry foods and grow to good size. They are very prolific layers of large white eggs.

Anyone Can Become a Successful Poultryman at Little Expense

A few dollars for coops and about twenty-five Michigan Poultry Farm day-old chicks start anyone on the road to a successful poultry grower's career. We have supplied many of the largest and most successful plants in the country with foundation stock. The excellent quality of our birds always brings you top-notch prices for both chicks and eggs.

Our Customers Are Satisfied Customers. READ WHAT THEY SAY!

North Branch, Mich., April 3, 1913
Michigan Poultry Farm, Lansing, Mich.
Gentlemen:—
I received the chicks yesterday noon. They were all alive and very smart. They are a very nice lot of chicks. Thanking you for same, I am,
Yours truly, M. E. Crawford

Washington, W. Va., May 17, 1913
R. F. D. No. 1.
Michigan Poultry Farm, Lansing, Mich.
Gentlemen:—
The chicks arrived Wednesday, 15th, O. K. They are a husky bunch of chicks. I am well pleased with them. Yours truly, Guy Pitts

Beginning March 1st We Will Ship 5,000 Chicks Per Week

Last spring we were swamped with orders. We could nowhere near meet the demand. And now, with a capacity of 5000 chicks a week, orders are already coming in at a rate that is bound to swamp us again before the end of the season. We fill our orders by the "first come first served" plan. It will cost you nothing to have a reservation order on our books. We don't ask you for a cent until time to ship the chicks. But we urge you to book your order early. No order too big for us to handle.

Send Today for Large, Beautiful Catalog

Fully illustrated and brim full of most useful information for poultrymen. Gives prices and full description of our birds and methods of doing business. Send for copy today. It's free.

MICHIGAN POULTRY FARM
601 Willow St., *"Largest In the State"* LANSING, MICH.

clean water. Then put them to soak over night in clean water before placing in sprouting trays. Don't get the sprouting room too warm and keep it clean and free from dust. Feed the sprouted grain as soon as the green shoots are about an inch long. If you wash the grain, keep things clean and not too warm, and do not try to keep the sprouting oats too long you will not be bothered with mold.

Number of Laying Hens on One Acre.

Q. We have one acre of land on which we want to put a laying house. How many hens can we house comfortably on this lot? What size house, etc? F. & V.

A. You can house and yard 400 layers on one acre quite comfortably. If we were going to do it we would prefer four 20x20 ft. open-front houses. See book, "Open-air Poultry Houses for All Climates," advertised elsewhere in this journal.

Blindness in Chickens.

Q. What is the cause of my chickens going blind? They are about four months old. J. L. W.

Dublin, Miss.

A. May be conjunctivitis, catarrhal colds, irritation from insect bites or fumes of disinfectants or from disinfecting powders, or from dust. Remove the cause if you can locate it. Dip chicks' heads in solution of one teaspoonful of creolin in half a gallon of water and work eye lids open. If eyes are inflammed and lids full of pus—wash first with clean warm water, then with a medicine dropper drop a few drops of a 25 per cent solution of argyrol into the eyes. Repeat next day if necessary. Use only freshly prepared solution.

System Feeding.

Q. Am a subscriber to your paper and want a little straight information. I am a beginner but had good success the first year and a few ups and downs that come under the head of experience. My principal trouble has been to feed successfully after the birds were several weeks old. After trying several prepared foods and formulas for preparing them I stumbled upon "heneta," the panacea for all poultry feeders' troubles. Since last August I have fed "heneta" exactly as directed in every detail; but, for some reason unknown to me my results don't look quite like the kind described in their literature. My birds are healthy, free from lice, have wonderful appetites, have new, well-ventilated coops, get plenty of mangels and sprouted oats daily, but the egg output don't compare favorably with the feed bills. One coop of 120 April and May hatched White Leghorn pullets laid their first egg November 20. Two months are nearly gone and the average is as yet only about one dozen eggs per day. This week they have begun to eat eggs. It seems as though this number of well developed pullets should make a better showing. Do you know of any successful poultry farms that are using the "Heneta-Henola" system of feeding? If I had some reliable information it would make me more confident about continuing my experiment. R. C. W.

Fayette, O.

A. We have not visited any poultryman who is using the system referred to, nor have we had a report on it from anyone we know; neither have we tried it. An elevator and grain store near us sells a considerable amount of this product to small flock poultry keepers. We know nothing whatever about it from personal experience.

In our opinion you should be feeding a good beef scrap to your pullets, or some good fresh meat scraps, if you want eggs. See article on feeding entitled, "Give the Laying Hen a Chance," in December A. P. J.

FOR PARCEL POST AND EXPRESS SHIPMENTS

Use Rippley's Perfect Egg and Day Old Chick Boxes

Made of extra strong corrugated cardboard. Stand 5 men's weight. Cushion effect. Dead air cells keep out cold and heat. Chick boxes have correct ventilation. Glued tape seals boxes. Will deliver chicks or eggs 3,000 miles with safety, and eggs in hatchable condition. Satisfaction guaranteed or money returned. Put up in packages of 1 dozen. 25 cts. extra for each package broken. Sample box 25 size chick or one setting, egg 25c postpaid. Use RIPPLEY'S EGG CARTONS to ship—mail—eggs to city. Your name or farm printed in 1 color. Made of strong chip cardboard. Folds flat for shipment. 30 doz. can be packed in egg case.

130 EGG Mankato Incubator $7.25

SAVE one-half by buying the Mankato. It is sold direct from our factory to you and has behind it our binding guarantee and 18 years practical experience building and operating incubators and raising poultry. There's no incubator at any price that will give you better results—and it's results you want. It's the one high class hatcher that is MADE right and SOLD right.

No Better Incubators Made

Built of real California Red-wood in natural wood finish, three thicknesses of walls, asbestos lined, heavy pure copper hot water tank and boiler, perfect automatic regulator, correct ventilation, safety lamp, high nursery, high legs, tested thermometer, etc. Heavy, well insulated wall construction and special double heating system insures uniform temperature and highest per-cent hatches. All set up ready for use. Simple, sure, safe, handsome and most successful. Big factory output, quick shipments.

Brooders for 120 Chicks $2.50; for 240 Chicks $4.00 and up. Send today for our big new annual catalog and see the why of our low prices and how good the Mankato is made—it's free.

MANKATO INCUBATOR COMPANY, Box 768 MANKATO, MINN.

My Three Party Offer—
An Astonishing Money Saver

Let Me Mail It to You at Once

Your name and the name of two of your friends will bring you the most surprising incubator offer I have ever been able to make. I want *every* poultry keeper to know of the big profits possible with the Ideal Incubator. That's why I've planned this great offer. This year I am going to sell three hatchers where I formerly sold one. On three machines delivered freight paid to your station, I'll make an offer that is simply astonishing. Send me your name quick for the details of my plan.

Miller's Ideal Incubator

Made by the Man Who Knows—26 Years at It

If you can induce two more people anywhere to buy hatchers, here's an opportunity too good to miss. But if you only want to send me the names of possible buyers, send them in at once and I'll make a combination offer that will save money all around.

I Give an Unconditional Guarantee And Include All Extras

You get the "Ideal" all ready to start the hatch. I give you the best heating system—best regulator—handiest egg-tester, egg trays, thermometer and holder, etc. There are no extras to buy. And I prove with thousands of users that the "Ideal" is the top notch profit maker for the poultry keeper.

My Great Book "Poultry for Profit" FREE

Tells how the "Ideal" made poultry keepers successful—gives you suggestions and offers on good poultry houses—poultry supplies, etc., at low prices. Write for it—also get my three party money saving offer. Address

Partridge Wyandottes.

Breeders who have made exceptional records, who have done things worth while, are due to receive proper and worthy mention. The winnings of Chas. H. Wood, Worcester, Mass., at the late great M. S. Garden show, form a record of quality and merit and place him in the honored class of special accomplishments.

Back of this he has the stock and quality to feel proud of. His birds are in beautiful condition, wonderful evenness of color and markings, and of typical form—all combined make this line what it is.

His winnings at the late M. S. Garden, New York, Show were: Cock, 1st, 2d and 4th; hens, 2d; cockerels, 1st, 3d and 4th; pullets, 1st, 4th and 5th; pens, 1st and 3d; best display and specials—a win that is, we believe, a show record for this variety, and was won from the hottest kind of competition.

Mr. Wood has long been breeding these beauties. He is a stickler for shape and his line shows the grand work he has been doing. He is worthy of unbounded success.

Our readers interested in this variety, and many should be, had best write Mr. Wood for his list and for any desired information. His address is No. 715 State Mutual Building, Worcester, Mass.—H. P. Schwab.

Mr. Porter Elosser, Cumberland, Md.

That Black Langshans are more popular and all the rage is evident to those who have made the shows this season. At all we have found very large and strong classes, the best quality ever seen, which in itself proves the popular favor this worthy breed can claim. Mr. Elosser has made more and greater records than ever before, winning all the first and second prizes offered at Washington, D. C., and nearly all at Baltimore and other shows. At Frostburg, Md., he won first and second cock, first, second and third hen, first, second and third cockerel, first, second, third and fifth pullet, champion sweepstake specials for best cockerel in the show; also for best pullet and other specials.

Mr. Elosser's winnings are of particular value. He has bred for years and has a line of worth. Write him for particulars and mention A. P. J.—H. P. Schwab.

Always able to identify your birds? We know of a raiser of choice stock that sent two pens of birds to a recent poultry show and was returned therefor two pens of nondescripts, with one extra bird thrown in—evidently for good measure. Such mistakes would be impossible if "Moe's Self Locking Leg Bands" were used. Send for sample band and complete booklet today. Otis & Moe Manufacturing Co., Otis Building, Chicago, U. S. A.

Sixeas Remedies.

Are absolutely guaranteed to cure roup, canker, cholera, blackhead and white diarrhoea. They are remedies easily given in food or water and are endorsed by leading poultry breeders. All of these remedies are sold by the inventor, and he has so much faith in them that he guarantees them in every way. Write to him for circular and prices. Address Geo. Sixeas, New Castle, Va.

Kellerstrass White Orpingtons

ARE THE BIGGEST PAYERS BECAUSE THEY HAVE PROVEN TO BE

THE BIGGEST WINTER LAYERS

Kellerstrass Strain "Crystal" White Orpingtons

Are the **grandest utility** birds on record today, and as to their **fancy quality** they won first at Madison Square Garden, New York, 1905, 1906, 1908, 1909, 1910; also at Crystal Palace, London, England, and Chicago and Boston. If you need some birds to **improve your stock** or for the **show room** write us. We have them, and **the kind that win** as our past record shows. Stock for sale at all times. Remember, we are the **originators** of **"Crystal"** White Orpingtons, and breed only the one kind. We devote our whole time to this one breed. Eggs for hatching, write for prices. Send for our catalogue.

Eggs and Baby Chicks from Exhibition and Pedigree Matings

Buy eggs or baby chicks from us now and raise your *Exhibition and Breeding Birds* for this fall and winter. No one can furnish you the size and quality we can. *We are Specialists* in Barred Rocks, have bred them in line for twenty-three years, and when you think of *Best Barred Rocks* you naturally think of *POPE & POPE.*

Twenty grand matings for 1914. No utility matings. Our pens contain our winners of the *Chicago, Indianapolis, Memphis, Louisville, Knoxville, and Nashville Shows,* and when you buy eggs or baby chicks from these pens, you buy *the best there is in America today.*

Don't place order until you get our big catalogue and mating list. *You won't have to pay exorbitant prices when you send us order.* Write for catalogue No. 3.

POPE & POPE Box A, Louisville, Ky.

A Chicago Winner, Dec. 1912

Modern Brooding Equipment.

Since it has become so generally recognized that the greatest leak in the poultry industry is the heavy mortality of chicks during the brooding period, particular attention has been paid to this most important matter by leading practical poultrymen, investigators and manufacturers of poultry equipment. Probably the most notable improvement in brooding equipment which has been brought out as a result of this work is the Newtown Giant Colony Brooder, which is advertised regularly in these columns. From the moment of its introduction this appliance created greatest interest and its popularity has steadily increased because of its unusual merit. In the Newtown Giant Colony Brooder are combined the three great essentials demanded by the business poultryman: Economy, convenience and efficiency.

It is economical because the selling price is low; it does not require the erection of special buildings, but may be operated in any comfortable structure, as barn, colony house or poultry building; it is inexpensive to operate, since 8c worth of coal per day will furnish the necessary heat for a thousand chicks; it saves labor, because it is self-regulating, and the coal magazine requires filling but once in two to four days, according to weather; it is durable, being constructed entirely of cast iron and the highest quality of sheet iron; it has large capacity, the smaller size brooding any number of chicks up to 500 and the larger size any number to 1,500. Its points of convenience are many. Absolutely self-regulating and holds a large supply of fuel. You may confidently depend upon the machine to run smoothly and evenly, maintaining the proper temperature regardless of weather changes. Further, it may easily and quickly be moved from place to place as occasion demands. But economy and convenience may be regarded as secondary considerations. Efficiency is primary, and right here the Newtown excels. It raises the largest percentage of the strongest, healthiest chicks. The reason for this is: Unvarying temperature, ample ventilation, the absence of smoke and lamp fumes, plenty of space under the hover, all make for continuous chick comfort, which in turn means maximum results.

Every user of a brooder should investigate the merits of the Newtown Giant Colony Brooder. It is sold by dealers everywhere, who will gladly give demonstrations. If your dealer does not carry it, write The Newtown Giant Incubator Corporation, No. 21 Warsaw St., Harrisonburg, Virginia, for a brooder catalog.

Mr. Harlo J. Fiske, West Springfield, Mass.

We just have word that Mr. Fiske has moved his plant and birds from Sterlington, N. Y., to West Springfield, Mass., his old home place, where in future he hopes to breed and raise more of his famous "Skyland" S. C. White Leghorns.

Mr. Fiske and his line have been before the public many years and his record is one of exceptional credit, having won at M. S. Garden, New York; The New York Palace Show; Chicago, Boston, Buffalo, etc. At Boston this year, with only two pens entered, he won first and second.

His 1914 mating list is out, giving full information of his stock and is free for the asking. When writing please mention the A. P. J.—H. P. Schwab.

Single and Rose Comb R. I. Reds.

It is both pleasing and exciting to note the progress made by the breeders year by year. They are game, and whether they win or lose they come back again looking for more honors and more records.

For the last few years we have been busy keeping a line on the doing of the Schenley Heights Poultry Farms, Pittsburgh, Pa., for they have been making all the leading shows and to a special degree have been most successful.

This season more than ever they have reason to feel proud of their records made at Altoona's great fair, where they won the five first prizes in Single Combs. At the New York Palace, Philadelphia, M. S. Garden, New York, and at Pittsburgh their records stand out strong as absolute proof of quality.

Their latest victory at Pittsburgh was one of the best made and is as follows: In Single Combs—Cocks, 4th and 8th; cockerels, 1st, 4th, 7th and 8th; hens, 2d; pullets, 4th, 5th and 6th; old pen, 2d; young pen, 1st and 3d. In Rose Combs—Cocks, 2d and 4th; cockerels, 1st and 2d; hens, 1st; pullets, 1st and 2d; several cups and specials.

From this the reader can well imagine what this line of Reds is, exhibited as it has been at our best shows. Early and late it has made records at all worthy of approved and highest quality.

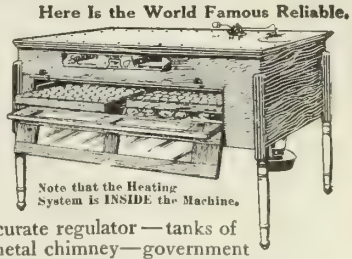
We lately paid a visit to these farms, which are close to Pittsburgh, and there saw close to 1,500 birds of both combs rounding into their best shape. Try as we may we could not pick any special feature. They are a very even lot, good in color, good in shape and markings of a very high class. Their breeding seems to be very even, which presages much for this line now and in the future.

With Mr. C. F. Rankin, the owner, we went over the old and young hens very carefully, and here again noted his famous winners of this and other years. Here again we handled his grand champion, which but a year ago won first prize cockerel at Philadelphia, Cleveland and Pittsburgh, and at each of these three shows won the sweepstake special for best cockerel in the show. We know of no bird living or dead that ever made a record like this. It stands out high and dry above any mark ever made. Today we consider this cock as good as ever and his breeding has been wonderful. Such stock and such

Smith's White Leghorns

Three Firsts at Chicago! First Pen, First Pullet and First Hen—three firsts out of a possible five—at Chicago, January, 1914, defeating (among others) three of the most prominent breeders in the Central States, proves the quality of my strain. Winners at Chicago, St. Louis and Indianapolis. Catalog free—send for it *today!* **Eugene C. Smith, 317 Galena Blvd., Aurora, Ill.**

I Will Save You Money With My 1914 Prices



DON'T take a chance this year with costly eggs in machines of unknown quality. Every hatchable egg which you lose means a loss of profit of at least 50c to you. No matter how big or how little a machine you want, I can save you money with the good old Reliable, with my 1914 prices.

Let me give you the facts. For over 32 years I have been building Incubators and Brooders. My incubator and brooder factory is the largest in the world. My enormous production enables me to make prices which you wouldn't believe possible if I printed them here, but without cutting quality in any detail. It's just common sense. The biggest production in the world means the biggest buying power, lowest prices on materials and labor, you get the benefit.

Get My Rock Bottom 1914 Prices on This Incubator

It has all the 1914 improvements; the incubator the experienced poultryman is buying all over the world. Here's an incubator that's made of absolutely the best materials from beginning to end. Thoroughly season 1, matched, beautiful, everlasting Redwood lumber is used in its construction. My double heating system is built right into the incubator. You can get at it in a second. The Reliable has an accurate regulator—tanks of cold-rolled builder's copper—metal chimney—government standard tested thermometer and all-metal safety lamp. No matter how cold the weather, you can absolutely depend on the Reliable. No worry—no trouble—no bother. It is guaranteed to hatch any egg that can be hatched—in any altitude. No machine can do more. Do you know of any other of which you can be so sure? Built in seven sizes. One is just your size. Get my prices. Don't buy until you do. Write tonight. Don't take a chance this year, you can't afford to.

Here Is the World Famous Reliable.

Note that the Heating System is INSIDE the Machine.

Reliable Brooders

are made of the same high-grade materials with the same workmanship and care as our famous incubators. Choice of either Hot Water or Hot Air heating. Made in four sizes—for 80, 120, 220 and 300 chicks. Send for detailed description and prices.

J. W. MYERS, President,
Reliable Incubator & Brooder Co.,
Box A-1
QUINCY, ILL.

quality is good forever and most reliable as breeders.

Mr. Rankin has a very select line of cockerels bred from his best to spare and can assure absolute satisfaction to all. He is a royal fancier and breeder and is most worthy of the success he has made.

Mr. Rankin also breeds Silver and Golden Campines, and with these also has made great records this year of the equal made by any breeder.

The plant is finely located and in charge of Mr. Young, who will welcome all visitors, and a trip to Pittsburgh can't be complete without a visit to these yards.—H. P. Schwab.

Success With Incubators.

There are still a lot of people in the belief that incubator hatched chicks are not as strong as those hatched under hens. Space will hardly permit us to enumerate the different reasons why this belief exists and why it is erroneous. We believe we can do more to eradicate this false belief by citing some facts accomplished with our "Successful" Incubators and Brooders.

Mr. W. Koch, of Bellingham, Wash., started three years ago with one of our hatching outfits and had such good success in hatching and raising the chicks that he now operates nine of our largest size incubators and brooders. Several of his neighbors have also ordered from one to six of these 312-egg size Successful Incubators. Mr. A. Kintlein of Hempstead, N. Y., last year secured one of our No. 5 Successful Incubators. A little while ago he favored us with an order for six of our No. 4—312-egg size Successful Incubators. Mr. Julius Wurst of Waterville, Minn., was quite skeptical about incubators and brooders; nevertheless he tried it by ordering last spring one of our No. 9—240-egg size machines, and in three hatches produced 610 strong chicks from 720 eggs and raised all but eight or ten of them. He also ordered additional Successful Incubators and Brooders. Mr. Henry Williams, Ledgewood, N. J., has had our 240-egg size incubator for two years and always hatched over 200 chickens, having the record hatches in his neighborhood. He wants two more of these machines. The Linwood Poultry Farms of Davenport, Ia., one of the largest egg farms in the Middle West, have used our Successful Incubators and Brooders exclusively and with such success that they have added more from year to year.

We could name dozens of poultry raisers who a few years ago started the poultry business with but one of our incubators and brooders and now operate from five to a dozen Successful machines. They had success from the very beginning both in hatching as well as in raising chicks; otherwise they would not have seen the need of adding more of these machines. "Successful" Incubators require little attention, are dependable and safe, economic in the consumption of oil and are simplicity itself in operating. The Des Moines Incubator Co., 1 Second St., Des Moines, Ia., will be glad to send you their 128-page catalog.

S. C. Black Minorcas at Pittsburg, Pa.

The S. C. Black Minorca Club held its annual meeting at Pittsburgh and brought out the largest and finest class of this variety we have ever seen in a show room. There were 32 cocks, 36 cockerels, 46 hens and 44 pullets, making a total of 158 birds in the single classes, and 85 in the pens; a grand total of 243 birds in the class that were exhibited by several of our best known breeders who own as follows: Mr. Frank McGrann, Lancaster, Pa., cocks, 3-6; cockerels, 2-5; hens, 1-4; pullets, 2-5; old pen, 3; young pen, 1st, with several cups and specials.

The Hilldorfer Black Minorca Farm, Saxonburg, Pa.: Cock, 1st and 2d; cockerel, 1st and 3d; hen, 3d; pullet, 1st, 3d and 8th; old pen, 4th; young pen, 7th; cup for best display and several specials.

Mr. A. Didriksen, Whitewater, Wis.: Cock, 8th; hen, 6-7; pullet, 4; old pen, 1st; young pen, 2d and 4th, and specials.

It was a royal class of quality, the largest at the show, and one of which the breeder can feel proud.—H. P. Schwab.

The Honest Queen Incubator.

In these days of cheap construction it is a gratifying experience to find an incubator built as honestly and substantially as the Queen Incubator is built. It is a regrettable fact that many incubators dry apart and fall to pieces after short periods of service. But this cannot be charged against the Queen Incubator. The materials used in the Queen are those best adapted to incubator use. The wood is thoroughly seasoned, the workmanship is of the best, the completed machine is honest. Proof of the substantial character of the Queen is seen in the fact that the manufacturer expects every Queen he turns out of his factory to last 25 years. It is well to look for lasting qualities when you buy an incubator. You hope to be in the poultry business not only for a year or two, but you want to succeed so well that you will follow it for many years, and you want your machine to last. In the Queen you get not only an honestly built, substantial incubator, but one that has the true hatching genius. The Queen's record is well known—honesty, big hatches, livable chicks, long life. Mr. P. M. Wickstrum, the manufacturer of the Queen, claims for it 28 points of excellence, and there is always a

BUFF ORPINGTON EGGS

AS GOOD AS MONEY CAN BUY

Don't fail to get our free mating list, in which you will find a complete description of our sixteen breeding pens—egg records—show record from 1910 to the present time, etc. Twenty-six of the winners at one of the recent National exhibitions were shown by our customers and all were hatched from our eggs. Our 1914 matings are going to produce the blue ribbon winners for many of America's best shows next season.

BRUCE & ABBOTT BOX 10 WHITELAND, INDIANA

Planet Jr.

No. 16 Planet Jr Single Wheel Hoe, Cultivator, Rake and Plow

The highest type of Single Wheel Hoe made. It is light, handy, and adapted to almost every garden use. Has leaf guard for close work, and a durable *steel* frame. Light enough for a woman to use.

The up-to-the-minute time and labor savers in field and garden. Planet Jr implements are the product of more than 40 years' experience of a practical farmer and manufacturer. Get them for scientific work and big results. $2 to $100.

FREE Our new 72-page illustrated catalogue contains valuable advice about tools for each kind of cultivation. Write postal today.

S L ALLEN & CO

Box 1107T Philadelphia

No. 11 Planet Jr Double Wheel Hoe, Cultivator, Plow and Rake

The greatest cultivating tool in the world for the grower of garden crops from drilled seeds. The plow opens furrows for manure, seed, etc., and can be reversed for covering. Crops can be worked both sides at once until 20 inches high. Steel frame. Just the tool for the onion-grower.

No. 25 Planet Jr Combined Hill and Drill Seeder, Double Wheel Hoe, Cultivator and Plow

A capital implement for large-scale gardening especially. It has automatic feed-stopper, seed index, and complete cultivating attachments. The hoes are of a special patented form which run close to row without danger to leaves or roots. Steel frame. Two acres a day can be easily worked with this tool.

No. 8 Planet Jr Horse Hoe and Cultivator

The best-known cultivating implement made. It is so strongly built that it withstands incredible strain, yet it is light and easy to handle. Has new steel wheel which prevents clogging with stones and other trash. Cultivates to any depth and adjusts to any width. Opens and closes furrow, and hoes right up to plants without danger of injuring them.

Fire-Fly Garden Plow

Especially useful to owners of small gardens, and to chicken-raisers for plowing up scratching yards. Its light weight makes it easy for women or children to use also. Enables the owner of a family garden to do all the work in spare minutes.

good substantial basis for any claim Mr. Wickstrum makes. Catalog and particulars can be had by writing the manufacturer at Box 4, Lincoln, Neb.

The Oakland Farms, Trenton Jct., N. J.

One of the largest, best and most practical poultry plants we know of and one of the oldest as well is the Oakland Farms at Trenton Jct., N. J., and but a short distance from Trenton, the State Capitol. Located on land sloping to the South are the several great long breeding houses, two large brooder houses and the incubator cellar, feed houses, etc., making a picture good to see and a lesson in fact of what the poultry industry is today.

Thousands of dollars are invested here and yearly there is an increase of buildings and business done with the reputation that Oakland quality has made its future secure. Here are two mammoth incubators of 20,400 egg capacity and brooder capacity to hover upwards of 15,000 chicks. The laying and breeding houses are built on same mammoth lines, three of them are 500 feet long and 20 feet wide and with almost innumerable colony houses, this plant is complete in every detail.

S. C. White Leghorns and S. C. Rhode Island Reds are bred here to a very high grade and to highest practical worth. Birds of their breeding have been prominent winners at our leading shows, including Allentown, Hagerstown, M. S. Garden, New York, Trenton, Philadelphia, New York Palace, etc. In their office is seen a great case full of silver cups and trophies won and which well attest the value of this line.

BABY CHICKS A SPECIALTY.

The specialty here are selected breeding stock, baby chicks and eggs for hatching by the setting, hundred or thousand. We have visited here before and told of this stock which when we consider the thousands of birds on the place, has been bred up to a very high grade of quality.

S. C. WHITE LEGHORNS.

We were pleased to note these matings this year. Mr. Roberts, the manager, has surely selected his breeders with skill, and pen after pen of these selected birds were seen to advantage. The males have good size and excellent carriage with long, well shaped back and full well carried tails. Real good heads and strong eyes a feature. The females are a choice lot in every way. No mistake has been made in their selection; they are strong birds, stand up clean and carry well; vigor is a feature of the entire flock. They are just the kind to bank on for healthy chicks and results.

S. C. RHODE ISLAND REDS.

In these they have one of the largest flocks we have seen. They are large robust birds of good quality and in the best possible condition. Males large strong fellows of sound color and good marking. Females long bodied, deep with good outline and fine heads; in color sound, not an extreme but a good rich red. A valuable lot for results.

Mr. G. C. Roberts, the manager, is just the kind of fancier we like to meet. His personal interest in his work and the success of the plant is his first consideration. His aim to give every customer full value and absolute satisfaction has brought results in success attained, and we are pleased to recommend both him and the Oakland goods to our friends and readers.—H. P. Schwab.

Cravenheim Poultry Farm, Bound Brook, N. J.

In and around Bound Brook, N. J., is one of this country's greatest poultry sections, and their Doctor Elias P. Hicks is building up his plant and business devoted to Anconas and Black Langshans on a farm of 50 acres.

The Doctor has been very successful this year at the shows, a record of which follows: At Paterson, N. J., State meeting of the Ancona Club he won: Cock, 1st; hen, 2d and 5th; cockerel, 4th; pullet, 2d; pens, 1st and 3d; State cup for best display.

At the Grand Central Palace, New York Show, the New York State meet.—Cock, 1st; hen, 2d; pen, 4th; special for best Ancona in the show.

At M. S. Garden, New York, cock, 3d; at Philadelphia, Pa., cock, 2d, and 35 firsts and seconds at eight other shows this season.

In Black Langshans he made practically a clean sweep, winning cups and many specials at following exhibits:

Augusta, Ga.; Paterson, N. J.; Asbury Park, N. J.; Palace, New York Show, and Philadelphia, Pa.

Many of these birds we have seen and handled and can attest their value. His winning Ancona cock at the Palace, New York, Show, was a beauty, with excellent type and finish and grand in color, nice head, etc.

We consider this a most reliable line of quality. Write for his mating list and particulars.—H. P. Schwab.

Producing "Soft Roasters" With Capons.

Plain poultry keeping affords one a living, but the big profits are secured by special work—the production of "by-products" we might call it. On the average poultry farm each year's output of cockerels is usually sold at a loss. This can be avoided if you will prepare your males to meet special market requirements. Producing soft roasters will make your cull cockerels more profitable than the females. Such roasters bring the highest prices when produced through caponizing. This operation yields the largest possible bird. The larger the bird the higher price paid per pound.

Having decided to raise soft roasters, select the best cockerels for the breeding pens. This can be done when they are three or four months old. Caponize all other cockerels and feed them two or three months longer. By this time they will weigh 8 pounds and be in prime market condition. Cracked corn, beef scraps and water should be kept constantly before them. Feed them some green food in the shape of cabbage, sprouted oats or green rye. Capons will reach the desired weight in a few weeks without other forcing than the above simple diet.

Soft roasters are in demand all the year round, but bring the best prices in the early summer. The new 20-pound limit for

Carver's Red Farms, Seville, O., devoted exclusively to Rhode Island Reds & Red Sussex. Eggs guaranteed

Write Your Name on a Post Card Today

For this Big 112-Page Prairie State Catalog FREE

No matter how many other catalogues you get don't fail to send for your copy of this big free book. You will find it different from any other incubator catalog ever published because it was written by one of the world's foremost experts on incubation and the rearing of chicks—a man who knows from actual experience how to succeed in the poultry business. He tells you how, by watching the hen that stole her nest, he hit upon the idea of the moistened Sand Tray—an exclusive patented feature of Prairie State Machines which insures hatching a larger number of strong, vigorous **chicks that live**—chicks that live and grow into profit

1914 Prairie State Incubators
Brooders, Hovers and Colony Houses

are fully described in this big, free book. They are used and endorsed by leading Agricultural Colleges and poultry experts the world over. For 30 years they have maintained the lead and with the new 1914 exclusive features they are simply incomparable. Those who must economize in the matter of price will be particularly interested in the Prairie State Keystone model which embodies all the new improvements with Prairie State quality and yet sells for only $9.00 and up.

Send for this FREE Book At Once

It contains also about 60 pages of valuable information on poultry raising. Tells **How to Feed, Rear and Breed for Best Results; How to Prevent and Cure Diseases; How to Grow Green Winter Feed; How to Build Poultry Houses; How to Preserve Eggs, etc., etc.** You will be surprised at the amount of valuable information this big 112 page book contains. A postal will bring you a copy by return mail—free and postpaid. Write (6)

Prairie State Keystone Machines with Sand Trays and all other improvements sold as low as..... **$9**

PRAIRIE STATE INCUBATOR CO.
201 Main Street HOMER CITY, PA.

parcels lately put in operation by the post-office department has greatly increased the opportunities for shipping capons and dressed poultry direct to the consumer at a small cost for transportation. Caponizing not only increases the size and weight of the male at killing time but the capon's flesh is more tender, juicy and finer flavored than the ordinary fowl. This is the reason caponized soft roasters bring more per pound.

The operation of caponizing is quite simple when you have a good set of modern instruments such as G. P. Pilling & Son Co., of Philadelphia, manufacture. This concern has a little booklet which describes the operation thoroughly. It also gives a lot of valuable information on the care and feeding of capons. They will be glad to send it free to any poultry raiser.

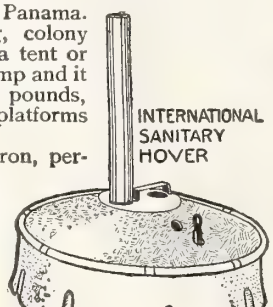
A Great Win.

Eugene C. Smith, of 317 Galena boulevard, Aurora, Ill., showed thirteen of his Single Comb White Leghorns at the January Chicago Show and nine of them were "in the ribbons." He won first pen; first pullet and first hen—three out of a possible five firsts—in addition to second and fifth cock. Mr. Smith is making a fine record with his Leghorns, and tells all about them in his 1914 catalog, which he has just issued. This catalog will be sent free to anyone interested upon request.

Belle City Hatching Book.

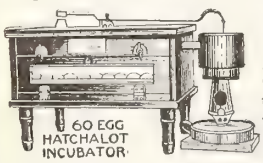
BY JIM ROHAN, PRESIDENT.

The book has just come from the printer, and already it has created a big sensation among poultry raisers. Men and women who have seen the first copies tell me it is the most remarkable thing ever gotten out on the poultry business. I can agree with them heart and soul, because the owners of my Eight Times World's Championship Belle City outfits did more to get up this book than I did. It is jam full of their stories of how the Belle City makes 90 to 100 per cent hatches. These accounts are given in their own words, not mine. All I have done is to put these stories into print in a great big portfolio with illustrations of my Eight Times World's Championship Incubator and my World Famous Brooder in exact colors. It took several printings to do that—but as it shows you just what the Eight Times World's Champion looks like it is well worth it. There is a great two-page "spread," showing the incubator and the brooder in natural colors—so lifelike that it is almost as good as setting the incubator and the brooder down before you. The outfit is also shown part by part with pictures and full description. My ten-year personal money back guarantee is printed, and my one-two-three months' home test plan is given in full.



I want you to know everything there is to know about my Eight Times World's Champion, because the more you know the more certain you will be that you get your money's worth when you join the Belle City army of successful poultry raisers. But the book has it all—and it does not cost you any more than a one-cent postal to get it. Whether you buy a World's Champion Belle City or not, you want to know what's going on among the winners. So write today. Address Belle City Incubator Co., Box 27, Racine, Wis.

The Open Door to Poultry Profits



The experience of years in developing the world's largest poultry farm has opened the door for *you* to greater poultry profits. Out of this experience has come the 60-Egg Hatchalot Incubator, the International Sanitary Hover, and the 6 in 1 Exerciser Feeder.

Raising Chicks Right

The International Sanitary Hover has stood the test of every climate from Quebec to Panama. You can use it in any building, colony house, laying house, or even a tent or drygoods box. Just light the lamp and it is ready for service. Weighs 30 pounds, easily moved—no holes to cut or platforms to build.

Made of heavy galvanized iron, perfectly insulated, fireproof and vermin-proof. Circular, with most warmth at the curtain, preventing crowding at center and smothering of chicks, and giving them pure air always. Heat radiates from *above*, preventing leg weakness. Used by largest poultry farms and State Experiment Stations. **Price $8.50.**

Hatching Chicks Right

The 60-Egg Hatchalot Incubator gives a mild heat over a wide area—not a dry heat distributed unevenly. It prevents the evaporation of moisture, which assures a healthy hatch from every fertile egg. Chicks are just as large as the shell will permit. Made of cypress, with dependable steel and zinc thermostat. It couldn't be made better at *any* price, but it is sold at $7.50.

Feeding Fowls Right

6 in 1 Exerciser Feeder keeps the poultry healthy and makes other feeding devices unnecessary. Large central hopper holds grain that the birds scatter in the litter, by working an agitator. Six other compartments hold dry mash, scrap, shell, etc. No food wasted. Makes feeding easy and economical. Price, 40-quart, $4.75; 20-quart, $3.75.

Third Prize Story in the Inter Ocean Contest at Chicago.

I had the pleasure of attending the "Poultry Show" at the Coliseum last evening, and as it was the first show of its kind that I had ever attended, naturally it impressed me very much and I learned from vision many things about poultry that I only knew from theory.

I am a back yard farmer on a city lot, located in the heart of the "Ghetto," and, as our back yard is only twenty-five feet square, I have not the space to keep the amount of poultry that I would like to.

I am employed during the day, and as I have only one arm (the left one), trying to keep a few chickens for utility purposes under conditions that are not exactly natural is a problem that an experienced poultryman would not undertake if he were obliged to go through the routine daily that circumstances compel me to go through.

The work is a pleasure for me, and it is simple and easy, chiefly because I use the mechanical devices exhibited by the Otis & Moe Company of Chicago, and as they are constructed on practical lines and do not get out of order even when dropped on the ground any one can have good results by using them and save time, money and labor.

Their "Sanitary Poultry Drinking Fountain" I think is the most valuable and practical device shown at the show, because it fills from the top; dead air space keeps the water cool in the summer and also prevents it from freezing in the cold weather. This device, by placing it in a partition, can be used for two pens; at the same time it prevents chickens from getting their wattles wet in cold weather, and it is constructed so that no water spills on the floor and ducks cannot slop while drinking from it.—W. W. Hartigan.

Amounts to a "Free Library" of Poultry Information.

We believe that practically every one of our readers will find it to his or her advantage to send to the Cyphers Incubator Company, Buffalo, N. Y., for a full set of the valuable free booklets and special 1914 circulars they are now mailing out, postage paid, to all who ask for them. These booklets and circulars include the following: Main catalogue, 1914 edition, entitled "Poultry Keeping in All Branches," containing 244 pages, 7¼x10 inches in size. "Selling Day-Old Chicks and Doing Custom Hatching," explaining both plans and giving examples of noteworthy successes, eight pages, 9x12 inches, illustrated. "Portable Hovers—When, Where and How to Use Them for Best Results," four pages, 11x18 inches, well illustrated. "Sectional Indoor Brooders—When, Where and How to Use to Best Advantage," same size as foregoing and well illustrated. "Successful Outdoor Brooding," telling "When, Where and How to Use Adaptable Brooding Hovers for Best Results," same size as foregoing. "Best Methods of Brooding," consisting of 52 pages, 7¼x10 inches in size, a daily guide for care of the chicks. "Poultry Foods and Feeding," also 52 pages, same size as above. Full instructions on how to raise broilers, fries, roasting chickens, capons, layers, breeders, etc. "Cyphers Poultry Farm 1914 Mating and Sales List," 20 pages, 7¼x10 inches, fully describing the basis on which the Cyphers Company's $80,000 all-purpose poultry plant is conducted, fully illustrated. To our subscribers all of the above mentioned booklets and circulars are entirely free, without any obligation on your part and so that you may "keep abreast of the times" on the latest poultry information we suggest that you write to the Cyphers Incubator Company, Dept. 30, Buffalo, N. Y., and ask for such of these pieces of printed matter as you would like to receive.

When you send in your request, please mention American Poultry Journal, thus doing us a valuable favor.

Mr. M. F. Delano's Great Record at Pittsburg, Pa., Jan., 1914.

Mr. M. F. Delano, Vineyard Haven, Mass., like his predecessor, Mr. Owen, has for years done big things at big places and at big times. Still we consider the record Mr. Delano has just made at the great Pittsburgh show in great classes of strong birds is just about the most beautiful record ever made by this or any line of birds. His winnings here are as follows:

S. C. White Orpingtons—In a class of 161 birds he won: Cock, 1st; cockerel, 1st; hen, 1st; pullet, 1st and 2d; pen, 1st; best collection with 6 entries.

S. C. Buff Orpingtons. The Club Show—In a class of 110 birds he won: Cock, 1st, 2d and 3d; cockerels, 1st, 2d and 3d; hens, 1st, 2d and 5th; pullets, 1st and 5th; old pen, 1st; young pen, 1st with 14 entries.

S. C. Reds.—In a class of 140 birds: Cock, 1st; cockerel, 6th; hen, 3d; pullet, 7th; cup for champion male and cup for best shaped male.

White Wyandottes. In a class of 155 birds he won: Cock, 1st and 4th; cockerel, 2d and 6th; hens, 1st and 7th; pullets, 3d and 4th; old pen, 1st; young pen, 1st; best collection; best collection any variety; champion male of the entire American class, and champion White Wyandotte male.

This record shows 16 of a possible 21 first prizes won apd 23 silver challenge cups, which include in Buff Orpingtons the President's cup for best collection of any variety in the show, cups for champion male and female and shape and color male and female, and about the same in the White Orpingtons.

His was a feature display and a record win made with most worthy birds of grandest quality, and for all it is only what we could expect from this line, knowing it as we do.—H. P. Schwab.

Mr. J. W. Andrews, Dighton, Mass.

The unusual is bound to happen and did happen at Boston this year, for this was the first in 16 years that Mr. J. W. Andrews did not exhibit his White Wyandottes at this beauty show.

During the years he has shown here Mr. Andrews has made a record of which he can well feel doubly proud and his only reason of not showing this year is that he sold his string to another to be shown here. A short review of Mr. Andrews' record and a special mention of some of his winning males will not be amiss here.

He has won first prize pen at Boston six times in seven years. First cockerel in 1910, 1911, 1912 and second cockerel in 1910, 1911, 1912 and 1913, or for three years he won both first and second cockerels. His catalogues show photos from life of his famous winners, including first cockerel in 1908 and special winner for best shape and color. First cock of 1911 and special winner for whitest male in show. First pen cockerel 1911. First cockerel 1911, winning in a class of 66 birds. First and second cockerels 1912, the first winning shape special, and other birds of note.

We have long considered Mr. Andrews as one of our best breeders and judges, he having served at M. S. Garden, New York, for some years. He knows what the Wyandotte should be and has succeeded in breeding a line of great worth.

This season he was called to judge the Wyandottes at Guelph, Ont., Canada's greatest show, and did splendid work.—H. P. Schwab.

United Breeders Inc., South Braintree, Mass.

The United Breeders, Inc., are the first co-operative organization of poultry fanciers and will specialize their strains of Harvard Reds in both rose and single combs. They have issued a booklet explaining their objects which is sent free for the asking. In this company are men who have made Rhode Island Red history, including Mr. Arthur W. Dilley, president, Mr. Frederick L. Haden, vice-president, and Mr. Irving W. Bean, treasurer.

Their line of Reds have been unusually successful this season, winning well at both M. S. Garden, New York, and Boston, with birds showing unmistakable strength and value in breeding quality. We have before commented upon their New York winnings and at Boston, in a class of 178 birds, they won cock 1st, hen 4th and pullet 4th. In Rose Combs, cock 2d and 5th, hens 2nd and 4th, cockerels 2nd, 4th and 5th, pullets 6th and young pen 1st.

Their second Rose Comb cock won the color special, a most worthy win, as he is to our notion the color of Mr. Bean's great cock Sensation, who for years was the ideal of all breeders.

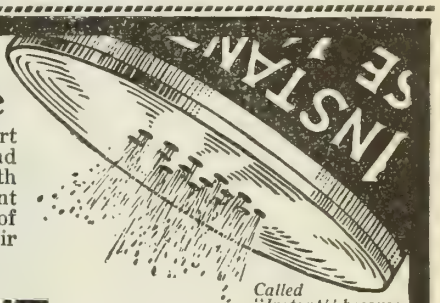
The combining of the several well known lines should make the Harvard Reds a winner. The organizers are all men of repute and most favorably known as breeders of worth.—H. P. Schwab.

Experience of An Amateur.

I look back with many a hearty laugh (although at the time I am a little afraid I swore a bit) at the time I tried to raise my first brood of chicks.

Between watching the mother hen to see that she didn't step on the little members of her flock and bringing the little fellows into the house to be put in a box back of the kitchen stove every time it rained (for shelter them she wouldn't) I was as busy as a wet hen.

How I put in that spring and how I raised a single one of that brood has, and always will be, a mystery to me, especially when I look upon the modern methods I uow use for raising them.



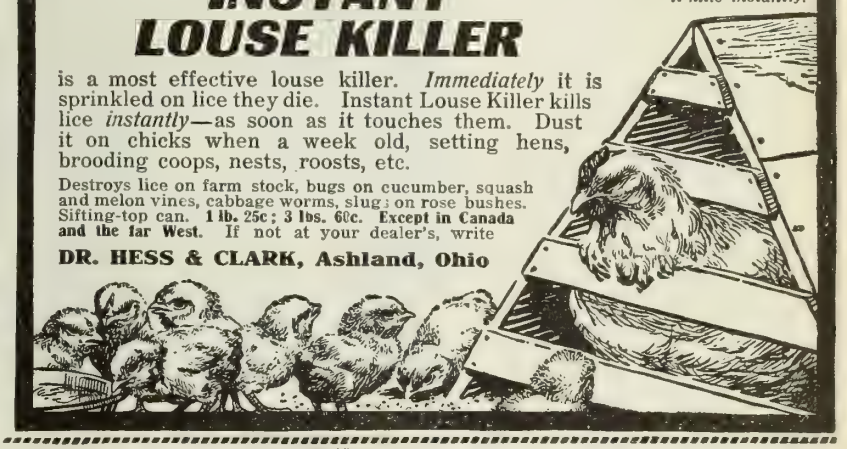
Two years ago I purchased a Perfection Feather Brooder, and as soon as the hen had hatched I took the chicks away from her and put them under this feather brooder, letting the hen go back to lay where she can make money for me.

With this feather brooder my troubles are over. There is no danger of the hen stepping on them, of being left out in the rain, no danger of fire, overheating, chilling, gas, crowding, smothering, leg weakness or bowel trouble. There is no fuel to buy or lamps to replace.

If you have been through the same experience that this man has been through, read the advertisement of this feather brooder, which appears in this issue, and then write the Simplex Supply House, Pontiax Bldg., Chicago, Ill., asking them for their catalog, which tells you all about this wonderful feather brooder.

Save Your Chicks From Lice

Your chicks can't get the right start in life—they can't grow husky and big-framed—if they are pestered with lice. These parasites inflict constant torment on chicks, robbing them of flesh and blood and keeping their vitality in a low state.



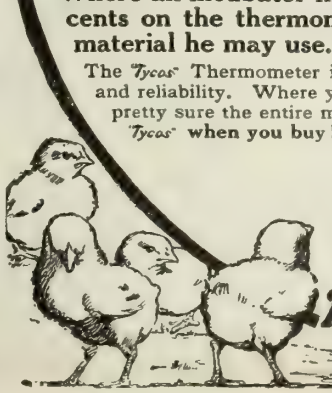
Called "Instant" because it kills instantly.

DR. HESS
INSTANT LOUSE KILLER

is a most effective louse killer. *Immediately* it is sprinkled on lice they die. Instant Louse Killer kills lice *instantly*—as soon as it touches them. Dust it on chicks when a week old, setting hens, brooding coops, nests, roosts, etc.

Destroys lice on farm stock, bugs on cucumber, squash and melon vines, cabbage worms, slugs on rose bushes. Sifting-top can. **1 lb. 25c; 3 lbs. 60c. Except in Canada and the far West.** If not at your dealer's, write

DR. HESS & CLARK, Ashland, Ohio



Be sure that the incubator *YOU* buy has a "Tycos" Incubator Thermometer

The Thermometer is the heart of the incubator. Maintaining exactly the correct temperature, is the chief factor in bringing out big hatches of healthy, sturdy chicks.

The best incubators always have "Tycos" Thermometers. **Where an incubator manufacturer tries to save a few cents on the thermometer, beware of other inferior material he may use.**

The "Tycos" Thermometer is the acknowledged standard for accuracy and reliability. Where you find a "Tycos" on an incubator, you may be pretty sure the entire machine is up to the standard. **Look for the "Tycos" when you buy!**

PRICES

"Tycos" Incubator Thermometer (Like Cut)	$ .75
"Tycos" Brooder Thermometer	.75
"Tycos" Incubator Hygrometer	1.50
"Tycos" Certified Incubator Thermometer	1.00
"Tycos" Electric Lighted Incubator Thermometer	2.50

Write for free booklet, "Thermometer Facts Worth Knowing."

Taylor Instrument Companies,
100 Ames Street
ROCHESTER, N.Y.

Mr. Maurice F. Delano, Poultryman

The Owner of the Famous Owen Farms, Vineyard Haven, Mass. The Man As We Know Him. The Great Island Poultry Farm Busier Than Ever. **By H. P. Schwab**

We left Mr. Delano at the Pittsburgh, Pa., show January 24th in a blaze of glory, and with the promise to visit him in the near future so that we could again see his great plant and whole line of stock which again was responsible for the brilliant record he made here at the Orpington Club meeting show, all considered he can well claim this to be the greatest ever made with these varieties.

It is a delight to visit shows and to view the beautiful specimens in wonderful condition, to see them as grown in their best quality, and then groomed and conditioned and exhibited by a master of Mr. Delano's calibre. East, West, North and South this line has been shown for years and has made new show history and records in every section. At New York, Chicago, Boston, Atlanta, Nashville, Augusta, St. Louis and other great shows almost without number they have made more and greater records than has any other line, that we know of.

These winning records are facts that demand special consideration where line quality and breeding value are considered, for upwards of ten years this line has been prominently before the public and has been improved year by year in quality, for annually it has made better and more records than before in their own hands and in the hands of their customers as well for their own winnings are but a very small share of the winnings this line has made for they are to be found at every show and in every section of the country. Every credit is due to the breeder who can consistently sell winners and whose supply of such quality seems to be unlimited, who at all times can furnish winners for any show and any company, but this is just what this man and farm have been doing for years, and the real secret is that back of it all is line value and breeding worth in his stock that must recommend it and make possible the quality and the reproducing quality here found.

Here at Pittsburgh in a show of 4,000 or more birds and in great classes of the popular varieties he breeds, Mr. Delano made what we consider is the most brilliant record of his career, a review of which follows:

In S. C. White Orpingtons 161 birds competing, he won cock 1st, hen 1st, cockerel 1st, pullets 1st and 2nd, pen 1st, silver cup for best collection, cup for each champion male and female and shape male. With but six entries in the five classes he won five first prizes and one second, the highest possible score that could be made.

In S. C. Buff Orpingtons, the Club show with 119 birds competing, he won cocks 1st, 2nd and 3rd, cockerels 1st, 2nd and 3rd, hens 1st, 2nd and 5th, pullets 1st and 5th, old pen 1st and young pen 1st. Here he won the President's Cup for best collection in the entire show, cups for champion male and female, cups for both shape and color on both male and female, etc., making a total of 11 cups on this one variety.

In White Wyandottes with 155 birds competing, he won cocks 1st and 4th, cockerels 2nd and 6th, hens 1st and 7th, pullets 3rd and 4th, old pen 1st, young pen 1st, with several cups and specials.

In S. C. Reds cock 1st, cockerel 6th, hen 3rd, pullet 7th. No pens shown. Cup for championship male and cup for best shaped male, etc., in a class of 140 birds competing.

To sum up Mr. Delano won a total of 16 of a possible 21 first prizes and a total of 23 silver cups including all championship cups.

It is particularly pleasing to us to write of Mr. Maurice F. Delano and his work, a personal friend of many years, one we have known almost a lifetime and under most every condition as a boy, as a man, as a breeder and as a judge, and always as a worthy and admired friend, he is today the same as the first day we knew him, his integrity beyond question, reliable and honest and always a thorough fancier and a master poultryman, he has every reason to derive much pleasure and satisfaction from his station and his work, and his friends particularly pride in his great success.

MAURICE F. DELANO

Proprietor of Owen Farms, Breeder of Buff and White Orpingtons, White Rocks, White Wyandottes and S. C. R. I. Reds

WHITE ORPINGTONS.

That the White Orpingtons are here to stay and are more popular than ever before is clearly evident to the observer of events. This season we have seen more and larger classes of them than ever before and we dare say that the general quality has improved a good 30 per cent over the past year, soundness in color is one of the greatly improved features for pure snow white birds are now seen in plenty, shape has also held pace and uniformity in type is seen to a very high degree, these with the improvements made during the past three years on combs, eyes and tails are most noticeable. The White Orpingtons as we have them today with their well known practical qualities make them one of our best and most desirable varieties.

The Owen line of White Orpingtons, or we may more properly call it the "Delano Line," for he is the man who has handled, mated and bred them all these years to their present state, was one of the first imported to this country, they have been under his eye and charge ever since, and to him a very great share of their progress is due. He has been their American champion from the first and his work has been consistent along with our breeders' demands.

At this time there are more and better White Orpingtons here on these farms then we have ever before seen in any flock, the birds are larger, evener and of more uniform quality than even we could have expected and it would puzzle anyone to find in this entire flock a paltry half dozen birds that would not add grace to any flock. We had reasons for surprise in the general shape and size and the evenness in quality and character. Here was seen almost without number cockerels, big husky fellows of beautiful form, heavy boned, full deep breasts, broad backs, fine tails and nice heads with extra good combs, and of that pearly white color so desirable. The same applies to the pullets, for they have the same character and quality in detail, for with legs well set they carry themselves gracefully and are sublime in their pure coat of absolute white. Beside their typical form and carriage and sound color the next feature here noted was the size and shape of combs and color of eyes. There can be no question but that Mr. Delano has greatly improved the White Orpingtons; we have visited these farms several times during the past few years and can well remember the stock and those birds in former years, then they were leaders and among the best in the country, and no mistake but that they are still leaders and high up among the best in the country today.

In cocks and hens Mr. Delano is well supplied, for he has a grand collection of these, and if there is any doubt in the breeder's mind of pure "Stay-White" White Orpingtons, then he should see these birds and all doubt will be expelled. Here are males and females from two to four years old as clean and sound as ever they can be, birds who years ago made their records and are just as fit today, but no doubt far more valuable in the breeding pens. His pens are all mated up according to his own fashion and they look very promising to us, for if like will produce like and quality produce quality, as we believe it will, then surely Mr. Delano has nothing to fear.

BUFF ORPINGTONS.

Buff color has always had a particular charm for Mr. Delano; we remember him many, many years ago breeding Buff Wyandottes and leading the world of breeders in buff color; he knows buff in all its stages and shades and in this we can find the secret of his wonderful success made with Buff Orpingtons. The buffs, like the whites, came to us in the rough; they had to be renovated according to American Standard ideas; they had to be toned and bred to the "Stay-Buff" strength and evenness throughout, sound in surface and under and from tip to tip. The progress Mr. Delano has made is seen here to advantage in his great flock of birds, for it is really a surprising collection.

The English breeders, if they can obtain shape, trouble themselves only in a secondary manner about general color, the size or shape of comb, color of eyes or lobes,

Fiske's Single Comb White Leghorns

The World's Best Breeder of Exhibition Pen Single Comb White Leghorns, winning at the Grand Central Palace, 1913, First and Fifth Pens, and at Madison Square Garden, 1913, Second and Fifth Pens. At Madison Square Garden, 1912-1913, I won First and FourthPens.

My winning at Buffalo, 1913, has never been equalled, for I won every prize in the Single Classes, First and Second Pens and all Specials.

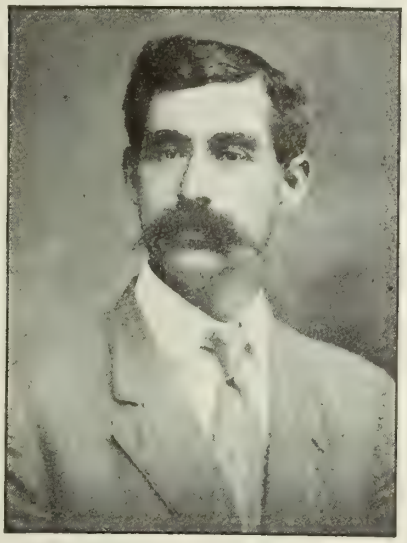
Some of my other winnings are as follows: Grand Central Palace, 1913, First Cock, Fourth and Fifth Cockerels, Special for Best Shaped Male; Madison Square Garden, 1913, Second Cockerel, Third and Fourth Cocks, Fourth Pullet, Special for Best Headed Male, Special for Best Headed Female; also winning at the same time, the $100 President's Cup for Display, same having been won three times, in 1910-1912-1913. **At Boston, 1914,** I won 1st and 2nd Pens on two entrys.

If you wish to breed and raise your own winners, you must have some of my great birds or some setting eggs to improve your stock. **Beautiful Breeding and Exhibition Cocks, Hens, Cockerels and Pullets** for sale at prices to fit the rich or poor. Besides being Show Birds, these birds are the Greatest Layers on Earth. **Eggs** from the finest of Exhibition Matings in the World, $1 apiece. **Eggs** from the Greatest Laying Females ever seen, $10 per hundred, $80 per thousand. **Baby chicks** by the hundred or thousand. Send for my catalogue at once. Single Comb White Leghorns and nothing but Single Comb White Leghorns.

Harlo J. Fiske **Box No. 4** **West Springfield, Mass.**

and even side-sprigs and stubs have no terror for them in a general way, but here we consider them as serious defects that must be eliminated or disqualification will follow. From this it can be seen that the American breeder labors under a great handicap, for a bird to pass muster here must be brought right in all sections or he won't get a pleasant look from the judge, and with this I feel free to say that the American breeders really have the task of making this breed over again according to our own ideas.

Mr. Delano had promised to show us a great deal in Buff Orpingtons on our visit to his yards, as it is one of his favorites, over which he is very enthusiastic, and let me say right here with cause for his great flock of this variety is of particular evenness and soundness throughout. It was really remarkable the number of clean buff tails seen here in both males and females, and so many more with just the faintest bit of color in tails or wing-bows, all in all they were a charming lot and filled several houses of choice and rare quality. In going from pen to pen and from house to house it was the same story of superior quality in cockerels and pullets and in cocks and hens.



Here Mr. Delano had finished all his matings for the season and among these we found particular interest in asking many questions, for we always like to go to headquarters to learn more and to find out if possible what the other fellow knows, as before stated we look upon Mr. Delano with reason as a master of buff, here in his mated pens we observed a great deal of value and found that all his work has reason with a purpose and object in view. Quality and line breeding are closely followed, and if those matings as made don't produce both form and color to the highest degree, then we don't understand how it ever can be had.

Mr. Delano does not believe in extremes, nor does he bank on superior merit and quality in any one bird to overcome defects in the others, for his matings are all made along lines of individual quality in every bird used with absolutely no dependence on chance, so that when he obtains the desired quality, he knows just how and why it was produced, and that it is dependable for re-production. This to our mind is his greatest asset and insures highest breeding quality, with highest standard worth. An individual chance bred bird may prove a great exhibition specimen, but such have particularly no value as reproducers or as line breeders. The road to success is only over the long straight road of line-breeding—value combined with individual qualities and this entire flock is a glowing example of this truth.

WHITE PLYMOUTH ROCKS.

Ever since we have known Mr. Delano he has been breeding White Plymouth Rocks and from the time he went to the Owen Farms years ago White Rock history has been made and enhanced. During these years (if we mistake not) this line has won at the M. S. Garden, New York, show alone nearly fifty first prizes as shown by them and by their customers. At Philadelphia, Chicago, Boston, Baltimore and other great shows similar records have been made by this line and to our notion they combine all that is excellent in White Rocks.

Mr. Frank H. Davey, superintendent of

FRANK H. DAVEY
Superintendent of Owen Farms

these farms and probably the best known White Rock Breeder in this country, came here some years ago with his own famous Graystone line of White Rocks, and since has had full charge of this department, and to him and his work much of their later day success with this variety is due. Both of these strains line back to the original Harr Graves strain at whose death in 1904 the Owen Farms purchased his entire line of stock.

Three years ago at a previous visit here we tried to describe for our readers the twenty mated pens of White Rocks seen here and fear we failed to do them full justice; now as then they are beautiful matings of quality and we would make no particular choice among them, they are so evenly and grandly made, full of highest quality that one like another promises most excellent results. The males have the desired long, deep bodies, low full carried tails, fine heads and are absolutely white, the females correspond with same character and quality. Here we noted several winners of the past, birds who have won the highest honors at New York and elsewhere who, like old friends, it was good to again meet.

Now as before we wish to particularly comment on the purity of their color, with flaming red eyes and pure yellow legs; here they are strong in these points of excellence so desirably combined, they stand well and strong and carry themselves very fine.

WHITE WYANDOTTES.

I believe that both Mr. Delano and Mr. Davey have particular reasons for feeling proud of their line of White Wyandottes, for we know of several records that birds they sold made this year, last year and other years, besides making several fine winnings for themselves yearly. Here at the farm this variety receives the special attention of both the owner and the superintendent, for both have a weakness for them and a just pride in their line which has been one of their best sellers and for which they have always had a great demand for exhibition specimens and choice breeding birds.

These, like their four other varieties, have their own buildings and department and are entirely isolated from one another. Once here in the Wyandotte department one is reluctant to leave, the matings are made beyond criticism. The same plan of individual quality is followed here as in the other matings and results can confidently be expected.

S. C. RHODE ISLAND REDS.

Rhode Island Reds have proven a staple variety and here we found a large flock of the Single Combs that, like their other varieties, have made many notable winnings the country over. Three years ago this line won three (3) first prizes at M. S. Garden, New York, making an electrifying record, which remains unequalled to this day.

The matings here are featured by extra good shape in the birds and a sound, even, rich color. Most of the males used are winners of note or bred from such and with their general evenness show character.

The very best recommend we can give this line is to here state that we know of a breeder who a year ago purchased from Mr. Delano a male and eight females for $50, and besides breeding a choice flock of

Mrs. Carver, Seville, Ohio, the big Golden Campine winner at Chicago Coliseum. Eggs from her exhibition matings. Hen-feathered males. Low down prices.

"Pittsburgh Perfect"

The Most Effective and Economical

Chicken Fence

Save money by putting up "PITTSBURGH PERFECT" Chicken and Rabbit Fence. Not a "netting," but a *fence* of finest mesh, strongest fabric, best looks, longest life. These features mean *fence-economy* and *satisfaction* in the biggest sense.

Don't lose any more money through birds lost, or stolen by prowling animals. Put up this fence *now* and give your flock *real protection.*

"PITTSBURGH PERFECT" Chicken Fences are easily erected. Stand trim and rigid for years. No top or bottom boards necessary.

SOLD BY DEALERS EVERYWHERE

The only *one-piece* fence made. Joints

Welded by Electricity

All styles of "PITTSBURGH PERFECT" Fences are made of the same high quality Open Hearth wire, thoroughly galvanized with pure zinc. Stay and line wires are inseparably joined at every contact point by Electric Welding, an exclusive method of manufacture which gives these fences their great strength.

New catalogue, sent free, shows all designs made for FIELD, FARM, RANCH, LAWN, POULTRY and GARDEN purposes.
Write for it to-day, together with circular describing the new "PITTSBURGH PERFECT" Fancy Top Lawn Fence.

PITTSBURGH PERFECT

THE WELD THAT HELD

PITTSBURGH STEEL CO., PITTSBURGH, PA.

birds, bred two cockerels that have been winners for him at two of our best and greatest shows. We had a buyer for either of these first prize winners, and offered in vain an unlimited price for either, which was refused. To produce such quality from birds costing but a mite over $5 each proves the claim I have made for the breeding quality of this line and shows it at its true worth.

Stock like this, that is produced with line breeding back of it, carries with it exceptional value and it is not always the individual that must solely be considered; look to line and breeding value and give them their due, for the greatest value in any animal is his breeding and reproducing quality. Price should be the last consideration for your time and your quality are worth far more than price in the end. Here also we are free to state that from what we know of their prices they are most liberal when we consider what they offer in the individual and the breeding back of them, it is full value to all.

This Great Island Poultry Farm, with its five varieties, has from first to last been the largest and most complete Standard-bred poultry plant we know of; here yearly thousands upon thousands of chickens have been grown that have been shipped to every nook and corner of the world with unusual credit to American production and American skill in breeding, they have well done their share to let the world know the value of our goods in money and in blood breeding lines and have placed our breeders in repute second to none on earth.

We visited these farms several years ago when first started and ever since at intervals of a year or two, but we have never seen there more or better stock than Mr. Delano has right now. With his matings made he has a surplus of several hundred in each of his varieties that are teeming with quality, and the kind that would help any breeder to better things in poultry.

Mr. Delano has with him besides Mr. Davey men well known as breeders in every department, each knows and understands his work and does it. We were pleased to here again meet Mr. Nickerson, whom we believe has been here always; he is the Orpington specialist, devoted to his work and with reason proud of his success; he has the confidence of Mr. Delano to an unusual extent.

Vineyard Haven is located on the Island of Martha's Vineyard and is about seven miles from the main land. Surrounded as it is by the great and restless Atlantic, its climate is tempered and the seasons are longer and of unusual evenness, insuring most favorable conditions for poultry culture.

Since last spring, when Mr. Delano assumed full ownership and control of this plant, he has met with pronounced success. He and his associates have the confidence of the public and are untiring in their efforts to complete the great task they have set for themselves, to breed more and better poultry and to lead the way to better things. Their personal pride will not let them waver for an instant, every man is on edge and this great plant surely has a very bright future which it so richly deserves.

Mr. Delano, we commend your work, it is of value to us all.

Looking Ahead.

Parcel post is here—it was bound to come, but we wonder how many men stopped to think of it ten years ago, and then took advantage of what it would bring.

There aren't very many—and when we hear of a case it is worthy of mention.

Down in Tennessee just outside of Chattanooga is one of the historical spots of the country—a place that will always be known the world over, it is the famous "Lookout Mountain."

Up on this historic mountain is the home of O. B. Andrews, originator and breeder of the famous efficiency 100% strain of Barred Plymouth Rocks and S. C. White Leghorns.

It was while raising these birds that Mr. Andrews could foresee the parcel post and the present demand for a good safe egg carrier, at a reasonable price.

So he started in to perfect a carrier—he didn't make one, but he made dozens of them—he tested them in every way and manner, he kept discarding the ones found lacking and improving on the ones that were good, until after a few years of experimenting he had perfected what is now known as "The Andrews Safety Egg Carrier."

It is a case that is perfect, yet made so

Gensemer's Campines Are Winners at the Great Coliseum Show, Chicago, 1913

We won on Goldens more prizes than all competitors combined.

Cockerels 1st and 3rd, Pullets 1st, 2nd and 4th, Hen 1st, Pens 2nd and 3rd.

Our 1st Cockerel and 1st Pullet were conceded by experts to be the best Goldens ever shown in America.

On Silvers at the same show we won 1st and 4th Cocks and 5th Cockerel.

At Cleveland Poultry Breeders' Show 1914, we won on Goldens, 1st Cockerel, 1st Hen, 1st and 3rd Pullets, 1st, 2nd and 3rd Pens, Silver Cup for Best Display.

Silvers, 1st Pullet, 1st and 3rd Pens, 2nd Cock, Silver Cup for Best Display.

that it is sold cheap enough to permit its use, not only by the fancier but also for commercial purposes.

The thousands of satisfied users are really the proof of their perfection and we feel perfectly safe in advising egg shippers to give the Andrews Paper Box Company a trial.

With each order of a dozen or more carriers they furnish the tape and shipping labels free.

If you will write them they will gladly mail you a catalog, which also gives complete description of their very unique safety chicken coop, baby chick carriers and portable wooden colony houses. Address Andrews Paper Box Company, Chattanooga, Tenn.

Carver's Red Farm.

Has a record of their customers winning prizes in twenty-five states last season, besides the winnings of Mr. Carver himself. At the big A. P. A. Ohio State Show Mr. Carver with S. C. Rhode Island Reds won 1st cock, 1st, 2d and 4th cockerel, 2d pen special for best male and special for 2d best male, and with his R. C. Reds 1st pen, 1st hen, 1st pullet, special for best female, special for 2d best female and special for pen.

While Mr. Carver was making this record one of his customers, a Mr. Lytle, won 24 prizes at the Dayton and Piqua, Ohio, shows, this list including all shape and color specials in his class. Mr. Lytle's winners are the result of two settings of eggs purchased from the Carver Farm last spring. Carver's Red Farms are as follows: No. 1 devoted exclusively to Rhode Island Reds; No. 2 exclusively to Red Sussex. Be sure to write for prices. Address Carver's Red Farms, Seville, Ohio.

The Home of Utility Show Birds.

At Trenton Junction, New Jersey, there is gathered together some of the world's finest fowls. Mr. Wm. D. Campbell, the superintendent of Wilburtha Poultry Farms, has produced some exceptional Columbian Wyandottes. He has several pens mated up with the prize winners of the 1913 Grand Central Palace and Madison Square Garden shows and other leading exhibitions.

Wilburtha Strain Columbian Wyandottes are noted for their wonderful egg producing ability and their unexcelled quality for broilers and roasters. In appearance they are about the most beautiful utility fowls one could raise. Their distinctive marking and feathering is most pleasing. The Columbian Wyandottes are not the only varieties raised so successfully at this farm. They have some choice Partridge Plymouth Rocks, Columbian Plymouth Rocks and a large flock of S. C. White and Buff Leghorns—the greatest layers of large white eggs in existence.

Wilburtha Poultry Farms are ideally located at Trenton Junction, New Jersey, to produce healthy fowls with vigorous constitutions. The young stock is reared right and kept free from taint of disease and vermin. They are line-bred from prolific laying stock that also have an envious record in the showroom. Mr. Campbell, the superintendent, says the demand for day-old chicks and eggs for hatching last season was so large that they have increased their facilities this year to enable them to fill all orders more promptly. We advise anyone interested in securing baby chicks, eggs for hatching or fine breeding stock to write to these folks for their free descriptive circular and prices before placing orders.

Shipping Eggs and Chicks.

The safe delivery direct to private customers by parcel post of strictly fresh table eggs and eggs for hatching and of day-old chicks by express is a problem every modern poultryman has to solve successfully before he can market these products to his best advantage.

You know yourself that no matter how high in quality a consignment of eggs or baby chicks may be, if they reach you in a battered, dirty or cheap package you instinctively feel that they are not up to your expectations. They do not satisfy—although the very same consignment in a clean, strong and up-to-date package would please you and make you feel that you had received your money's worth. Ship your eggs and chicks in the most attractive package you can secure, and other things being equal you will stand head and shoulders

Pape's Single Comb Black Minorcas

above your competitors. You will get more business and better business; your customers will come back with cash orders—not kicks and claims for damaged goods. The Wright Shipping Boxes for table eggs, hatching eggs and day-old chicks have been designed by a practical poultryman, one who has for years been shipping these products, and one who has given to the problem the experience and knowledge secured in this manner. Wright boxes are built on principles of strength, convenience and simplicity that make them very successful for their purpose. They combine a high quality of material with the last word in detailed perfection of construction.

The Tywacana Poultry Farms Co. manufacture these boxes and have a very interesting little booklet which they will mail free to any poultry raiser. The Wright boxes come "knocked down" flat, so occupy but very little space until ready to "set up," which is a simple and quick job, and pack for shipping to your customers. Write to them for prices. Address Tywacana Poultry Farms, Farmingdale, Long Island, N. Y.

Baby Chicks and Ducks.

The products of the "Niagara Farm," owned by W. R. Curtiss & Co., Ransomville, N. Y., have been so long and favorably known that we forget when they started. This was one of the early plants, and during the past few years has grown to immense size, and is today without exception the largest plant of its kind in this country, if not in the whole world.

Baby chicks, eggs for hatching and choice breeding birds in White Wyandottes, White Rocks, White Leghorns and Rhode Island Reds and Pekin and White Runner Ducks are their specialty. That they and their goods are reliable is attested by their great success and the many years they have been doing business.

We visited these farms lately and made mention of their plant and stock, and we are pleased to recommend it. The stock is of rare quality, strong and full of vigor, just the kind to assure results.

The poultry question has been a study here for years and the feeding in particular, as this is a most important item when upwards of 100,000 head of poultry and ducks are bred and grown each year. Their catalog gives feeding formulas that are of greatest value and the book is free to all asking for it.

Cut clover is also a specialty here. Their "Niagara Brand" was one of the first ever put up and offered for sale. I have used it for ten years and expect to for many more. Write them your wants and for catalog and always mention American Poultry Journal. —H. P. Schwab.

On the Job.

There is nothing like being on the job early, and to this fact our Canadian friend, J. S. Martin, can show several hundred baby chicks ready for the market. Mr. Martin started in early, hoping to hatch at least 2,000 chicks, and at the rate he is going he will have them by March 10th, which goes to prove that the early bird gets the worm.

Mr. Martin has just issued a beautiful catalog and mating list. It tells you all about his famous Royal White Wyandotte winners with snapshots of his breeding pens and plant.

If you write to him he will send you a copy and also quote you baby chick prices. Address John S. Martin, Box 51, Port Dover, Canada.

House of Quality.

That tells the story of a real modern up-to-the-minute poultry plant, which I had the pleasure of visiting the other day. It is the home of Standard White Wyandottes, bred and owned by F. E. Skinner at Sandwich, Illinois.

He has made quality his watchword and his hundreds of letters from satisfied customers bear out the statement that his is the "house of quality." Mr. Skinner's winnings included such shows as Indianapolis, St. Louis and Chicago. His mating list is just off the press and I take pleasure in recommending both him and his birds. Write today for his prices. Address F. E. Skinner, L. Box 806, Sandwich, Ill.—J. C. Johnston.

Wm. Cook & Sons, originators of all the Orpingtons, Scotch Plains, New Jersey, won with their Orpingtons during the season of 1913, 356 prizes, including 179 firsts and 105 seconds at the largest shows in America. At a large number of the shows they won the cup for the best bird in the show and several times cup for best pen in the show. Practically all these first prize winners are now mated up in their best egg

pens. Mr. P. A. Cook makes a practice of only showing a bird once and then mating it up; this insures fertile eggs. This firm has their mating list out, which can be had for the asking. They are also making a specialty of ornamental land and water fowl, having had attractive displays at the Cleveland and Pittsburgh poultry shows. Mr. Cook mentions the fact that the firm has now been in business forty-one years with an increasing business every year, which means forty-one years spent in giving satisfaction.

Our Old Friends.

Beyond a shadow of a doubt two of the world's greatest poultry breeders and exhibitors are our two old friends, W. R. Graves and his wife, Mrs. S. H. Graves.

These two poultry experts formerly lived at Southboro, Mass., but last fall moved to Janesville, Wis., where they combined their interests with W. H. Ashcraft. Mr. Ashcraft formerly had a good farm, but with the advent of Mr. Graves and his wonderful poultry knowledge, business increased with leaps and bounds; but right here we must not forget to mention Mrs. Graves, for you can travel the world over and nowhere will you find a greater bird conditioner than she is, and her handiwork has been seen in a great many of the blue ribbon winners of the country.

It is the "Graves" world renowned Blue Ribbon Strain White Rocks and White Wyandottes that are always such consistent winners at New York, Boston and Chicago, in fact, wherever shown they are among the winners, and at the annual show of the National White Wyandotte Club held in Cedar Rapids, Iowa, Jan. 12-17, along with 300 of the best birds ever shown, they won 1st, 4th, 5th and 6th cockerel, 3rd and 4th pen, 7th and 8th cock, 4th and 5th hen, 4th and 6th pullet, 2nd display cup four best cockerels, cup for best White Wyandotte in show, gold medal for best cockerel in show and medal for best cockerel in American classes. They also entered one pen of White Rocks and won the blue ribbon. Is it any wonder that we class Mr. and Mrs. Graves among the world's best breeders?

I am personally acquainted with Mr. and Mrs. Graves and can fully recommend them to our readers, assuring you that all orders placed with them will receive their careful and prompt attention. They have some mighty fine birds for sale and have just issued a handsome new mating list, so be sure to write them. Address Rockandotte Farm, Route 3, Janesville, Wis.

Brook Side Stock Farms.

Making nine entries with Golden and Silver Wyandottes at the late Columbus Show, Ira C. Keller of Prospect, Ohio, captured 1st cock, 1st hen, 1st cockerel, 1st pullet, 1st young breeding pen, also silver cup for best pen in American class. These were his Silver Wyandotte winnings. With Golden Wyandottes he won 1st cock, 1st hen, 1st cockerel, 1st pullet and the A. P. A. medal for best cockerel in entire show. He also won 9 shaped and color specials. A grand showing when you consider there were 1,200 entries in the show. This is the second time his Silvers have won the cup for best pen in American class at this show. Mr. Keller did not show any White Wyandottes this season. He has a few choice birds to spare and his big circular and mating list is free; write for it. Address Brook Side Stock Farms, Prospect, Ohio.

Secret of Vitality in Chicks.

It is not too early to begin thinking of the chick problem. To have a healthy chick one must begin not with the incubation but with the parent stock.

Perhaps the most thorough going tests ever applied to the big problem of producing healthy chicks have just been concluded and it has been shown that absolutely healthy breeding stock almost always produces healthy chicks. White diarrhoea should be prevented rather than cured.

Poultry fanciers and even directors of state experiment stations have been resting under the delusion for example that the hen gets her lime for her egg shells out of oyster shell or raw lime. The fact is that it has never been proven that any fowl can assimilate any mineral matter that has not first been digested by vegetable life.

The Nabob Remedy Co., Box A, Gambier, Ohio, therefore has perfected a formula that gives the hen predigested lime, equivalent to the available lime contents of a ton of oyster shell, in a five pound package. This is a wonderful formula and we suggest that you write them for folder which tells the complete story.

A Guaranteed Trap-Nest

Never fails to work. It is simply constructed and cannot get out of order. No mechanical parts. Can be set in one second. No springs. A child can put it together. Single nest one foot long. Price each 75 cents. Money refunded if not satisfactory. Write for catalogue.

TWENTIETH CENTURY HATCHERY DEPT. B CHATFIELD, OHIO

Wisconsin Wins In Big Hatching Contests Every Year

Winner 1910-1911-1912-1913

Mrs. J. McMahon, Veedersburg, Ind., won in Missouri Valley Farmer Hatching Contest, hatching 125 chicks from 126 eggs.

Mr. C. B. Armitage, Atwater, Ohio, won in Successful Farming Contest, hatching 181 chicks from 181 eggs in two hatches.

Mrs. J. W. Mize, Vaughn's Mills, Ky., won in Successful Farming Contest, hatching 208 chicks from 209 eggs in two settings.

Mrs. F. H. Lewis, Montrose, Pa., in 1913 won in Successful Farming Contest, getting 96 chicks from 96 eggs in one setting.

These contests were open to all makes regardless of price and prove beyond question that the famous Wisconsin machines are the **best for the money in the world.**

I stand ready to prove to you that Wisconsin Incubators are the best built and best equipped machines in the world for the money. You can't get bigger or better hatchings even if you pay twice the price. I build the outer walls of my incubators of Genuine California Redwood —costing 4 times as much as materials some manufacturers use. If you will write for my catalog, I will gladly mail you a sample of the lumber so you can see the quality and compare it with others. If you do this I know you will order a Wisconsin. One hatch will pay for your machines and more. If you are not perfectly satisfied, simply write me—send the goods back and I'll not only return your money, but pay the freight charges and charge you nothing.

ORDER DIRECT FROM THIS AD

130 Egg Incubator Chick Brooder

Both Machines For Only $10

Freight Paid East of Rockies

You can send in your order direct if you wish and save time. Money back if you are not pleased. I have been advertising in this paper for years. The publishers know me and know that I do just as I agree. I am undoubtedly making the (6) readers of this paper the most remarkable offer on high grade incubators and brooders that has ever appeared in the paper. You take no risk. I give

30 Days Trial and 10-Yr. Guarantee

Why Take Chances

Get This Free Book

Find out what an Incubator is made of before you buy.

Write for Free Catalog and we will send you a sample of the Redwood our Incubators are made of.

Wisconsins are bigger, better, more value than ever —no increase in price. Incubators have hot water heat, double walls, dead air space between, double glass doors, copper tanks and boilers, self-regulating. Nursery under egg tray. Incubator and Brooder shipped complete with thermometers, lamps, egg-testers, all set up, ready to use when you get them. Incubators finished in natural colors showing high grade California Redwood lumber used—not painted to cover inferior material. If you will compare our machines with others we will feel sure of your order. Don't buy until you do this—you'll save money—it pays to investigate before you buy. Money back if you are not satisfied.

WISCONSIN INCUBATOR CO., Box 76 , RACINE, WIS.

The Washington, D. C., Show, December 23-27, 1913.

The Greater Washington Poultry and Pigeon Club held their annual exhibit in a hall entirely too small and where it was next to impossible to draw the people. Also there are two associations there with room for but one, both have loyal members and loyal breeders and we hope for the sake of the fancy and all concerned they will get together and hold one "Great National Exhibit." They can do this if they but try.

There were several nice classes of birds here. Black Langshans fit to win in any show, exhibited by Mr. Porter Elosser, Cumberland, Md., who won about all awards.

Barred Rocks, a very nice class with first cockerel the gem of the lot, beautiful in barring and color.

White Rocks, a beauty class with birds in best possible condition, Mr. C. F. Webster, Girard, Pa., winning all first and second prizes.

Buff Rocks very good; many strong specimens.

Partridge Rocks good in number and quality. First cock and cockerel grand.

White Wyandottes one of the best and largest classes here, fine quality in every coop and winners of exceptional quality, first cockerel winning best bird in show.

Partridge Wyandottes as good as we expect to find them at any show, Mr. H. J. Hunt 3d a strong winner and Mr. S. E. Ferrar close up in all classes.

Reds in both combs well shown. Shape a feature and excellent color. The cockerels in Single Combs a hot lot.

Orpingtons in Buff, Black and White shown in good numbers and of grand quality. In the Buffs the Old Forge Poultry Farm, Spring Grove, Pa., won first hen on a charmer, also cockerel and third pullet. Mr. Walter Johnson, the famous baseball player, was exhibiting his White Orpingtons here and won 2d hen, 2d cockerel, 2d pullet. As a player he usually wins first prize.

S. C. White Leghorns, a large class with many fine birds, condition very good.

S. C. Buff Leghorns, a grand lot and many of them color averaged fine, shape and size extra.

White Cornish, a large class and with many very fine specimens.

Andalusians good.

Campines a surprising small class.

Most all varieties were shown and the show was complete in classes of water fowls, bantams, pigeons, etc.

Now, boys, once again get together and give the fancy what it deserves—a great show at the nation's capital.—H. P. Schwab.

Streator (Illinois) Association.

Twenty-five real progressive poultry men of Streator, Ill., recently met and formed an association with a view of improving local conditions. It will be known as the Streator Poultry Association and will be affiliated with the A. P. A. The following officers were elected: W. B. Meils, president; Richard Marshall, vice president; Chester Jack, second vice president; W. H. McCormick, secretary and treasurer; Fred Schroeder, supt.; Elmer French, asst. supt., and W. S. Eisenhart, Lawrence Weitlespach, Finn Schroeder, W. C. Jones and George Westwood, as directors. The best wishes of the A. P. J. go with you, gentlemen. May you have unbounded success.

Quality Tells.

One of the best shows in the country and one where competition is always strong, is the Indianapolis National Fanciers' Show. Therefore when a breeder is fortunate enough to capture one of their blue ribbons, he can justly be proud.

H. N. Hanchett, of Jackson, Mich., is one of those few who is holding his head high, for his Blue Orpington cockerel carried away the blue ribbon. He also won 4th cockerel and 5th pullet. At the Detroit state show he won 1st and 2nd cockerel and 1st pullet, at Jackson, Mich., he won 1st, 2nd and 3rd cockerel and 1st, 2nd and 3rd pullet. At Chicago Coliseum he won 2nd and 5th cockerel and 4th and 5th pullet.

At the Jackson, Mich., show in one of the strongest classes ever shown Mr. Hanchett entered two White Wyandottes (the first entries of Wyandottes he has made since the Garden show of two years ago), and he won 1st pullet and 1st pen.

All of these winners are found in the mating pens of Mr. Hanchett, and without doubt should produce some of the best Blues in the country this year. Before placing your order, write for his list and prices. Address H. N. Hanchett, Jackson, Mich.

J. S. & C. A. Barton.

In South Bend, Indiana, is located one of the real modern up-to-date poultry plants of the Middle West, and along with the plant the "Buff Orpingtons" bred there are strictly up to the minute—birds that have won the "lion's share" of the awards at many of the leading shows.

At the recent South Bend show it was the writer's pleasure to handle some of their entries, all of which showed fine quality, the 1st cockerel being a grand bird in type and color—a shade of golden buff throughout. If you are looking for Buff Orpingtons that are sure winners, write the Sunrise Poultry Yards, South Bend, Ind.—J. C. Johnston.

THIS IS THE ALUMINUM "CONVENIENT" LEG BAND
Note the strong, secure fastener, so simple and complete—the number is not stamped in, but raised OUT—plain, readable—can't get full of dirt. Reaches you already bent in shape ready to put on—12 bands 20c; 30 for 45c; 60 for 75c; 100 for $1.00. Sample Free—

Chicken Chowder makes Chesty Chix.

It makes them grow twice as fast. This means large profits, heavy egg production and vigorous chicks that withstand disease. You can't afford to be without this *growing feed* now, any more than you could afford to be without it last winter when you proved that "if Chicken Chowder won't make your hens lay they must be roosters." Feed Chicken Chowder in addition to Purina Chick Feed and double your profits. For sale by leading dealers. Order from your dealer today.

Checkerboard Poultry Book FREE!

For your dealer's name we will send you this 48-page Poultry Book, containing plans of houses, breeding and feeding charts, space for daily egg records, cures of diseases, care of baby chicks, etc. It also contains information about Col. Purina's half price galvanized iron Chick Drinking Fountain (2 for 25c) and more details about his Automatic Chicken Chowder Feeder (50c). Write today.

Col. Purina, Purina Mills, 801 Gratiot Street, St. Louis, Mo

Illinois State Poultry Show.

(Continued from last month.)

well spread tail; good legs and feet; white in undercolor of neck. Third, fourth and fifth were in their right places.

Hens.—First, good Rock body and back; well spread tail; comb bad; well laced in all sections, losing somewhat in color of hackle. Second, good type; well finished; bad comb and head; nice broad back and well spread tail, losing in color in all sections to first. Third, good Rock type; fine back and body; slightly pinched in tail; coarse in comb; even in color in all sections; well penciled, but two or three shades too light in ground color. Fourth and fifth both good hens properly placed.

Pullets.—First, well balanced on good firm legs; good head and eye; slight cushion in back; ground color good, showing splendid lacing; hackle color good. Second, a close running mate for first; grand head and comb; strong color in hackle; good penciling all through. Third, good back, body and breast; pinched in tail; well penciled; ground color a shade light. Fourth, too strong in color, showing metallic sheen in ground color. Fifth well placed.

Single Comb Rhode Island Reds.

Cocks.—First, good, well balanced type; good back and tail; a shade light in surface color, strong under, with fairly good wing; shape special. Second, long back and body, good breast and tail, fiery red eye, good wing and undercolor; surface two shades light. Third, short in back and body; good tail, coarse comb; strong even surface color, good undercolor and wing; losing on shape. Fourth, unfinished in back and tail; good comb and eye, losing in surface and undercolor. Fifth, good back and body, long keel; off in tail shape; comb bad; lost in color, both top and under.

Cockerels.—First, well balanced; a trifle short in back and body; good tail and breast; one shade of color from head to tail, which if a shade richer would have been perfect; strong in wing and undercolor of hackle; color champion male. Second, good back and body shape; tail too long; good color, top and under; good comb and eye; losing in color of wing. Third, short in back and body; bad comb; splendid color in back, breast and body, breaking in hackle and losing in color of wings. Fourth and fifth well placed.

Hens.—First, grand head, great length of back and body; long, straight keel; brilliant red color, with strong undercolor in all directions; won with ease. Second, good large type; fine back and tail; neat head and comb; too loosely feathered; good color all through. Third, fourth and fifth in proper order, losing in type and color to first and second.

Pullets.—First, well balanced in all sections; neat head and comb, with good eye; strong in color both top and under; won shape, color and champion female. Second, equal to first in type, with strong wing, losing in surface color. Third, grand back and body; little short in shanks; good comb and head; strong in wing; color losing in surface. Fourth and fifth good strong contenders for honors.

Rose Comb Rhode Island Reds.

Cocks.—First, splendid type; great length of back and body, with good, well carried tail; clean, even color all through. Second, short in back and body; bad comb; light surface color and losing in wings. Third, coarse in head; good back and body; pinched in tail; good surface and undercolor; losing on condition. Fourth, bad head and eye, losing in type and color. Fifth, belonged at the foot of the class.

Cockerels.—First, well finished; short in back and body; good breast and legs; brilliant color top and under; strong wing; color special and champion male. Second, a good, unfinished specimen; good surface and under color, losing in wing and hackle. Third, good long type; good back and body shape; well finished; losing in top and undercolor. Fourth and fifth well placed.

Hens.—A good class well placed, first hen winning shape special and champion female.

Pullets.—First, type and finish good; grand head and comb; red eye; strong in color both top and under; won color special. Second, nice carriage; good head and comb; strong in surface color; losing in undercolor to first. Third, fourth and fifth all classy pullets showing lots of quality.

Light Brahmas.

Cocks.—First, a grand, large, vigorous bird, strong in color all through, showing splendid Brahma type. Second, beautiful in color, but losing in type.

Cockerels.—First, a good representative of their grand old breed; won shape, color and champion male. Second, long in back, losing in shape and color. Others well placed.

Hens.—First, cushioned in back; excellent lacing in hackle and tail; good in wing. Second, good type and finish, losing in color to first.

Pullets.—First, a beauty in type and finish; clean color all through; well balanced on good legs. Other pullets good and well placed.

Black Langshans.

Cocks.—First, a large, vigorous bird, flat in back and off in tail; good head and feet. Second, good back; low in tail carriage; good head points; losing in color to first.

Cockerels—First, well finished; well balanced; good back, tail and body; firm legs and feet; good comb and head; showing some bronze in back and tail; shape, color and champion male. Second, third, fourth and fifth well placed.

Hens.—First and second, good birds. Others in proper place.

Pullets.—First, good head, back and body; good legs and feet; unfinished in tail; clean color; won shape, color and champion female. Second, good in tail shape; long back; bad comb; good legs and feet.

Single Comb Brown Leghorns.—Exhibition cocks.—First, good breast and body; well carried tail; bad comb; slightly breaking in back in front of tail; hackle and saddle striping perfect; wing color extra good; under color good. Second, nice carriage, well finished, losing in color to first.

Cockerels.—First, well finished; good tail; breaking in back in front of tail; coarse in comb; good lobes; strong in striping in hackle and saddle, with good undercolor and wing. Second, well finished; better head; good carriage; losing in color of ear lobes. Others well placed. Fourth won shape special.

Hens.—First, good head and graceful in every line of her body; good tail well carried; excellent striping in all sections. Second, losing in all sections to first.

Pullets.—First, neat head; good racy type; good, well spread tail; well striped all through. Other pullets good quality all through and close contenders for all places.

Single Comb White Leghorns.

Cocks.—First, neat, well balanced; good tail well carried; a trifle short in back; good breast and body; white in face; shown in fine condition. Second, good comb, head and eye; short in back; breaking in front of tail; tail carried too high. Third, grand type; comb in bad condition; gracefully curved lines to body, with grand back; tail

See 'em go for it!

There's nothing like H-O Steam-Cooked Chick Feed to whet the appetite of your little chicks.

The scientific blend of health-giving grains is pleasant to their crops, and the steam-cooking makes this chick feed unusually easy to digest. It's not wise to feed raw grain.

H-O Steam-Cooked Chick Feed

is a scientific mixture of Corn, Cut-Oatmeal, Cracked Wheat, Kaffir Corn, Peas and Millet — *steam-cooked* by a special process in our mill.

Sold only in 10-lb., 25-lb., 50-lb. and 100-lb. bags, with tag showing guaranteed analysis. If you cannot get H-O Steam-Cooked Chick Feed, Intermediate Scratch, Scratch Feed, Poultry Feed, Dry Poultry Mash or Chick Feed, from your dealer, write for samples and prices.

The H-O Company Mills: **BUFFALO, N. Y.** | **John J. Campbell** General Sales Agent **HARTFORD, CONN.**

Save Fowls from Roup

For sneezing, coughing or moping fowls put in the drinking water

Conkey's Roup Remedy

A Preventive and Remedy. Fowls take their own medicine. Keep on hand and save your flock. 25 cents, 50 cents and $1.60

The G. E. Conkey Co. Cleveland, O.

WHY FEED CRYS-CO GRIT? 10 REASONS

1. BECAUSE it increases the egg yield considerably, therefore **Your Profits.**

2. BECAUSE it contains **99% Pure Carbonate of Lime** which makes the shells—hard shells which means less loss in shipping.

3. BECAUSE it contains pure silicate grit, giving the hen finer plumage and being cubical in form a perfect grinder, thereby insuring digestion of the food.

4. BECAUSE in **Crys-co** you have a perfect shell producer and grit combined, far superior to oyster shells and ordinary grit.

5. BECAUSE it means economy, as **Crys-co** goes half as far again as shells, as there is no waste, and you need no additional grit.

6. BECAUSE it promotes digestion, keeping the hens healthy, and in a great measure prevents egg eating.

7. BECAUSE it costs no more than ordinary shell or grit.

8. BECAUSE it has the hearty endorsement of many of the most prominent fanciers and poultry raisers in the U. S. Men who know (Original letters on file.)

9. BECAUSE you are raising chickens for the results and not for the pleasure only of seeing them around or the work there is in it.

10. BECAUSE as a wide-awake poultry raiser you want better results and in **Crys-co** you will find them. Let us prove it to you.

Therefore buy a sack from your dealer to-day, but look for the trade-mark on a white sack, or write us.

Valuable booklet free.

DEPT. D 3845 Connecticut Street.

ST. LOUIS, MO.

well carried; sickles a trifle long. Fourth and fifth were well placed.

Cockerels.—First, grand type; beautiful lines in back, body and tail; tail well spread and carried low; bad comb; nice head and lobes; snow white; shown in good condition; won shape, color and champion male. Second, unfinished; short in back; good comb and head; tail well spread but lacking in sickles and coverts.

Hens.—First, neat head and comb; good eye; grand back and tail; breast and body lines near perfection; plumage snowy white. Second, strong in head points; narrow in back; good legs and feet; shown in fine condition.

Pullets.—First, racy in type; graceful curves in all sections; neat head and comb; well spread tail; won shape, color and champion female. Second, close to first, losing in comb and shape of tail, and not shown in as good condition. Third, fourth and fifth good quality, well placed.

Rose Comb White Leghorns.

Cockerels.—First, neat, well finish; bad in comb; color good; won color special and champion male. Second, close to first. Others well placed. Fourth winning shape special.

Hens.—First and second both good; little choice between them; first winning color special and champion female.

Pullets.—First and second real classy; first winning shape special.

Single Comb Black Minorcas.

Cocks.—First, good type; well up on good legs; good body, back and tail; nice lobes; coarse in comb; color good all through. Second, good back and body shape; high in tail; good head and clean color. Others well placed.

Cockerels.—First, short in back and body; fine head and lobe; a trifle short in shanks; good color all through. Second, well up on legs; good back, body and head; unfinished in tail; carriage good. Third, fourth and fifth were in their proper places.

Hens.—First, grand body; good legs and feet; great length of back; low, well spread tail; nice comb and head a wonder in Minorca type and color; shape and color champion. Second, coarse in comb, losing in type and color to first.

Pullets.—First, nice head and comb; good length of back and body; little high in tail; clean color in all sections. Second, well up on legs; good comb and head; narrow in back; tail well carried.

Rose Comb Black Minorcas.

Cocks.—First, grand specimen; perfect back and tail; great length of body; up on good legs and feet; good comb, head and lobes, with beautiful color in all sections. Second, good body and back; tail well carried; trifle short in legs; bad comb; clean color in plumage but losing in eye-color. Third, well up on legs; good length of back and body; unfinished. Fourth and fifth, good birds well placed.

Cockerels.—First, grand type and carriage; well spread low tail; color and shape champion male. Second, smaller in size; excellent type; good head and comb; perfect lobe; great in body and tail; shape; color clean. Third, a good, unfinished bird; up on nice legs with good body and back shape. Fourth, great carriage; unfinished; a real comer. Fifth, young, undeveloped; good lobes; bad comb; clean color.

Pullets.—First, excellent type and carriage; good body, back and tail; beautiful in color. Second, good in head points; nice back and body, losing in finish to first.

Hens.—First, grand type; nice legs and feet; fine head and comb; won shape, color and champion female. Second, coarse in head and comb, losing in type and color to first. Others good, classy hens well placed.

Mottled Anconas.

A small class with plenty of quality. First pullet a beauty. First hen good in type and evenness of color.

Silver Campines.

A small class with no exceptional quality excepting first hen and first pullet, the latter showing good type with clean-cut, snappy color.

Buff Orpingtons.

Cocks.—First, large, vigorous bird; good head and comb; great length and depth of body; well balanced on good strong legs; slightly pinched in tail and a little high in breast; even shade of golden buff color in all sections, with strong undercolor throughout; color special, champion male. Second, good back and body; short, strong shanks; bad comb; unfinished in tail; a shade too strong in surface color in all sections; under color good; a grand good bird when finished. Third, great length and depth of body, good comb and head points; short, strong shanks; breast carried too high; clean buff color in all sections with strong undercolor. Fourth, grand type; great body and legs; good head and comb; color about two shades darker than standard, running dark on wing bows and in tail; lost on color. Fifth, good back and body; short, strong shanks, bad head and tail; good shade of color, but uneven on surface; strong underneath.

Cockerels.—First, great in length and depth of body; fine, broad back and tail; slightly up in breast; bad comb; strong eye; one shade of golden buff color all through, with strong undercolor. Second, grand type; broad back and saddle; broad, well rounded breast; short shanks and great depth of body; comb and head good; color about two shades stronger than standard, even all through; undercolor good; shape special. Third, good type; a trifle up on legs; good back, tail and body; bad comb; shade strong in color; losing in color of hackle and tail. Fourth, good length and depth of body; nice back; short shanks; bad comb; losing in color of wings. Fifth, good head; back and body even buff color; strong underneath; losing in finish.

Hens.—First, very large; good type; short shanks; great length and depth; well spread tail; nice head and comb; shade strong in surface; undercolor good. Second, good head, back and body; fine length and depth; short, strong shanks; even golden buff surface color; strong under, losing in color of wings and tail. Third, coarse in comb; great in breast shape; deep in body; very short on shanks; uneven in surface, good in under color. Fourth, good, even buff color, losing in type and finish. Fifth, good length; broad and deep; good breast; slight cushion on back and losing in shape of tail.

Pullets.—First, grand in length and depth of body; perfect back and broad, well rounded breast; tail well spread and well carried; color a shade stronger than standard, but even in all sections, with

Double Your Egg Yield!

Mr. Poultryman: You want more eggs from your hens. We want to help you. That's the reason we are publishing *"The Golden Egg"*—*to help you.*

This Book Free to You

This book is brimful of information of vital importance to poultrymen.

Feed your hens right—you'll average *200 eggs a year.* *"The Golden Egg"* tells exactly what and how to feed them. Fresh cut bone, prepared in a Humphrey Bone Cutter, makes bone, muscle, feathers and *eggs.* Feed your hens *The Humphrey Way.* Thousands of farmers have tried it out. They've found it means big profits for them.

Just put your name on a post card and request us to send *"The Golden Egg."* Then you've taken the first step on the road to doubling your egg profits. Write *to-day.*

THE HUMPHREY GREEN BONE and VEGETABLE CUTTER

will save half your feed bills and double egg yield. Guaranteed to cut more bone, in less time, with less labor, than any other. Send for Special Trial Offer and handsome catalogue.

HUMPHREY, White St. Factory, Joliet, Ills.

good undercolor; shape and champion female. Second, good length; broad, deep body; golden buff color throughout, with fine under; wing and tail good; color special. Third, fine head, breast and body; pinched in tail, losing in surface color, but good underneath. Fourth, large, deep, massive; strong undercolor, losing on surface color and tail. Fifth, good length and depth; head and comb good; color too strong, losing in shape and color of tail.

Black Orpingtons.

Cocks—First, broad and deep in body; massive; good breast and shanks; comb slightly frosted; good clean color; shape; and champion male; second, similar in type to first, but smaller; good comb and head, losing in size and tail shape; third and fourth well placed.

Cockerels—First, second and third close together, good class, well placed.

Hens—First, large, massive type, short shanks, good color; second and third were close contenders.

Pullets—First, great length and depth, good legs and feet, clean color, nice head and comb; second and third losing on type and finish.

White Orpingtons.

Cocks—First, vigorous, massive bird, short in body and keel, bad comb, good back and easy winner; second, good back and body, short in tail and bad comb; third, losing in type and color to first and second.

Cockerels—First, large, broad, deep, good back and body, short, strong shanks, coarse comb, shown in poor condition; second, good length of back and body, deficient in breast shape, good head and comb, losing in type and finish; third and fourth well placed.

Hens—First, good Orpington type, body broad and deep, short shanks, good comb and head, strong in eye, won shape and color champion female; second, good head and comb, snow white in plumage, losing in type to first.

Pullets—First, great in type and finish, evenly balanced on good strong shanks, grand back and tail, good head, comb and eye, fine color; second, losing somewhat in type in all sections to first; third and fourth good pullets but outclassed.

The Bantam exhibit, although small, was chock full of quality, Klingbeil Bros., Petersburg, Ill.; Mrs. A. T. Franz, Jacksonville; Chas. A. Kuhl, Astoria, and Geo. H. Johns, of Ogelsby, being the principal winners.

The Turkey and water fowl classes were very good and strong, rare quality showing all down the line. Bronze Turkeys were a splendid class, Jas. S. Miller & Sons winning most of the awards. The Pigeon exhibit was one of the attractions of the show, as was the exhibit of dressed poultry and eggs.

Canton, Illinois, Show Ranks With Best in the State.

The poultry exhibit which closed at Canton, Ill., January 3 was one of the most modern shows it has been our pleasure to visit. About six hundred land and water fowls were on exhibition and represented good quality all through. Classes were provided for old and young pens in Barred Rocks and Buff varieties, and competition was strong in these classes. Buff Orpingtons were the leading class, with competition keen enough to make it interesting to all exhibitors. White Wyandottes were exceptionally strong; many of the entries in this class could have given a good account of themselves in a much larger show. White and Black Orpingtons were both good and brim full of quality. White Rocks, although a small class, had quality to win any place. Barred Rocks were strong in both the cockerel and pullet bred classes, many of them showing the quality produced only by careful mating and breeding. The Rhode Island Red classes showed plenty of quality, and as competition is always lively in the Red alley there was no lack of interest there. White Leghorns were a good class, and the Bantam and pigeon exhibits were greatly admired. The exhibits were cooped in Kiepper collapsible coops and made a very neat and attractive appearance.—J. C. Johnston.

Sussex Club Formed.

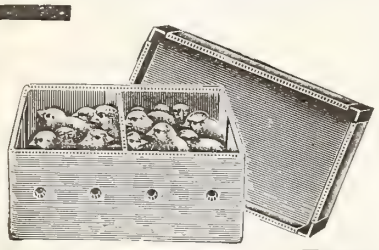
At the recent Buffalo Show, held during Thanksgiving week, a specialty poultry club was formed to promote the Sussex fowl. Dr. E. K. Conrad of Hackensack, N. J., was elected president and A. A. Carver of Seville, Ohio, secretary. For further information address Secretary, Sussex Club of America, Seville, Ohio. Annual dues are $1.00.

The fifteenth annual exhibit of the Elgin Poultry Association, which closed January 11, 1914, was the most successful exhibit, both in number and quality, ever held in the history of the association. Seventeen hundred head of land and water fowls were on exhibition. The hall was elaborately decorated with flags, bunting and evergreens. The cooping was very neat and attractively arranged. In the center of the hall were cooped in a large wire enclosure a number of different varieties of turkeys, ducks, geese, poultry, pheasants, pigeons, etc., including some rare specimens. Barred and Columbian Rocks, White and Buff Wyandottes, Rose and Single Comb Reds, Single Comb Brown and Single Comb White Leghorns, Black, Buff and White Orpingtons and Mottled Anconas, were the leading classes and some splendid quality was exhibited in all of them, the Single Comb White Leghorn class being exceptionally strong. The show was loyally supported by the press and public of Elgin, and the receipts more than satisfied the highest ambitions of the association. Plans are already under development for the sixteenth annual exhibit, to be held at Elgin, January 2-8, 1915, and the management promises to make it even more successful than the one just closed. A winning at Elgin in the quality displayed there is worth going after. It behooves you to keep Elgin in mind when making up your list of shows for next season.—J. C. Johnston.

You Can Make
Big Money

from chickens and eggs in the San Joaquin Valley, in California. Favorable climate, easily grown food and high prices for your product is the profit-making combination that works to your benefit.

The opportunity is so good, and the need for eggs and chickens so great, that we have prepared this special book for free distribution.



This book tells of the profits that others have made and how they did it. It describes the country and tells what you can do.

Published by the Colonization Dept Atchison Topeka & Santa Fe Railway System

After you have read it, I will be glad to have you write me and I'll give you such additional information as you desire.

We have another book about "Dairying," and I'll send that free, too, if you wish.

A Winning Poultry Combination.

In the short space of nine years, F. A. Tecktonius, the Buff Leghorn breeding expert of Racine, Wis., has developed a strain of Single and Rose Comb Buff Leghorns that are the wonder and admiration of the entire poultry world. With practically no previous experience in poultry breeding, Mr. Tecktonius has, in this comparatively brief time, put himself in the very front rank as a poultry man. This remarkable feat has been accomplished through scientific breeding methods, together with application of the same business skill and ability as displayed in the building up of his extensive manufacturing interests, otherwise.

Mr. Tecktonius has achieved the unique distinction of producing, along strictly scientific, legitimate breeding lines, a most remarkable combination fowl. One that, on the one hand, has demonstrated itself a consistent and persistent winner of honors in the big exhibitions throughout the country—where "recognition" means breeding reputation and success; on the other hand, proving itself, just as consistently and persistently, an "egg machine" of wonderful capacity. That his accomplishments have not been merely a "flash in the pan" is conclusively proven by his long and unbroken record of winnings, in the great exhibition arenas, as well as in National laying contests, where his success has been as marked and gratifying as in the showroom.

The "Tecktonius Strain" of Buff Leghorns is to be found in every nook and corner of the U. S. and Canada; extending, as well, into remote parts of foreign countries, even as far as New Zealand.

By reason of the detailed management of his extensive and growing manufacturing and poultry interests proving a heavy tax upon his time and energy, Mr. Tecktonius a few months ago secured the co-operation (upon a partnership basis) in his poultry business, of Mr. B. C. Reed. Mr. Reed is known, far and wide, as a S. C. Rhode Island Red breeding genius, as well as one of the country's most scientific and successful poultry experts. Therefore, in placing the breeding management of the "Tecktonius Strain" of Buff Leghorns in such expert and able hands, means a "ten strike" in poultrydom, and assures even greater success in the future than in the past.

With the complete consolidation of the poultry interests of these two past-masters in scientific poultry culture, from now on their skill and energy will be directed toward showing the poultry industry that the Tecktonius-Reed Strains of Buffs and Reds are the greatest winners for poultrymen the poultry world has ever seen. Mr. Tecktonius has the reputation of backing up every claim made for his wonderful strain of Buffs, and this reputation will be strictly maintained in relation to the Reed Strain of Reds.

In order, therefore, to prove that their claims of the outcome of seven years scientific breeding of this strain of one of America's most popular birds are entirely justified, they have mated six pens of the "Reed Strain" S. C. Rhode Island Reds, these having been selected from the cream of 565 birds. These pens comprise two cocks, four cockerels, 20 hens and 40 pullets. Each one is a marvel of breeding—each one marked with exquisite, rich, even, red color, and each one absolutely without contrast between hackle, back and sickle feathers. The tail and wing-markings of this stock are as near perfection as breeding skill can make them. The types, in males and females, in these six pen matings, are in keeping with the highest standard requirements, and are, also, well over standard breeding weight.

We bespeak for this team of able, ambitious, poultry experts, success in the future even more pronounced than achieved, individually, in the past. Write them for prices. Address Tecktonius-Reed Farm, Route 7, Racine, Wis.

J. A. Barnes.

It gives me pleasure to call your attention to the advertisement of J. A. Barnes and his Silver Wyandottes and White Plymouth Rocks, which appears in this issue. He has been specializing in Silver Wyandottes for a number of years and in that time has bred and exhibited some very high class specimens, his cock bird, Silver King, I consider one of the best I have ever handled.

Some of Mr. Barnes' winnings for this year were first cock, first and second hen, first pen and first and second pullet at Lincoln, Ill.; at Champaign, Ill., first cock, first hen, first pullet, first pen, cup for best pen Silver Wyandottes, champion male and champion female; at Decatur, Ill., first and second cock, first and fourth hen, first and third cockerel, first, second and third pullet, first pen, cup for best pen Silver Wyandottes and cup for best display in American class. Read his ad and then write for his price list. Address J. A. Barnes, R. F. D. 7, Decatur, Ill.—J. C. Johnston.

What's the Real Temperature?

When you take the downy chicks from the incubator you perhaps begin to count on the fine flock of mature fowls you'll have next fall. But hatching the chicks is really the easiest part. Raising the youngsters by artificial heat in brooders has often proved a rather hard problem because the heaters sometimes furnished too much or too little heat for the chicks.

If it's too hot in the brooder, your chicks suffer, smother and become weakened—if too cool they become chilled and crowd together in a heap, trampling and suffocating many. The survivors will be sure to contract colds and be subject to bowel trouble. However, if the temperature in the brooder is kept just right at all times, your chicks will be happy and healthy and grow to maturity in the pink of condition. But, if the brooder thermometer is inaccurate, how can you regulate the heat correctly? An accurate thermometer, then, is a very important factor in the successful rearing of chicks.

"Tycos" Thermometers are absolutely

accurate and dependable and have proved their worth during years of careful testing by the best incubator and brooder manufacturers as well as experienced poultrymen everywhere. They have saved the life of many chicks by giving an immediate warning of the slightest changes in temperature. "Tycos" Brooder Thermometers are made with great care. After filling, each one is "aged" and then "pointed" to ascertain its absolutely correct individual scale. A "Tycos" Thermometer does not leave the factory of the Taylor Instrument Companies, at Rochester, N. Y., unless it passes a final test of 100 per cent accuracy. All this care in manufacturing costs time and money, but it is absolutely essential to make a high grade thermometer.

When buying a brooder or incubator, insist on "Tycos" Thermometers and you will eliminate most of the causes of failure in hatching and rearing sturdy chicks. The Taylor Instrument Companies, Rochester, N. Y., have an instructive little booklet, "Thermometer Facts Worth Knowing," which will be mailed free to readers of this publication. We suggest that you write today for a copy of this booklet.

Brown's Fence Bargain Book FREE

The Brown Fence & Wire Co. Dept. 3 Cleveland, Ohio

A Complete Poultry Plant for $25.

The "High Cost of Living," so much talked of these days, has a steady opponent in "Bob" Essex, judging by the low-cost offers he is making to poultry keepers in his new 1914 catalogue. Prices of material may go up, and they do, but that has not prevented him from keeping his selling prices down. A glance at his new catalogue makes one feel anxious to buy.

He has a splendid little new style colony house at $8.50. It's like giving it away. It seems to meet every requirement from a hen house complete with roosts to a brooder for newly hatched chicks. It is designed so that it can also be used for two separated pens for a couple of males for fitting them for show; or for two pairs, or two trios for special mating purposes. The front being equipped with both glass and cotton removable frames, backed with wire, makes it suitable for all weathers, winter or summer. It is hard to beat it for raising chicks with the aid of the Essex-Model

Improved 1914 Hover, and when its wire run is attached it is really a wonder of an all-round coop. There is a new $25 combination offered this year that is an extraordinary outfit. Many an incubator alone costs more than that, but here you get an Incubator, a Hover, a Colony House, with removable cotton and glass frames, a wire run with a wooden also a wire roof, and four removable cotton frames, a Food Hopper and Drink Fount, forming a complete poultry plant that gives anybody a good chance to start in the poultry business right at so little expense as to appear nearly impossible. How it is done we cannot say. The catalogue tells.

The "Baby" Mammoth 800 Egg Incubator has come to stay; and Bob is the man to introduce it. Many a poultry-keeper has wanted a Mammoth coal-heated Incubator, but—not too big—not too high-priced; and here it is for the first time. Eight pages of the catalogue are devoted to its illustrations and description. Three pages of Portable Poultry Houses give an idea of how good a house can be obtained for very little money. Some of these houses are "Sectional." That is, they can be added to any time by buying an additional section—starting off with one. The pictures show at a glance whether or not they suit your needs.

Following up this theory of giving advice he has put into his catalogue seven chapters: "A Beginning in Poultry Keeping," "How to Hatch and Raise Better Chicks," "How to Breed a Strain of Better Layers," "Health and Disease in Poultry," "The Year's Poultry Work—Month by Month," "America's Biggest Poultry Farm," and "The Truth About Poultry Keeping."

It would be a mistake to forget to mention the cover of Bob's New Book. It's a peach! Something new in poultry illustrations that will please the ladies who keep Poultry, and those who don't—not forgetting the man who has an eye for the female figure. Better write for it today. It doesn't cost you a cent even for postage. Tell Mr. Essex that you saw this in American Poultry Journal, and he'll send you one quick. By the way, the cover is in colors, and we want to say that the one color cut shown on this page does not do it justice. Address Robert Essex Incubator Company, Buffalo, N. Y., and mention American Poultry Journal.

"Chickens Will Come Home to Roost."

No more conspicuous illustration of the truth of this old saying has ever been noted than in the case of the first prize Single Comb Rhode Island Red cockerel at the last Madison Square Garden Show.

This wonderful bird is a pure Crowther "aristocrat." He was raised in Connecticut, first shown at the Rhode Island Red Club of America's National Meet at New Haven, winning first prize and many specials. He was sold at this show and was then entered at the "Garden," where he again proved to be in a class by himself, winning first prize, color special, and special for the best Rhode Island Red hatched in 1913. The owner offered the bird for sale. Several prominent breeders became interested, but Ira M. Crowther, Willoughby, Ohio, the originator of the famous "aristocrat" strain of Single Comb Rhode Island Reds purchased him, bringing him home to roost by the side of many of his relatives, cousins, aunts, uncles, grand-parents, great and great-great-grand-parents.

This cockerel is one of the grandest specimens of the strain that has ever been produced, and together with the grand first prize pen, shown by Mr. Crowther, making six "aristocrats" entered, every one participating in first prize honors at Madison Square Garden, where the greatest of the great specimens of all poultry are shown, proves beyond all question that there are no better Reds on earth than his "aristocrats."

We Expect It.

Why is it that a man can get you into the habit of looking forward to whatever he does, being done just right and yet a little different from anyone else? Well, that is the way our friend, E. B. Thompson, has us. He always

The General says:-

Eggs *are* eggs—when your hens don't lay. A warm chicken house encourages the hens.

Make the roof—and sides too—of

Certain-teed

ROOFING

—The label guarantees it for 15 years—the three biggest mills in the roofing industry are behind that label.

seemed to go a step farther, and that is just what he has done with his 1914 Egg Booklet. We knew he was publishing one, but when it arrived it was so neat and attractive and so different from anything ever published that right away before we looked at the inside, we knew it was from the Imperial Ringlet Farm.

This booklet tells the story of Thompson's Barred Plymouth Rocks; it tells you about his wonderful winnings (in short form), to give them all would take a large book. He tells you just why the "Imperial Ringlet Eggs" are the ones to buy and his argument is good. He tells you of the wonderful success his customers have had with eggs purchased of him, for the past thirty-four years.

It is a book that every Barred Rock breeder should have. Just drop a postal and you will receive a copy free. Address E. B. Thompson, Lock Box 510, Amenia, N. Y.

Keep Them Clean.

You may have blooded fowls or they may be of mixed breeds. But vermin show no preference. The mites, which are red when full of blood, harbor on the perches and in the filth during the day, but when the fowls go on the perch and the chicks to the brood coops at night, then the mites swarm out of their hiding places and each one fills itself with blood.

From this annoyance and weakness on account of the loss of blood, the fowls fail to fill the egg basket; their combs turn pale and dysentery takes place. Thousands of fowls are lost annually from this cause alone. But a good preventive is put up in the form of Dirk's Red Mite Killer. It keeps your fowls free from lice, good for scaly leg and if used 30 days before hatching season the chicks will be free from the dreaded head lice.

Satisfied users everywhere testify to its effective and lasting qualities. Write for prices; it is sold under a guarantee. Address M. E. Dirk, Dirk Block, North Baltimore, Ohio.

Mr. Rolla C. Lawry.

Mr. Lawry, the new second vice-president of the National Single Comb White Leghorn Club, well deserves the honor conferred upon him. No other man has done more to establish a reputation and market demand for the Single Comb White Leghorn.

Mr. Lawry was formerly instructor in

Poultry Husbandry at Cornell University; and for the last five years has been manager of the Yesterlaid Egg Farms at Pacific, Mo., where range raised Single Comb White Leghorns are produced by the thousands.

They Do Come Back.

It is with a great amount of pleasure that we call your attention in this issue to one of our old advertisers, a gentleman who left the chicken industry just ten years ago, after several years of successful breeding.

Somehow or other he couldn't stand it any longer and he has at last answered the "call of the fowl" and reappears, using the columns of the American Poultry Journal the same as he did ten years ago. The gentleman whom we refer to is C. S. Wetmore, of Lackawanna, N. Y.

With his White Wyandottes at the 1914 Buffalo show he won fourth and fifth pullet and second cockerel. We feel safe in saying that Mr. Wetmore will be heard from in the coming show season, for he has some very fine birds. He has a number of choice cockerels and pullets and will be pleased to quote you prices. Address C. S. Wetmore, Abbott Road, Lackawanna, N. Y.

A Nice Record.

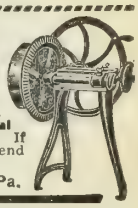
You have to give it to the F. L. Poultry Farm for being in the "regular winner" class. They have had a mighty fine record for the season and carried away a number of ribbons.

Mr. Ober, the owner, makes a specialty of Rhode Island Reds (both combs), and his recent winnings are as follows: Greater Pittsburgh show with Single Comb, 1st hen, 1st pullet and shape and color special; at Grand Palace show, New York, with Rose Comb, 5th pullet; at Madison Square Garden show, New York, with S. C., 1st hen; at the McKeesport, Pa., show, with R. C., 1st and 2nd cock, 1st and 2d hen, 1st pullet, 1st and 3rd cockerel, 1st pen, best display, also shape and color specials; at Pittsburgh Exposition with S. C., 3rd cock, 1st and 8th hen, 8th pullet, 3rd old pen, and champion hen, and at the same show with R. C. birds he won 4th, 5th and 6th cock, 4th hen, 4th and 5th cockerel and 1st pen.

His mating pens include these various winners, so be sure to write him for list and prices. Address F. L. Ober, R. F. D. 1, Verona, Pa.

Feeding Poultry Mustard.

We are asked almost daily—Why feed mustard to hens? And our usual reply is that we believe that poultry mustard helps egg production, aids fertility and is of general benefit to the fowls.



The problem is and has been to secure eggs and plenty of them and particularly from September to April, when prices are high and when eggs are wanted for hatching. Our own experience is that mustard stimulates the fowls and insures the best possible production of eggs and without leaving any after effects. Hens, after going through the moult, which is a severe strain, when toning is helpful and assures results.

In England the breeders have for many years been feeding mustard and we believe this is the secret of their success, for they

THE KIND YOU WANT
Birds that are bred right, that look right, that are right.
Wetmore's White Wyandottes
were ribbon winners at 1913 *Buffalo Show* winning 1st and 3rd Pullet, 2nd Pen and 5th Cockerel in strong competition. White Wyandottes are superior table fowl and wonderful layers. If you want choice birds to improve your strain or foundation stock, I can supply you.
C. S. WETMORE
ABBOTT ROAD LACKAWANNA, N.Y.

do grow quality there with size and quick maturing birds, all of which is of utmost importance from the viewpoint of the fancier or the practical breeder.

Mustard should be fed in the mash either wet or dry and regularly for best results. In England, when actual tests were made, birds of the same variety fed with mustard greatly outlaid all others and the great egg farms of this country are now liberal users of it. Personally I can recommend it and do and with it French's Poultry Mustard, which is the "original" poultry mustard and if the breeder will insist upon this brand results highly satisfactory will follow. Write the R. T. French Co., Rochester, N. Y., for their booklet and particulars.—H. P. Schwab.

The Guide to Success.

Many readers of the A. P. J. will be glad to learn that the 1914 Complete Catalogue and Poultryman's Guide, published annually by Cyphers Incubator Company, Buffalo, N. Y., is now being mailed; also that the first edition copy will be mailed free by the Cyphers people, postpaid, to any of our readers who will write for it and mention the A. P. J.

The Cyphers Company's 1914 book contains 244 pages, 7¼ by 9¾ inches in size, and each copy weighs nearly one pound. It is splendidly illustrated from cover to cover, including hundreds of pictures of fowls, down-to-date poultry plant views and recent portraits of foremost American and Canadian poultry breeders.

The title of the 1914 Cyphers Company book is "Poultry Keeping In All Branches," and there are eight unusually valuable chapters which fully justify this name. They are as follows: Best Methods of Back-Yard Poultry Keeping. Small Poultry Plants and How To Manage. Profitable Poultry Keeping on Farms. Poultry Keeping as a Regular Business. Advantages of Standard Poultry Breeding. Production of Eggs and Poultry For Market. Methods of Marketing to Secure Top Prices. Special Branches of The Poultry Industry.

These eight chapters consist of reliable information and practical suggestions on the most popular and profitable methods of poultry and egg production, either on a small or large scale. The intention has been to cover all legitimate branches of the poultry business and to give helpful data and reliable advice relating thereto. These chapters are such as you would find in any first-class poultry book and not only give the reader a correct idea of what can be done in these different branches of the poultry business, but they also contain many suggestions that will be found of practical value in your daily operations.

As heretofore, this 1914 Annual Poultryman's Guide presents an "Open Letter," by Grant M. Curtis, President of Cyphers Incubator Company, wherein he tells about the company's big fire that occurred August 16th, 1912, and explains how this critical situation was overcome, the result being that the Cyphers Company is now in a new business "home" that is the largest institution of the kind in the world. Numerous pictures are shown of the new plant in full operation. Mr. Curtis in his 1914 Open

Letter also points out the great benefit that the United States Parcel Post is proving to be to all poultry and egg producers who have taken advantage of it. To obtain a free copy write to Cyphers Incubator Company, Buffalo, N. Y., or address nearest branch store, as follows, being sure to mention the A. P. J.: 12-14 Canal Street, Boston, Mass.; 41 Barclay Street, New York, N. Y.; 329-331 Plymouth Court, Chicago, Ill.; 317-319 Southwest Boulevard, Kansas City, Mo.; 2127 Broadway, Oakland, Cal.; 121 Finsbury Pavement, London, England.

One of the Regulars.

When it comes to winning blue ribbons regular, you have to take your hat off to H. A. Keister and his Rose Comb Black Minorcas. He has been a regular Chicago winner ever since 1908 and this year was no exception. He is also a regular winner at Boston and also Springfield, Ill., besides several smaller shows. In fact, whenever ribbons are given out look close and you will find that the "Keister Strain" always come in for a good share of them.

If our memory serves us correct Mr. Keister has taken first cockerel at a number of the Chicago Coliseum shows and the late one was no exception; he also won first pullet, second hen and fifth cock, a fine record—four prizes and only five entries. Mr. Keister has a very fine farm of birds and if you want Black Minorcas it will be to your interest to write him for prices. Address H. A. Keister, Bangor, Mich.

A Square Deal.

Treat others as you would have them treat you, that is the motto and the rule under which J. Quincy Dawson conducts his famous poultry farm. For 23 years he has been in the poultry industry and he surely must live up to his motto or he would not have been in the business so long. Mr. Dawson is a consistent winner at all the leading shows and fairs. He breeds Single Comb Buff Leghorns and Columbian Plymouth Rocks. It will pay you to write and get his price list. Address J. Quincy Dawson, Dept. 4., Coshocton, Ohio.

PALACE NEW YORK SHOW WINNING
Barred Plymouth Rocks

In this great class of 213 quality birds I win First Prize Cockerel and Color Male Special. First Prize Pullet and Color Female Special, and Second Prize Exhibition Pen on four entries made. For color and clean cut barring these birds were the class of the exhibit.

Twentieth Century Hatchery
BOX 73, CHATFIELD, OHIO

Ohio Chicks in Montana.

The above picture is from a photograph submitted by Herbert H. Knapp, Secretary and General Manager of the Co-Operative Breeding and Hatching Co., Tiro, Ohio. The chicks are owned by Mrs. Anna Jackson, Sumatra, Mont. Mrs. Jackson received a shipment of sixty-day-old S. C. White Leghorn chicks from the Company in June. The photograph was taken in September and shows fifty nearly matured chicks.

This is certainly positive proof that this Company is producing and shipping "BET'TER HATCHED" CHICKS. Mr. Knapp states that their success lies in their better built equipment, a thorough knowledge of the business and the fact that every chick is hatched in pure air, otherwise they could not travel 2,000 miles and show the wonderful results in the above photograph.

While this Company is hatching and shipping day-old chicks from ten of the leading varieties, they are making a specialty of S. C. White Leghorns in five hundred and one hundred lots, to be reared with coal and oil brooder stoves. For a free catalog address The Co-Operative Breeding and Hatching Co., Box A, Tiro, Ohio.

For Thirty Years.

F. M. Clemens, of Mechanicsburg, Ohio, has been a breeder of pure bred fowls for the last thirty years. At show time you always find him and his Columbian Plymouth Rocks carrying away a number of blue ribbons. This year on account of illness Mr. Clemens was unable to make but one show, the Ohio State at Columbus. Entering one bird in each class he made the following wonderful record: 1st cock, 1st hen, 1st cockerel, 1st pullet, 1st old pen and 1st young pen. A good man with good birds. We take pleasure in calling your attention to his advertisement in this issue, read the ad and write for his prices. Address F. M. Clemens, Mechanicsburg, Ohio.

A Heavy Winner.

Down in Staunton, Ill., is the home of Chas. C. F. Fritz, a breeder of a strain of Barred Plymouth Rocks, the quality of which is fully attested by their winnings the past season. Entered in the keenest of competition he has never failed to come out a victor, his list of winnings include Quincy, Ill.; Alton, Ill.; Indianapolis and Illinois State Show. At the latter he made a grand winning and this is the strongest class of Barred Rocks ever seen at the state show. He has several head of extra quality stock for sale, besides eggs from special mated pens. Write to him for prices. Address C. F. Fritz, Staunton, Ill.—J. C. Johnston.

Nineteen Years a Specialist.

For the past 19 years Charles G. Pape, of Fort Wayne, Ind., has devoted his time and attention to the perfecting of "Pape Strain" S. C. Black Minorcas. We are just in receipt of a very pretty two color mating list which he has issued, telling just how and why his birds are perfection. It is illustrated with photos from life, unretouched. Tells all about his stock, day-old chicks and his guarantee on eggs. All in all it is a very complete catalog and if you are at all interested in Single Comb Black Minorcas it will pay you to write him, for if anyone knows Black Minorcas he is the man. Address Charles G. Pape, 1617 N. Cass St., Fort Wayne, Ind.

Single Comb Reds.

Mrs. Jennie Warren, owner of the Bell-Vista Farm, Mentor, Ohio, took a trip to the Cleveland January 7th show, entered her Reds in a class of 250 birds, and captured 3rd cock.

It was Reds purchased of Mrs. Warren that took 5th pullet at Madison Square Garden and 2nd pullet at Grand Palace Show. In fact, her birds can always be accounted among the winners. She has a strictly high class farm and devotes her time and attention to perfecting her Single Comb Reds. Her mating list is just from the press. We note that the prices are very reasonable, so be sure to write to her. Address Bell-Vista Farm, Mentor, Ohio.

1914 Cleveland Winner.

First cockerel, first pen, first and third pullet and second and third hen was the record of our friend. R. D. Owen, at the recent Cleveland show.

Mr. Owen breeds Silver Laced Wyandottes and that he breeds good ones is shown by this winning. He is a fine gentleman to deal with and I can assure you that any orders placed with him will receive careful and prompt attention. Before you buy any eggs or stock write for his prices. Address R. D. Owen, Creston, Ohio. H. H. Coburn.

New Mating List.

The mating list of John S. Martin, of Port Dover, Ont., Canada, has just reached our desk and we hastened to congratulate him upon the very artistic manner in which it is gotten up. There are fifteen half-tone pictures showing some of his best birds, also a few views of his big plant. It gives a list of his big winnings, several pages of valuable advice on how to raise White Wyandottes, his several pens, prices, and he reproduces several letters from his many satisfied customers. If you are in the market for White Wyandottes, it will pay you to write for this catalog. Address John S. Martin, Port Dover, Ont., Canada.

Importance of Properly Raised Baby Chicks.

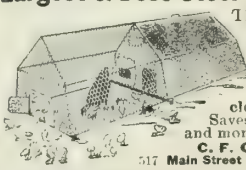
It is sometimes said that any kind of incubator will hatch out a baby chick, but it requires the most careful attention as well as the best appliances to brood a baby chick after it is hatched.

While incubation is important, and a well hatched chick is easier to raise than a poor one, yet the best hatched chick cannot be grown to the best advantage with poor brooding equipment.

First, the Hover must be as nearly like nature as possible. This means that there must be no corners, the Hover must always be warm, it must be easily gotten into and easily gotten out of, and the air must be pure and fresh. When the chick wants fresh air, it can go out, and when it wants warmth it can go into the Hover.

Another important factor of the successful brooder of Hover is that it must be readily accessible. If it is necessary to get down on the floor to attend to the lamp, or igf nails must be driven or torn up to move the Hover, the attention will be slight and the chicks will be left in a wet and dirty Hover.

The little details are what count in the raising of baby chicks. This means that they must be given attention every day. Cumbersome, complicated brooders are anuisance, and the attention given them is little and not sufficient.



Experience has proven that a round Hover with central heat, can be more easily attended to than any other, as the circular hovering capacity prevents crowding and the hover can be easily moved.

The International Sanitary Hover, manufactured by the Hover Incubator Mfg. Co., Box 511, Browns Mills, N. J., has proven on many of the largest poultry farms, to be the most successful of all the hovering devices.

It only weighs 30 pounds, and to set it up you have only to set it down; easily moved; no nails to drive or platforms to build; made of galvanized iron; fireproof. It will mother 100 chicks easily. Lowers death rate of chicks by great numbers. For sale at all dealers.

Prepares and strengthens them for regular ration. Saves trouble and worry.
Lessens Leg Weakness
Guaranteed to satisfy or money back. 25 lbs. $1.65, 50 lbs. $3, 100 lbs. $5.75. Small sizes 10c, 25c, 50c and $1.
Conkey's Lice Powder
Dusted on sitting hens rids them of lice and keeps chicks free from these disease breeding pests. 10c, 25c, 50c and $1 pkgs.
The G. E. Conkey Co., Cleveland, O.

EG-O Milk Albumen.

While a number of poultry-men and people who raise poultry may have solved the question how to get hens to lay eggs and to develop the hen so she will lay the full normal size egg, which it is possible for her to lay, the greatest number of people are still asking these questions and are looking anxiously in every direction for the answer.

Some localities possess unusual facilities for helping out the poultry man, they may be near a milk station and get lots of skim milk cheap or they may be near a meat distributing center and be able to get scrap in sweet nice condition, but there are thousands and thousands of poultry dealers big and little scattered all over the United States who are not situated this way.

One Statistician has figured that if every hen in the United States should but lay one more egg per year the annual increase would be thirty million dozen eggs—this gives some idea of the number of hens in the United States and the number of people interested in the industry and all are eager to get the extra egg. To this large army of poultry owners now comes a message of hope and that hope is the name at the head of this column.

As a food product for chickens—as a stimulant towards egg production—this Eg-O MILK ALBUMEN is comparatively a new thing, inasmuch as it has been on the market only a few years, but in reality this product is as old as the hills itself—its good qualities never have been disputed wherever it has been possible to feed chickens on milk. The effects on poultry life from such milk food have always been well known and highly appreciated; but commercializing this by-product, putting it in shape that will bring it within the reach of poultry breeders, getting an article that will keep its purity and sweetness in hot weather or cold, that can be fed either in winter or summer without detriment to the chicken, that has only been accomplished at a comparatively recent date, in the manufacture of this Eg-O MILK ALBUMEN.

At certain seasons of the year there is a surplus of skim milk; it cannot be preserved in its natural state, and chemistry solved the problem by turning this surplus of skimmed milk into Caseine used by manufacturers in the coating of fine glazed Wall Paper, the Whey into Sugar of Milk, which is used as a food for infants and invalids, the coating of pills and other pharmaceutical purposes.

When this Caseine and the Milk Sugar are extracted and the water evaporated it leaves a white granular substance which is this ALBUMEN—from every hundred pounds of milk it is only possible to recover two or three pounds of ALBUMEN. So it will be readily understood that it takes a large quantity of milk to make a very small quantity of Albumen and a very small quantity of Albumen will sufficiently stimulate a very large number of chickens. Its chemical composition was in every way identical to the white of an egg and this immediately suggested it as the most valuable stimulant for producing and developing eggs.

In this connection the attention of our readers is called to the ad. of Innis, Speiden & Co., (est. 1816) Room 100, 120 W. Kinzie St., Chicago, Illinois, who manufacture this MILK ALBUMEN POULTRY FOOD. They will be very glad to send you free sample and full particulars regarding their product if you will send your name and address and mention this Journal.

S. C. White Leghorn Baby Chicks

We Have No Other Breed

By concentrating all our efforts in improving the qualities of our breed of fowls, we are in a position to offer you chicks from breeders possessing unsurpassed utility combined with exhibition qualities ,and at prices asked by others for the ordinary strain. Our advance during the past season in perfecting the OLD RELIABLE SPRING WATER STRAIN has been marvelous.

We have among our breeders both male and female birds that have won first prize as singles and pens at some of the leading Eastern Shows.

We guarantee chicks hatched from eggs laid by our breeders only and their safe delivery to you.

Join our army of satisfied customers. You must be satisfied before we consider a transaction closed.

Order early, thereby assisting delivery on desired dates.

Eggs for Hatching. 90% fertility guaranteed.

We also offer choice breeding cockerels at tempting prices. Mammoth Incubators. Capacity 20,000 Eggs at one sitting. Write for free illustrated booklet.

SPRING WATER POULTRY FARM

Frank J. Eppele, Prop. Stockton, New Jersey

Ask the Breeder?

Not the ordinary breeder, but the one who is successful, the one who has the heavy laying hens and whose fowls gain maturity early. Just ask him the cause of those fully developed fowls and large egg baskets.

Ninety-nine times out of one hundred, his answer will be, fowls must be fed flesh food.

The small raiser of poultry doesn't seem to realize that no matter how few or how many birds he may have, it is absolutely necessary that they be given the correct amount of attention and fed properly. If you give fowls attention and feed them properly, you will find that at the end of the year, your profits have doubled themselves, your feed bills are less and the egg basket is heavier.

Proper feeding means meat in some form and the best and cheapest meat food is "Hines Meat Scraps."

The feeding of these "meat scraps" means better and healthier fowls and heavier egg baskets. It is sold under a positive guarantee of money refunded if not entirely satisfied. Look up Hine's ad. in this issue, then write for a free sample. Address Hine Bros. Co., Union Stock Yards, Chicago, Ill.

Advertising and Satisfaction.

Two great words, two that go a long ways towards the success of a business. You must advertise, then when you get the orders you must give the customer satisfaction. That is the sum and substance of a little talk made to me by R. J. Elliott the other day. He told me of how the A. P. J. had been bringing him results, then of how he made an extra effort to satisfy everyone, with the result that he is entirely sold out of grown stock with the exception of a few high class cockerels. Along with this he has mated 350 high type pullets and 200 yearling hens. This enables him to handle a large egg and baby chick trade. Located the way he is at Mansfield, Ohio, he can ship you promptly by U. S., Wells Fargo or Adams Express.

The reorders he gets year after year are the best proof that he sends his customers the right kind of stock and eggs. I have seen these Elliott Strain S. C. White Leghorns and do not hesitate to recommend them. Look up his ad and write for prices. Address, Elliott Poultry & Fruit Farm, Mansfield, Ohio. —H. H. Coburn.

Safety First.

The National Poultry Butter and Egg Association advise us that there are thousands of dollars worth of eggs broken each year, in transit. This loss can be eliminated if a good egg carrier is used.

A carrier that has been pronounced perfect, by some of the best known breeders, judges and experiment stations in the country is the "Regal." And to show the strength of this carrier, we herewith print a picture of three men standing on a Regal egg carrier filled with eggs.

This would hold three more with perfect safety. With this carrier everything is complete, even a paper to wrap each egg in. It's real worth is shown in the thousands of repeat orders received each year, so if you intend to ship eggs you owe it to yourself to try the "Regal." For prices write to B. W. Plane, Belvidere, Ill.

Silver Wyandottes.

There is more interest in Silver Wyandottes today than has ever been known in the history of this breed. We have had Silvers for twenty-five years, but never have we noticed such a good hearty earnest interest in this breed. In the language of a large breakfast food advertiser, "There is a reason for it." Now what is the reason? In the first place, in the National Egg Laying Contest at Mountain Grove, Mo., the greatest egg laying contest ever conducted, the Silver Wyandottes, as a whole, averaged more eggs for the year 1912, than any of the other thirty varieties represented there; and for the year 1913, averaged one hundred and seventy-two eggs against one hundred and seventy-three for the best record of any other breed, but for the two years, the record was largely in favor of the Silver Wyandottes. In addition to this record as the best layers, it is also worth noticing that the Silver Wyandottes produce this result on an average quantity of feed, probably a little more than a few varieties, but considerable less than any of the other popular varieties. This may be accounted for to a large extent by the active, hustling, industrious disposition of the Silvers.

Finally and last, but not least, the Silvers today are better in quality than ever before, and that means in the eyes of many at least that they are the prettiest chicken that grows. We have then the best all-around chicken, the prettiest chicken and the best money-maker for anyone that has good Silvers, and especially for him or her that will produce better than we see in the big shows of the country today.

In conclusion, we will state that our Club, "The Silver Wyandotte Club of America," was organized in 1891, with ten members. We have today more than 300 members, in good standing, from all parts of the country. We will have our annual club meeting at Chicago, in De-

MUNTZ'S WHITE LEGHORNS Great Win at Chicago Coliseum Show, 1913

cember, 1914, in connection with the Chicago Show, and the prizes in sight now justify us in saying that more than five hundred dollars will be up, which also justifies us in saying that this will be the greatest Silver Wyandotte show ever held. HENRY STEINMESCH, President Silver Wyandotte Club of America.

Eastern Breeders Notes.

The Houdan breeders have a real live champion in Mr. James Abernethy of West Pembroke, Maine. At Boston, with the great class, he was a happy man indeed and much credit for this great class was due to his efforts. His winnings were first pen and hen. The pen was a great collection of quality, well mated, even in color, and of beauty form. Let us all now help to boom this old favorite. They are a practical and worthy breed.

At Boston also we met for the first time Mr. J. L. Metzler, Findlay, Ohio, another ardent Houdan fancier and breeder, who won cock 3, hen 5-6, cockerel 1, pullet 5, pen 3. His winning cockerel was a truly wonder in form and color, we mention him elsewhere.

Mr. Paul Klingbeil, Walpole, Mass., one of the original breeders of Partridge Rocks, entered for display only at Boston this year, having sold several winners there. At the late Madison Square Garden, New York show, he won cock 2, hen 1, pullet 1, pen 5. Mr. Klingbeil offers for sale a few choice females and a rare collection of males at right prices. This line has been a winner for years and is reliable.

Mr. M. F. Delano, Vineyard Haven, Mass., looked over the Boston show on his way to Pittsburg, where he made the greatest record we know of in White Wyandottes and White and Buff Orpingtons and S. C. Reds, winning sixteen of a possible twenty-one first prizes, a total of twenty-three silver cups, etc., also shape and color specials. Mr. Delano has a very large stock of choice birds, write him your wants, he assures absolute satisfaction to all patrons.

The Wonder Strain of Columbian Wyandottes, bred by Mr. James F. Perkins, West Stoughton, Mass., have had a most successful season by winning at Boston, Brockton and Providence. At Boston's great 1914 show they won cock 1, cockerel 1, pullet 3, old pen 1, special for best Columbian Wyandotte in the show and male shape special. At Brockton, cockerel 1-2-3, pullet 1-2, hen 2-3, pen 1, special for best Columbian in show and specials for color and shape male and female. At Providence, cock 2, hen 4, cockerel 3, pullet 1. This pullet won special for both shape and color and special for best Columbian in the show. Mr. Perkins has several choice cockerels for sale.

The Barred Rock wizard, Chas. H. Welles, Stratford, Conn., has sold the winners for many shows this year. We lately paid him a short visit and found him all mated up. His pullet breeders look better than ever. They have size, shape and color and the best possible style of barring. This line has the quality that has won the country over. In cockerel breeders, Mr. Welles has four very strong pens all headed by males from his first prize New York cock. His circular and mating list is free to all.

Mr. Harold Tompkins, breeder of Rhode Island Reds, Concord, Mass., beside the records made at New York and Boston, exhibited at the Rhode Island Red Club Show, New Haven, Conn, where his winnings were most complete and as follows: cock 1-4-5, hen 3-4-7, cockerel 1-2-3-7, pullet 1-7, pen 3, best display, A. P. A. Special for best cockerel in show and all club specials for color and shape on male and female. Mr. Tompkins has won his way to the front by successful breeding and has a fine line of birds.

Mr. C. E. Riley, Ebenezer, N. Y., breeder of R. C. Reds, exhibiting at Rochester, N. Y., in January, won as follows: cock 2, cockerel 1-2, hen 1-3, pullet 1-5, old pen 1, young pen 1-2, best display and many specials. This with his recent Buffalo winnings and at other shows well tells the story of this line.

Mr. H. P. Deming, Robertsville, Conn., breeder of S. C. Reds, has been a breeder and winner of note for many years. At the late M. S. Garden New York Show

he won, among other prizes, first prize pullet in a class of 36 birds. This pullet is of sensational quality, extra fine in form and of richest quality in color. His entire line shows strong breeding worth and is the kind we like to recommend to our readers. Get his mating list and mention the A. P. J. always.

The Pine Lodge Farm Co., South Lincoln, Mass., breeders of Blue and Cockoo Orpingtons, with Mr. W. H. Depper as the president and Mr. Art C. Gilbert, manager, the originator of these Orpingtons promises well for these varieties. Mr. Depper has bred them here for some years and in securing Mr. Gilbert, has made a master move. From the first the Blue Orpingtons have been popular here. They are a staple variety bound to rank with the best.

We lately visited John S. Martin at his Port Dover, Ont., home and viewed with interest his great flock of White Wyandottes. Mr. Martin has now upwards of 500 young and they look very good. His matings this year are a select lot of extra quality, the males strong, clean fellows with beauty combs and heads and deep, broad bodies and full tails. His mating list should interest you, it is free for the asking.

Mr. Henry D. Riley, Strafford, Pa., made a grand win at the Indianapolis, Ind., show, the annual club show in a great class: cock 1-4, hen 1-2-5, cockerel 3-4-6, pullet 1-5, pen 2, pullet pen 1, special champion male and many other specials, also note his Boston winnings.

Now is the time to feed French's Poultry Mustard. This is the "original" and reliable brand. Send to The R. T. French Co., Rochester, N. Y., for booklet and always mention the A. P. J.

The "Spir-O" Leg Bands made by Mr. P. S. Riggs, White Plains, N. Y., have reduced the price of their bands from 25 to 30 per cent. These popular bands are cheap at any price and best answer the purpose of banding and marking lines of breeders. Know your birds by the color of leg bands and save time and handling.

In our next we will have a report of the Aldrich White Orpingtons, Columbus, O., having spent a day there lately looking over their line which is most pleasing. Their season's winnings at New York, Chicago and Allentown is a wonderful record for these farms. Mr. L. Rawnsley is on the job and promises more smashed records next year.

We have just received a copy of C. N. Myers, Hanover, Pa., catalogue and mating list. Breeders interested in pullet line Barred Plymouth Rocks should ask for it.

Oakland Farms, Trenton Jct., N. J., S. C. White Leghorns and S. C. Reds, offer baby chicks and eggs for hatching. Their stock is right, strong and vigorous. Write them for prices and particulars. They have one of the largest and best equipped plants we know of. Mention A. P. J.

Mr. L. C. Bonfoey, manager of the Bonnie Brook Poultry Farm, Saratoga Springs, N. Y., made his latest great record at the late Boston show in S. C. White Leghorns and White Rocks. He has been for many years one of our best breeders and his friends all wish him well in his new position.

The Wayne Poultry Farm, Mr. F. W. Christie, owner, Stony Point, N. Y., breeder of S. C. White and Brown Leghorns, make a specialty of baby chicks and eggs for hatching. This is one of our oldest lines and a reliable one, having been bred for highest practical quality for 14 years. Catalogue and any information for the asking.

Fairfield White Rocks won the honors at Baltimore's best and latest show. Note his record elsewhere in his adv. and write him your wants. Mr. H. W. Schnitzer has bred this line for many years and has won on them at several of our most prominent exhibitions. Write him today at Fairton, N. J., for circulars, etc.

When in want of Partridge Wyandottes address Mr. Chas. H. Wood, Mutual Bldg., Worcester, Mass., and have him tell you how to produce New York winners.

The Maryland Leghorn Farms, Cambridge, Md., with Mr. W. C. Bowman,

Single Comb White Leghorns Exclusively

D. W. YOUNG'S STRAIN

The finest in the World. Bred for their great winter laying qualities. Milk fed. Over 2,000 layers on free farm range. Largest plant of high class breeders in the world. At farmers' prices. Eggs for hatching now ready in any quantity at $6.00 per 100, no order too large. Baby chicks $12.00 per 100, capacity 6,000 weekly. Now booking orders for March and April delivery.

My book, "Profits in Poultry Keeping Solved" shows where the money is, price $1.00. 5th edition given free with all $10.00 orders. Satisfaction guaranteed. Descriptive circulars free.

Edgar Briggs **Box 144** **Pleasant Valley, N. Y.**

mgr., is on the high road to greater things. They won first S. C. White Leghorn pullet at the M. S. Garden New York show and nearly all the honors at Baltimore and have a line with great quality and promise. Baby chicks a specialty, circular free. Mention A. P. J.

———o———

Why White Rocks Are Bred at Rancocas.

Rancocas Poultry Farm, Brown's Mills, N. J., was started as an egg farm, ten years ago, with about 3,000 S. C. White Leghorn layers. The climate, soil and easy shipping facilities to New York City make southern Jersey almost an ideal location for a large egg farm. The business has gradually grown until in 1910, we were wintering about 18,000 females. Our phenomenal growth and success had attracted attention throughout the poultry world, and we began getting inquiries for hatching eggs, baby chicks, breeding stock, etc. This gradually caused a radical change in our business plant. Instead of being a farm whose principal object was the production of table eggs for New York City, our principal income became the selling of hatching eggs, baby chicks and breeding stock to improve the flock of others. We went after the new order of business just as enthusiastically as we had after the producing of table eggs in earlier days. With our advertising and publishing of our "Million Egg Farm" book, we began to receive approximately 100 inquiries a day during the busy season.

On this morning, February 12, we received 150 inquiries. Many of these inquiries asked for information and advice about the heavier breeds. People from foreign countries occasionally sent us sums of money for breeding pens of our white leghorns, and for breeding pens of some of the heavier breeds, so partly in self defense, we decided to add a heavier breed. After giving several of the popular breeds a trial, we decided that the White Plymouth Rock came the nearest to being the ideal general purpose fowl for the following reasons:

In the first place, we believe that the general shape as advocated by the Plymouth Rock breeders of all varieties is most conducive to health and to heavy laying of any of the middle weight breeds. And it seems to be one of the unwritten laws of the poultry business in this country, that the white variety of all breeds are the most popular. Also White Plymouth Rocks, at the different egg laying contests that have been held throughout the country have made a better general average than any other breed. Our foundation of White Plymouth Rocks purchased three years ago, included the entire flock of M. L. Chapman, who had been one of the most successful exhibitors at Madison Square Garden and Boston for the preceding five years. Mr. Chapman came with us at that time, and has since had charge of all our show stock, which is located on a separate farm about one mile distant from the big plant. We will add that we have never been able to keep up with our orders either in breeding stock or hatching eggs, although we have increased our flock so that it now numbers several hundred birds.

———o———

A Woman Who Knows.

If you were to ask poultry judges what one woman ranked, as a real breeder of high class Anconas, their answer would be Mrs. Guy Blencoe. This little lady just has the habit of taking those Rose and S. C. Anconas she has and winning prizes from Boston to Seattle. At the last Chicago Coliseum Show, she captured 1st pen, 1st cockerel, 1st and 2nd pullet; at Madison Square Garden it was 1st and 4th pen. Beyond a doubt there is no one in the business today who knows Anconas better than she does and when you buy eggs or stock from her, you are buying the very best that can be obtained. She is a mighty fine lady to deal with, will give you a hundred cents worth for a dollar and take care of your orders very promptly. Write her for prices. Address, Mrs. Guy Blencoe, Alma Centre, Wis.—H. H. Coburn.

———o———

Scored 95½ Points.

B. E. Graham of Manteno, Ill., is in receipt of a letter from one of his many customers, informing him that the White Plymouth Rocks he had sold him, won at the Pontiac, Ill., show as follows: 1st cockerel, which scored 95½ points; 2nd and 4th pullet and silver cup for best pen.

A Noted Barred Rock Farm.

That the west is becoming prominent for the production of high class Barred Plymouth Rocks is demonstrated by the wonderful advancement of the Henderson strain during the past 20 years. The west cannot only boast of producing the best birds of this variety in the world, but can also claim the largest exclusive Barred Rock farm in the world, which is located at Bridgeton, St. Louis county, Missouri, and owned by Judge W. W. Henderson.

Bridgeton is situated in the Florissant valley a few miles out of St. Louis, and this particular section is known as the garden spot of the United States and has the reputation of producing the best of

Prize-winning cockerels on the farm of W. W. Henderson, Bridgeton, Mo.

everything in the agricultural line, as well as best Barred Rocks that are being shown today. The Henderson farm is composed of 50 acres, which is devoted exclusively to Barred Plymouth Rocks and the equipment is second to none that we have ever seen.

On entering the poultry farm we passed through the large breeding pens, 10 in number, in which all the matings for Spring breeding are confined, and among the specimens in all of these pens, in both the cockerel and pullet lines, we found many winners in America's largest shows. Each pen has a range of about ½ acre, under the apple orchard, and the houses are of the open front, combination order with scratching pens attached. These pens, as we found them equipped, are ideal for breeding purposes. In passing from these pens to the main poultry farm, we passed the attendant's quarters, a neat five-room cottage, standing on the brow of a hill which overlooks the entire plant.

Immediately behind the attendant's cottage is the feed house, which is one of the most important houses on the farm. This house is equipped with power and machinery to make every variety of chicken feed known. On the first floor of this house is a gasoline engine, attached to a line shaft to which grinding mills, bone cutters and mash cutting machinery is attached by counter shafting. Conveniently along the walls are down spouts, through which grain, of different kinds, is lowered to the first floor, for mixing and grinding. This house is also equipped with feed-cooking apparatus, which is very essential in the production of early eggs for hatching.

The upstairs of this house is divided into several bins into which car loads of grain are stored. We were told that by maintaining a house of this character 30 per cent of the cost of feed, used in the usual way, is saved.

Immediately off of this feed house are the various colony houses (10 in number), with large yards in which the maturing young birds are graded, viz.: exhibition cockerels, exhibition pullets, pullet bred cockerels and cockerel bred pullets. These houses and yards are also used for the different lines of breeding birds after the breeding pens are broken up.

To the east of these is located the cockerel house, which accommodates 100 birds, giving each bird a pen 3½ by 6 feet. These pens are so arranged that each bird is kept to himself without any chance for injury, by fighting, etc., and in this house birds are conditioned for the show and made ready for shipment on orders received for birds to be shown at any special time. The keeping of a house of this character, on a large farm, makes it possible to have exhibition specimens in the pink of condition when they are to be shown. The recent exhibits of the Henderson strain of Barred Plymouth Rocks at the leading poultry shows, evidenced the fact that a house of this character should be maintained on every poultry farm, large or small.

Directly east of this conditioning house is located the incubator cellar and brooder house. The incubator cellar is 6 feet in the ground with walls extending from the ground about 3 feet and a gable roof. This building is about 24 feet square, properly ventilated with windows and air shafts and is equipped with 10 standard machines with a capacity of 3,000 chicks every three weeks.

Directly in front of the incubator cellar is a brooder house 30 feet in length, with the necessary equipment to handle 4,000 chicks.

South of the brooder house is located 2 large breeding houses. These houses are 126 feet long and 21 feet wide and contain 17 breeding pens each. They are built on a concrete foundation, each pen is 8 feet wide and 18 feet long. The roosting quarters are built of tongue and groove lumber and are 4½ feet long, 3 feet wide and 3½ feet in height and have a drop curtain in front which is lowered in extreme cold weather. These roosting quarters are about 3½ feet from the floor and are in the rear of each pen, next to the long passageway, which runs entirely through the house. Under these roosting quarters are the nests, which are practically isolated from the pens, and the eggs are gathered from the opening in the passageway. Each pen is watered from the passageway by a large porcelain pan, which upon inquiry, we found was used instead of a closed fountain to prevent the birds from injuring their combs, while drinking. The front of each pen is open, with the exception of a wire netting and muslin window, which is raised and latched to the roof and kept that way practically all the time, except in very extreme weather. These roosting quarters are practically a chicken house within a chicken house, from which we were told the most magnificent results were obtained in the production of eggs, from the pens quartered in these houses, during the early spring.

We noticed particularly the arrangement of the roof, which provided a window through which the sun can shine directly

F. N. Perkins says:

I am convinced that my matings this year will produce the best *Partridge Plym. Rocks* it has ever been my pleasure to own. It has been my desire to produce birds that not only would be up to the standard requirements as far as type and color goes, they should also have an inherited tendency for big egg production. I have been successful in producing these qualities throughout my flock and birds of my strain have won the big prizes at the leading shows in the country. If you are looking for that so much desired triple lacing and beautiful rock type or for birds with abnormal egg production, it will pay you to send for a setting or two of eggs for hatching. My elegant mating list containing a fine color plate of these fowls and describing different pens I have mated is free. My art catalogue is considered the finest book on this variety and well worth the 25c I ask for it; contains a large color plate and valuable information regarding this breed. **F. N. PERKINS, 22 Harlem Ave., Freeport, Ill.**

The Last Word

In "Profit Paying" Blue Ribbon Winning Stock

Don't Forget the Almighty Dollar in your eagerness for show room fame.

There's another side to it. Get our 200 Egg Stock, which has been trap-nested for 24 years, and "forget" the empty egg basket or the empty purse. We offer fine breeding males and females at reasonable prices.

Baby Chicks $20 per 100, out of 200 to 248-egg hens.

Eggs for Hatching—$10 per 100; Bd. Wh. and Buff Rocks, Reds, Wyands., Orps., Leghorns.

3 Ribbons at Boston on 4 entries, in 1914, on **Buff Rocks.** My best pullet scored 95½ at one show this year under "Weed" Judge.

I have Chicks and Eggs out of regular stock at $15 per 100 for Chicks, $8.00 per 100 for Eggs.

Write wants. "You have had the rest, now buy the best."

Phosto

(REGISTERED)

A Scientific Preparation of Phosphates.

The 20th Century Product.

Why experiment? Medicine and dead chicks are costly. **Phosto** is the most effective vitalizer ever invented—20 years ahead of the times. **Phosto** contains those elements so necessary to the life of a chick, through the lack of which it has made it difficult to keep them on their feet ever since artificial brooding was attempted.

Don't have diarrhoea and you save the need of a cure; you can't cure it anyway. Weak, puny, slow feathering chicks simply lack **mineral, ash, phosphates. Phosto** supplies this and beautifully. Try it and see. You can no more than save a few chicks that would have died, and you will learn more in 20 minutes than you can gain in a whole life time experimenting.

Remember this, you need no **bone, bone meal, beef refuse** or **packing house products** to get either **fertility, hatchability,** or **livable chicks.** An every-day dictionary ought to tell you that **ash** builds bone and assists in assimilating other food. There is the whole thing in a nutshell.

MISS CAREY of ENGLAND, says:

Phosto is wonderful stuff for young chicks. I had three or four lots inclined to be leg weak. We tried several remedies, but they got worse; and, after losing about a dozen, I gave your stuff a trial. **In three days they were on their legs again.**

Order in $1 and $2 tins, prepaid, for **Poultry.** Literature free.

THE PHOSTO COMPANY
Norwood Park Chicago

on the roosts in the sleeping quarters, thereby naturally providing the very finest kind of a disinfectant and preventative of vermin. The breeding pens of this house consist of the best breeding Barred Rocks in both the cockerel and pullet lines that we have ever had the pleasure of seeing. In the cockerel matings we noticed male birds that would do credit to any show room and we were told among them were Madison Square Garden, Chicago and St. Louis first prize winners, as well as sweepstakes birds in a great many other shows. The dark females in the pens, with these standard males, were of the very finest quality imaginable. In opening up a few of the females we found that narrow distinct barring which is so essential in the production of high class exhibition males. In the pullet mated pens were some of the grandest females and they, like the males in the cockerel mated pens, were winners and descendants of winners since the world's fair in 1904. The pullet bred males in these pens were very conspicuous on account of their very even surface color and grand type. We could not see where any improvement could be made in the mating of any of these pens and each and every one of these breeding pens showed all that could be desired in Barred Plymouth Rocks.

It would be well to note here that in going over this array of breeding pens it was like visiting a large poultry show, and anyone interested in Barred Rocks will be more than repaid for visiting this plant, where more high class Barred Rocks can be seen than were ever seen at any poultry show we have ever attended. In other words, these breeding houses are a large poultry show in themselves. The finish and equipment in these breeding houses is the best that we have ever seen. Each and every pen is equipped with appliances which make a natural summer condition in winter; this is where the success of the poultry business lies and enables the Henderson Farm to produce large fully matured specimens for the early fall shows.

The two breeding houses above described are without a doubt the finest in this country and we say this without exaggeration, that it will pay anyone who is interested in Barred Plymouth Rocks to visit them.

Immediately off of these two large breeding houses, in the orchard, is located the storage shed for coops that are used on the range, and next to this is the house used for the brooding of chicks in large numbers. This house is 16 feet by 30 feet with an attendant's room in one end and a brood room in the other. No expense was spared in the construction of this house. From its appearance it is the only house that we have ever seen that was especially constructed for this purpose. Surrounding this house in the orchard are numerous colony houses on the growing range, which is well shaded by the apple orchard and affords an ideal condition for the growing of poultry.

We noticed the best system of watering we have ever seen on the growing range and were told that by this system the birds on the range are never without water and also very little labor was required to keep the thousands of birds that were grown on this range each year watered at all times. The system consists of casks and barrels,

INCREASE YOUR EGG YIELD

I have imported direct from Tom Barron of Catforth, Eng., a pen of S. C. White Leghorn Pullets mated to a Tom Barron Imported English Cockerel from a 260 egg hen. They are from the same stock as his famous 282 egg pullet which record was made in America in the International Laying Contest. No better breeding stock can be procured. Settings from this pen will produce blood lines that will **breed layers. Prices — $8.00 for 15 eggs. $15.00 for 30 eggs.** My 1914 importation of Tom Barron English Birds include a number of S. C. White Leghorn Cockerels. I have mated them with my best pedigreed laying birds. Hatching eggs from these matings, $3.00 for 15 eggs—$7.50 for 50—$13.00 for 100. **Rose Comb White Leghorns**—These birds are raised on my own plant and bred for high egg production. They are mated to strong, vigorous, extra white, egg type cockerels. **Prices**—$1.50 for 15 eggs—$3.50 for 50—$6.00 for 100—$50.00 for 1,000. Rose Comb day old chicks from these pens, $7.00 for 50—$12.50 for 100. Safe arrival guaranteed. **Full Blood White Wyandottes**—Write for prices on hatching eggs and day old chicks. **Free illustrated catalog,** containing prices and matings of high pedigreed breeding birds sent upon request. Champion White Runners

Our true Spencer strain White Runner ducks, lay very large, snow-white eggs—no green, or tinted, and outlay our Corning-Rancocas White Leghorns. Undoubtedly by far the greatest paying utility proposition, for farmer and back-lotter, extant. Strictly white duck eggs are what our large city bakeries want for cake and pastry making, at as high as 20c per dozen more than for best chicken eggs. We tell customers where to sell. Some strains of White Runners are descended from stock imported from Germany and are mixed with Pekin blood; consequently lay many green eggs—most undesirable—also considerably less eggs annually than true Spencer stock; developed in California by C. C. Spencer, through systematic selection, from Fawn and White Runners only as a basis, hence are true, racy Runner stock, superior in every way to "Fawn and White" Runners, which they are fast superseding. Our stock is descended from Chicago and New York blue ribboners. We warrant that every customer will be delighted and astonished. Very fertile fresh eggs, shipped prepaid: 12, $2.50; 24, $4.00; 48, $6.00; 100, $10.00. Leghorn eggs, just half, prepaid. Infertiles replaced once, free. Instructions for raising and handling sent to customers. Order direct from this ad. No delay, no waits, no letter writing. On our own $30,000.00 farm—paid for.

placed here and there, in the shade of the trees, with a wooden faucet in the bottom through which the water is allowed to drip into a slatted pan. These barrels are filled with water once a week and through this method fresh water is always available for the fowls.

The shipping room, which we next visited, is directly in front of the cockerel house, where every necessity for the proper shipment of birds and eggs, for hatching, is kept. The Henderson Farm is fitted in every particular for the breeding, growing and distributing of high class Barred Plymouth Rocks and from the detail that is carried out each day in the care of the great flock, it is not to be wondered at that the Henderson strain has gained such prominence throughout the world..

The farm has recently exported to Rio de Janeiro a large consignment of Barred Plymouth Rocks to take the place of those recently imported from England by the Brazilian Poultry Association. The farm is exporting a great many birds, and the business of the farm, throughout the United States and Canada has been very large. Last year the stock was sold down to the birds that were retained in the breeding pens. The business policy of the farm has been to furnish just a little better grade of Barred Rocks than can be obtained elsewhere for the money and when buying stock the customer is informed that if the birds do not suit in every particular, he is at liberty to return them and his money will be refunded immediately. This policy has proved successful for the reason that the records of the farm show that practically no birds have been returned, on account of being unsatisfactory. The guarantee on eggs is most liberal and we were told that every effort is made to satisfy the customer, at any cost, which has resulted in very few complaints from eggs shipped for hatching purposes.

The personality of the owner of this farm, Judge W. W. Henderson, is most impressive, and anyone who has ever visited the farm or done business with him, holds him in the highest esteem. He started keeping fancy poultry some 20 years ago, as a hobby, because of his love for chickens, and we doubt if there is any man in the western country today who has done more for the poultry industry than W. W. Henderson. We assure anyone that contemplates purchasing Barred Plymouth Rock stock or eggs, that they will get the very best of treatment and the best blood lines in Barred Rocks that it is possible to obtain in the Henderson strain.

At this writing the Henderson Farm catalogue for the season of 1914 is going to the press, and from the description we have of it, it will be one of the best catalogues ever issued on Barred Rocks. It is a combination catalogue mating list showing the advancement of Barred Plymouth Rocks since the World's Fair, 1904, where the Henderson Farm won First Prize Pullet, up to the Chicago Show of 1912, where they won first prize cockerel and grand champion male in the largest class of Barred Plymouth Rocks that was ever shown in the middle west, in competition with America's foremost breeders. The catalogue will also contain a bird's-eye view of this noted farm with a minute description, also a description of each individual bird in the 30 pens, which are mated for the season of 1914.

It will be worth more than the expense incurred for anyone who is interested in Barred Rocks to visit this farm, and those who cannot visit the farm personally should write for their 1914 catalogue mating list.

ATTENTION! Formula for killing all lice, vermin, etc. on the hen and in the nest for 25c silver.

JOE-PYE Orpingtons

"CHAMPION NEW YORKER"
Greatest Buff Orpington Sire and Show Bird in the World

Madison Sq. Garden
1913-14

1st and 4th Cock
4th Cockerel
4th Pen

In the last five years my male line has won 1st at the "Garden" four times. One of these five years I did not show, but two cockerels from eggs I sold, that year won 2nd and 3rd, beaten by an importation. This is an unprecedented record.

To this add my great win on males at the Palace, N. Y., at Boston and many smaller shows for the past three years and the fact is well established, beyond dispute that I have the strongest male line in the country. And it is a "line" I have bred—all related—not transient "sports" that happened to win but different birds of this line that have been awarded highest honors by many judges.

With this large winning at the largest shows, on males I bred, I am able this year to put together a most remarkable and consistent lot of matings. My free mating list describes pens in detail.

Guarantee on Eggs

I make the generous offer to replace all infertile eggs once free of charge.

"Growing Dollars With Oxygen."

That the subject of artificial incubation, and particularly that branch of the subject having to do with what is known as the "dead in the shell" chicks, is receiving more than passing attention at the hands of the poultry experts of the country is shown by the following extract from a lecture recently delivered by Dr. J. Oren Bearstler, president of the Pottsville, Pa., Poultry Association. He says in part:

"When I think of the handicap under which our American poultrymen have for years labored, by reason of the losses that have come from the 'dead in the shell' chicks, and its colleague in crime, 'white diarrhoea,' it is little wonder that so many of them have given up the business in disgust.

"As I reflect, how the Poultry World has for years paid a golden tribute to this scourge of poultrydom, amounting, no doubt, to hundreds of thousands of dollars—even millions—it is really to be marveled at, that so many of them have stayed in the game. It is little wonder, gentlemen, that this subject has received such extended and careful attention at the hands of the State experimental stations. I make the statement, believing it to be true, that the 'dead in shell' chicks have cost the poultrymen of this country more than a million of dollars annually.

"You all—or many of you—will recall when I invited you to my house to see the results of my first hatch with this Oxygen Vitalizer. You can all testify to the wonderful results that it produced. It is the value of Oxygen, or how to grow dollars with oxygen that I want to tell you about tonight. Oxygen and its use in artificial incubation, as a means for putting an end to the 'dead in shell' chicks is but an application of well known medical truths. In my judgment, its value in artificial incubation, is not half realized.

"It's possibilities are really undiscovered." We have only taken extracts from this very interesting lecture, and what we wish to say in connection with it is, that we will be pleased to furnish the booklet that Dr. Bearstler refers to, on application of all those who own or operate an incubator. Address Reliable Poultry Specialty Co., Alexander, N. Y.

Looks Good.

If you ever make a trip to West Virginia, be sure to stop over in Pine Grove, It is the home of ribbon winning R. C. Rhode Island Reds, owned by E. J. King. Mr. King has a long list of this season's winnings, but the latest one was at Wheeling, West Va., January show, when he won first cockerel, first pen, fourth hen and fourth cockerel. His mating pens are headed by these birds and his prices are very reasonable. Look up his ad. and write him at once. Address E. J. King, Pine Grove, West Va.

Raise large, healthy, quick growing chicks with **Beck's Economy Brooder Coop and Fireless Hover**—100 chick size. (The best outdoor lampless brooder on earth.) Build them yourself. Send 35c (no stamps) for plans and instructions. **RUFUS BECK, Box A-25, Sullivan, Wis.**

R.C.MINORCAS

First prize winners New York, Chicago, St. Louis and elsewhere. Trap-nest bred for egg production. Stock and eggs for hatching, at all times. Catalogue free

POULTRY FLATS

Are Sure to Revolutionize Poultry Raising for Profit, Because:

1—You need no brooders, and these alone are a great expense.
2—Each Flat will brood and raise 600 chicks, and do it right.
3—Each Flat is a unit—a basis of calculation.
4—Each Flat will house and winter without fire 72 old birds.
5—All work is done under cover and you need not move three feet from one spot in doing it—no exposure to weather for man or birds.
6—Easily cleaned—no lice.
7—You can build one in your back yard.
8—Covers 24x36 feet and includes six runways. Can make runways as large as space will permit.
9—In the Flat you have everything you need, at one cost—a complete plant.
10—If you build a common, ordinary poultry house, your extras will cost more than an Ott Brooder and Winter House combined, and then you only have the old way.
11—One Flat will make you money right off the reel.
12—With a Flat you are starting right. One will make you money. Build as many as your time and means will permit. any one, who is at all handy with tools, can construct one.

Read the book "Poultry Flats" as written by Mr. Edward Amherst Ott, the man that knows and does. One man sold $800 from just one, on a back lot. The book also contains letters from those who have built in twenty-one different states. Read these. Send us 25c, that's all, and we will send you the book and the INLAND POULTRY JOURNAL for six months. This paper is known all over the world as one of the best,—so do this now and you will always be glad. Address

Inland Poultry Journal Co.

BUY A NEW BUFFALO INCUBATOR OR BROODER

Made by the BUFFALO INCUBATOR CO.

CHAS. A. CYPHERS, President

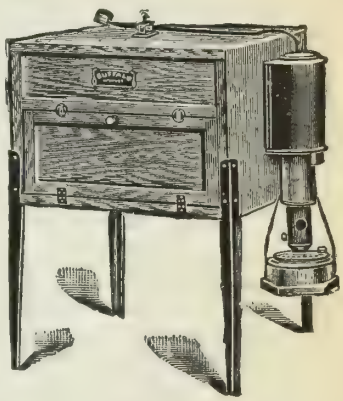
AN INCUBATOR OF STANDARD QUALITY AT HALF THE STANDARD PRICE

If you want to know how and why we do it, get our circular. There is a reason.

Hatches Better Than Others, Large or Small

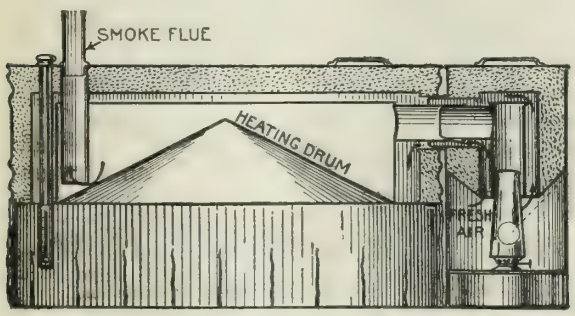
February 24th, 1913.

Dear Sir:—Owing to the unsatisfactory working of my employer's Incubator, I was obliged to borrow one of your Buffalo Incubators from a neighbor here, Mr. L. Robey, and I am pleased to tell you that it enabled me to hatch out 100% of my first hatch, 88% of my second, and nine-elevenths of my third hatch. Mr. G. H. Dowse, my employer, now has ten of your large size machines.



J. S. HICKEY, Wrentham, Mass.

November 19th, 1913.



Dear Sir:—I have used the Buffalo in competition with other standard makes, and have found it so satisfactory that I am sending you my order for three more No. 3 Incubators. Please rush through at once. G. T. FORSYTH, Rutherford, Calif.

January 18, 1913.

Dear Sir:—I have been testing one of your No. 3 Incubators the past two seasons alongside of four other makes. It has given excellent satisfaction. I expect to add five or six new machines next month. L. G. COOLIDGE, Bolton, Mass.

He did, and so will you if you try a Buffalo. One agent in Australia ordered 1,000 Buffalo Incubators this year—his third season.

Buffalo Handy Hover, 100 Chick Capacity

The Buffalo Handy Hovers

The Buffalo Handy Hovers are just what their name implies.

The Buffalo **"Handy"** is a floor level hover. You can set it any old place.

Sanitary—All galvanized iron.

Heats Easily—Walls are heavily packed with good insulating material.

Uses But Little Oil—Flame burns with a white light, which indicates complete combustion.

Hottest at Outer Circle—Heat is brought lowest at that point.

Perfectly Ventilated—Heater is double with fresh air flue.

Handy—Just pick it up and set it aside to clean the floor.

Lamp flame can be seen without stooping. Lamp compartment or heater is attached to hover with "rolled edge slip joint," and is quickly detached for tending lamp.

Has all the good points of others, with thick walls and complete combustion added. Others are thinly insulated and are hard to heat. Other lamps burn a yellow flame, and waste oil. The Buffalo Handy Hover will heat 10 degrees hotter with the same oil consumption; and in a room too cold to use any other hover.

Send postal for fuller description.

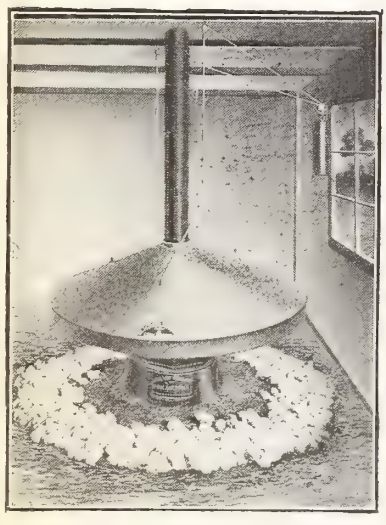
LAYING HENS LIKE THESE

ARE PRODUCED BY USING



HINE'S MEAT SCRAPS AND POULTRY BONE

No successful poultry breeder can eliminate meat in some form from his chicken food. The meat scraps made by us is a highly concentrated protein food. It satisfies the natural craving of fowls for flesh food, insuring health, thrift and vigor—which means "laying hens." This meat scrap contains the necessary ingredients for building up "money-making fowls." Hine's Meat Scraps are endorsed by experiment stations and the world's largest poultry breeders. No matter if you own one or ten thousand chickens you need meat scraps. Just write us and we will send prices and a sample.

Sold on its merits.
If not satisfactory money refunded.

Ideal Coal Stove Brooder

Send For Our Free Booklet
Describing the Ideal Coal Stove Brooder. Price $17, with Automatic Regulator $22.

Save money in raising chicks.

The Ideal Coal Stove Brooder heats poultry houses and broods large flocks, gives 97 per cent efficiency, in some cases as high as 99 per cent; no other system can equal these results. Coal burning and self regulating. Economical, safe and far superior to oil burners. No coal gas, no fumes. Small and large farms are using the Ideal with success. Investigate at once by sending for booklet—"The Merits, Economy and Effectiveness of the One Best Brooder."

The fire pot of the Ideal is the largest; will contain more coal and distribute more heat than any other make of Brooder.

LIBERTY STOVE CO.
Dept. J Philadelphia, Pa.

Another Satisfied Breeder.

The following letter tells its own story; read it, then write for prices:

The Hancock Inoculatum Co., Salem, Va., Gentlemen—It is more than likely that you will remember the correspondence I had with you the latter part of 1912. I think it but fair to tell you of my experience with "OCULUM" since that time. I followed your instructions to the letter with reference to small chicks this last year, and it is gratifying to report that I have not had a single case of roup, in fact no diagnosable disease, whatever, this year. I have used no other remedy and am pretty sure that "OCULUM" immunized my entire flock from the trouble I had a year ago, and I think I had, without doubt, the sickest looking lot of poultry that was ever well kept.

I never have nor ever will lose an opportunity to recommend "OCULUM." Very truly yours, F. W. Ziegler, New York City, Jan. 13, 1914.

It Is Beautiful.

Those three words express a great deal, but they do not do full justice to the catalog just issued by J. Courtney Punderford, owner of the Monmouth Farms, located at Freneau, New Jersey. Page after page could be written but when it was all said it would not express this piece of work. Beautifully illustrated with pictures of the famous "20th Century Dual Purpose Fowls," together with views of the different and numerous buildings, pictures of the new killing and packing buildings. It is complete in every detail, even to a full page picture in natural colors showing a few of these famous S. C. Buff Leghorns.

This catalog must be seen to be appreciated, and if you are in the market for eggs, chicks or stock of Buff Leghorn variety, you should have a copy of this book at once. Address, Monmouth Farms, Freneau Monmouth County, N. J.

Ruby Red.

That is the name of the strain of Rhode Island Reds, bred by Fred W. Oertel of Brighton, Ill. A visit to Mr. Oertel's farm will convince you that it is one of the most up-to-date poultry plants in Illinois. Besides his Ruby Reds he is specializing in Buff Orpington Ducks. He has some very rare quality in these, having won 1st and 2nd drake at the late Chicago Coliseum, this record out of two entries. I recently made a trip to his farm and was greatly impressed with his fine Ruby Reds in the mating pens. He has just issued a handsome catalog, full of rare bargains in stock and eggs. Just drop him a postal and you will receive a copy. Address, Fred W. Oertel, Brighton, Ill.—J. C. Johnston.

STOP Chicks Dying In the Shell

Which poultryman

are you—the one that gets 500 chicks from 600 eggs—or one that gets 500 chicks from 1,000 eggs?

The EFFICIENCY and modern methods in other lines now apply to the hatching of chicks in incubators.

Your chicks die trying to burst the shell—or soon afterwards from white diarrhœa caused by being poisoned by the carbon-dioxide gas they throw off in the air they breathe. During the last three days of the hatch you can save practically every chick and make it vigorous so that it will resist chick ills by using the

Merkley Oxy-Vitalizer

to supply them with moist oxygen. Can be attached to any incubator in five minutes. Self-operating—no watching. One can be used for several incubators Lasts a life-time. Multiplies your profits on every hatch. Write for free literature or better still write for a VITALIZER. The price is only $3.50 parcel post prepaid, and it will buy itself in one hatching.

Merkley Mfg. Co.
238-44 Onondaga St.
Syracuse, N. Y.

CHAS. H. WHITNEY, DELTA, OHIO

A New Leghorn Star in Poultrydom.

A truly remarkable Leghorn winning when the number and quality of the class is considered, was that made by the Willows Farm, South Bend, Indiana, at the recent Indianapolis show. Frank E. Hering of Campine fame, is the proprietor of this farm, although it is conducted under the direct management of that sterling and experienced Leghorn breeder, Harmon Bradshaw.

At the time of the Coliseum show in December, Mr. Bradshaw had been on the plant only one month, and in consequence much of the young stock exhibited there was not as fully matured as he desired. Nevertheless even in the hot competition of the Coliseum, the Willows Farm was among the prize winners both in old pens and in young pens.

However, the lateness of the Indianapolis show February 2-7, afforded an opportunity for Mr. Bradshaw to get a large string of birds in prime condition and he entered 25 in competition. Out of these 24 were among the prize winners. Five out of six possible firsts were secured. The great cock bird Beau Brummel I, in addition to heading his first old pen, sired 12 of the prize winners! Among these was a pullet which we had an opportunity to examine and which many of the noted judges present say has established an unequalled record in a show of such numbers and class. She won first prize as pullet, and, in addition, won every special open to her in competition! This included best shaped female; best colored female; best headed female and best female in the entire Leghorn class.

Mr. Hering also had a cock bird sired by Beau Brummel I-that won first prize cock and three specials. This exhibit also won the award for the largest and best display of the varieties in the standard classification.

There has not been a better illustration in recent years of what a comparative newcomer in poultry raising can accomplish by application, interest and exercise of intelligence, than this winning shows. Mr. Hering bought his first pen of Leghorns about two years ago of a well-known breeder. The male had won first honors in New York. The next spring he introduced four new males in his flock, and since has had no new blood. As a result of careful mating and an observance of Mendelian laws he has produced birds that are unquestionably of a type to make old judges take notice. He has now in his breeding pens about 50 males and females that have won prizes at New York, Chicago and Indianapolis and it will behoove Leghorn breeders to pay close attention to the breeding and the conditioning of their birds at any show at which the Willows Farm exhibits.

Mr. Harmon Bradshaw, who is managing the plant is a Leghorn breeder of long experience and with his practical knowledge, and the whole-hearted interest and assistance given him by Mr. Hering, there is every likelihood that another big Leghorn plant will be developed here in the middle west that is worthy to be compared with the most famous Leghorn plants in the east.

Big Money Growing HELIANTI the new "wonder plant." Beats ginseng or anything else that grows. Thrives in any soil or climate. Write for full particulars. Burgess Seed Co., 3 A. J., Allegan, Mich.

F. A. MARSHALL

203 Bancroft Ave. - - Reading, Mass.

Sunny Jim.

You have heard of "Sunny Jim," the man who goes around scattering sunshine and brightness by just his pleasant smiling face. Well, Sunny Jim has a double, only his name isn't Jim; it is Gerald, and he hails from the town of Northfield, Ohio. We don't know the cause of Sunny Jim's pleasant smiling face, but we do know what makes Gerald that way.

You know his full name is Gerald Williams and when he isn't running around with that smiling face of his, he is managing the "Rocky Run Poultry Farm" and getting stoop shouldered from carrying away "blue ribbons" at the different shows. As we said before, we know how Gerald got hold of that smile that won't come off and we can't blame him a bit. A man who has won as many prizes the past season as he has, is fully entitled to walk around smiling and contented with the whole world.

At the Ohio State Meet, Cleveland, Ohio, the Rocky Run Farm's Buff Wyandottes won 1st, 3rd and 4th pullet; 1st, 3rd, 4th and 5th cockerel; 4th hen; 3rd and 5th cock; 1st, 2nd, 4th and 5th pen; both shape specials; color special and best display. This was a record of three times as many firsts as any other exhibitor. At this meet of Buff Wyandottes it is always the hottest contested and the hardest to win of any show in the country. The winning of pens means high quality and great skill in assembling. The Ohio State Championship Cup went with best display, and this called for the best class shown in Ohio. This makes two years in succession that these famous "Evergold Strain" Buff Wyandottes have won the Ohio State Championship.

You can begin to see why Gerald is called the double of Sunny Jim, but read on, there is more to come.

The greatest Buff Wyandotte show of the season, the one that carried the greatest honor, has the largest purse and best birds is the annual meet of the Buff Wyandotte Club. This event draws birds from all over Canada and the United States. This is caused by the fact that the best display carried away the National Championship Cup, awarded by the American Buff Wyandotte Club, for the greatest number of points won on the best cock, hen, cockerel, pullet and pen. At this event held in Rochester the "Evergolds" won 1st and 6th old pen, 4th young pen, 1st and 7th hen, 9th cock, 3rd and 5th cockerel, 3rd pullet, best shaped female, best display and grand championship Trophy Cup given by the club. This is the best prize that can be won and it makes the second time it has been captured by "Evergolds."

No, that is not all, here are a few Evergold wins at the Madison Square Garden: 1st pen, 1st cock, 1st and 4th hen, 4th cockerel, 4th pullet, special for best colored male, best colored female, best shaped male and best display. A record of three times as many "blues" as any other competitor. This 1st prize cock is a wonderful bird, so much so that the Rocky Run Farm has taken an actual photograph of him, made directly in the camera showing natural colors, untouched by hand; one of these new method pictures showing this wonderful bird "Star of the Season," goes with the Rocky Run Farm's elegant illustrated catalog, which also gives the correct method for feeding and breeding Buff Wyandottes. The price of this big book of knowledge is 20 cents, stamps or coin.

If Buff Wyandottes are on your mind, get Gerald's prices, he can supply you in stock or eggs—no order is too large or too small for his careful attention. Write for free circular and mating list. Address, Rocky Run Farms, Box 50, Northfield, Ohio.

RAISE EVERY CHICK on "HEN-E-TA-HEN-O-LA" The *Phosphatic*-System!

The more phosphorus in the egg and the more phosphorus in the egg-shell, the greater the fertility, the better the hatch and the hardier the new-born chick.

The Hen-e-ta-Hen-o-la System eliminates all bowel-trouble; reduces mortality to a minimum; grows and develops the chicks faster and cheaper into strong, rugged, healthy "egg-producing" birds.

Ask your dealer or write us for new booklet, entitled: *"The Successful Way to Grow Little Chicks."*

Still They Win.

If the time ever comes that you fail to hear of the famous "Fisheldottes" winning a blue ribbon at any show where they are exhibited, mark it down; there is but one reason, the show was "not issuing blue ribbons."

The late Cincinnati Show was the greatest ever staged in that city and when it came to awarding ribbons, those White Wyandottes of J. C. Fishel and Son, sure did sit up and take notice, winning first in everything.

Here is the complete list, look them over, 1st, 2nd, 3rd, 4th cock; 1st, 2nd, 4th hen; 1st, 2nd, 3rd, 4th cockerel; 1st, 2nd, 3rd, 5th pullet; 1st old pen, 1st, 2nd, 3rd, 4th young pen; sweepstakes for best cock bird in American class; sweepstakes for best pen Wyandotte class, besides several cups and specials. A great record won by some great birds. Look up their ad in this issue.

Partridge Plymouth Rock Club.

At the recent meeting of the Partridge Plymouth Rock Club of America, held in New York at the Madison Square Garden, the following officers were elected: President, C. M. Bird, Meyersdale, Pa.; Vice-President, W. F. Presgrave, Salisbury, Md.; Secretary-Treasurer, Paul Klingbeil, Walpole, Mass. Executive Board: C. M. Bird, W. F. Presgrave, Paul Klingbeil, Charles E. Bird, W. D. Campbell.

The next meeting will be held in Baltimore, Md.

Mr. Charles E. Bird, also a member of the Western Club, spoke about consolidating the Western and Eastern Clubs, every one present was very much in favor of it, and it was left to the Secretary to get in touch with all members to see what could be done regarding this matter. If you are interested write to the Secretary, Paul Klingbeil, Walpole, Mass.

Trouble at Tampa, Fla.

The following item was mailed to us by one of our subscribers. It was taken from the Tampa Daily Times:

"A warrant was yesterday sworn out for J. H. Wendler, secretary of the Florida Fanciers' Association, who left the city after the show without making an account of the funds collected for the gate at the show, nor of the money he had received as donations from business men.

W. T. Morgan, a member of the executive committee, and one of the first members of the Association, made the affidavit to the paper, charging Wendler with embezzling something like $3,000. The exact amount cannot be learned, as the secretary has the books in his possession."

Standard Electric Incubator Co.
76 Greenwich St. New York

"For All Poultry Raisers."

For many years there has been a need for a small hatcher of some kind that would answer the want of the large or small poultry raiser alike, and the W. F. Chamberlain Feed & Incubator Co. of St. Louis, Mo., seem to have solved the problem. They have placed on the market this season a very neat machine that is very attractive and is a successful hatcher as is shown by letters from persons that have used their machine. It is in the form of a setting hen, and is equipped with all the usual parts of large machines. Their advertisement in another part of this paper shows a cut of the incubator and further information regarding Chamberlain's Setting Hen will be sent to any one addressing them at 107-109 Olive St., St. Louis, Mo.

Elmer C. Hilborn.

Down in Royersford, Pa., is the home of some of the best Columbian Wyandotte breed; it is the farm of Elmer C. Hilborn, a gentleman who works morning, noon and night with but one goal in view, and that is perfecting Columbian Wyandottes.

At the late Philadelphia show Mr. Hilborn did not enter any hens, but he did enter cocks, cockerels and pullets, and when the ribbons were awarded he captured 2nd and 5th cockerel, 3rd cock and 3rd, 4th and 5th pullet. Mr. Hilborn has just issued a mating list, write him for a copy. Address Elmer C. Hilborn, Route 1, Royersford, Pa.

A Bargain Sale.

In this issue you will find a regular "bargain sale" offered by Charles H. Whitney, of Delta, Ohio. Mr. Whitney breeds S. C. White Leghorns exclusively and if you are interested in this type of fowl, be sure to read his ad. for the prices will surprise you.

Where the Money Comes From.

It is only comparatively recently that any attention has been paid to purely utility strains on this side of the water—although English breeders have been engaged in the attempt to produce heavy-laying proclivities by selective breeding for some 20 years past. Foremost among English utility breeders is Tom Barron, of Catworth, near Preston, who has achieved an international reputation by producing the 200 egg hen—not as an occasional freak, but as a dependable strain that can be relied upon to back up the 200 egg claim.

Perhaps the most notable pen that ever went out from the Tom Barron Farm was the entry in the 1913 International Egg-Laying Contest, illustrated above. This remarkable group of birds, ten in all, made the wonderful total of 2,073 eggs, seven hens laying over 200 eggs each—258, 246, 243, 226, 219, 219 and 208 eggs respectively. These totals do not include at least 150 soft shelled eggs, which would have made the average considerably higher. This pen is composed of birds that are full sisters of the winners of the Philadelphia North American contest, 1913, held at Storrs, Conn.; this latter pen also took the cup and the record of 1190 eggs (five hens) with an average of 238 eggs per hen.

The illustration shows but one of several prize-winning pens now in the possession of the Pennsylvania Poultry Farm, at Lancaster, Pa., an establishment now considered to rank among the foremost breeders of utility fowls in America. Although specializing in White Leghorns, of which breed the birds referred to above are splendid specimens, Messrs. Scheid & Ream, the proprietors, have also developed remarkable heavy-laying strains in White Wyandottes, Buff Orpingtons and S. C. R. I. Reds, having imported many pedigreed fowls from England with a view to offering the very best obtainable to American breeders.

GET READY FOR **THE GREATER BUFFALO SHOW** THANKSGIVING WEEK 1914 PREMIUMS PAID IN GOLD

Blue Andalusian Club of America.

After many months of incessant labor, the Andalusian Breeders of America find themselves backed by a real live Club to promote their interests and to advance those of this useful and beautiful fowl.

This Club is the result of a meeting held in connection with the Grand Central Palace Show, and another at the Coliseum in Chicago. At the last named show, a permanent organization was effected and plans made to make this one of the best specialty Clubs in the United States.

Mr. L. C. Taylor, of Gibsonburg, Ohio, was selected to act as temporary Chairman, and the new Club organized under his guidance. It was decided to offer Club ribbons at all shows where our members compete and silver trophies at National, State and District meetings of this Club.

Officers have been selected with great

SECOND PRIZE COCKEREL CHICAGO, 1912.
BRED AND OWNED BY
MRS. ALICE PAWSON, BIG ROCK, ILL.

care, they being breeders of long experience, as well as exhibitors. The following were selected to serve this Club until 1915: E. D. Bird, President, Greenwich Conn.; Theo. Hollister, Vice President, Duluth, Minn.; F. L. Garnett, Nottingham, Ohio, Second Vice President; H. L. Peck, Secretary-Treasurer, Champaign, Ill. Executive Committee: J. R. Huddleston, Los Angeles, Cal; V. H. Councill, Warrenton, Va.; Mrs. C. Tuthill, Waverly, N. Y.; Mrs. L. C. Boggs, Bloomington, Ind.; L. C. Taylor, Gibsonburg, O.; R. Treweek, Denver, Colo.; W. G. Kohl, Iowa City, Ia.; C. C. Stauffer, Telford, Pa.; J. E. Bliss, Clinto, Conn.

The new Club wants to be of assistance to you, and will appreciate your co-operation. Its officers answer letters promptly and will be glad to hear from anyone interested in Andalusians. Write the Secretary.

American Buff Leghorn Club.

At the annual meeting of this club, held in Chicago, the following officers were elected: President, F. A. Tecktonius, Racine, Wis.; eastern vice president, Josiah Fitzuth, Chester, N. H.; western vice president, Wm. J. Moore, Spokane, Wash.; northern vice president, W. H. Boyle, Jubilee, Vancouver, B. C.; southern vice president, H. W. Clark, Maryville, Tenn.; middle vice president, Frank S. Smith, Hamilton, Ohio; secretary and treasurer, Geo. S. Barnes, Battle Creek, Mich.; executive board, Len Lanius, Chris H. Leitner and A. G. Barlow.

Extra efforts will be put forth at the shows next season to interest more breeders to show, by offering silver sets, cups and ribbons. The club has just issued a valuable book of 80 pages telling all about the winter layers of large, white eggs that are unexcelled by any breed of fancy fowls, and the book is free for asking.

The Great Leghorn Farms

At the **Great Ontario, Guelph,** December, 1913, our winnings were: R. C. Browns—3d Cock, 1st and 2nd Hen, 1st Cockerel, 1st Pullet. S. C. Buffs—1st Cock, 1st Pullet, 3d and 4th Cockerel. S. C. Brown—1st Cock, 7th Cockerel. **At Buffalo,** December, 1913: S. C. Blacks—2nd Cock, 1st and 2nd Hen, 3d and 4th Cockerel, 5th Pullet. We have a fine lot of birds for sale—Cocks, Hens, Cockerels and Pullets. **Eggs for Hatching.** Send for circular.

Henderson & Billings - - St. Marys, Ontario

Here's the Breed for Flesh and Eggs

WE have devoted 10 years to specializing on S. C. Buff Orpingtons and scientifically line-breeding to develop a strain that not only wins the first prizes in the leading poultry shows but also excels in size, fine buff color and as heavy egg producers. Our cockerels make fine, juicy broilers and capons.

Sunswick Farm S. C. Buff Orpingtons

are ideal fowls for the *utility* poultry farm as well as for the poultryman who desires birds that will win for him in the hottest competition at the shows.

Our Record of Winnings at the Big Shows

Sunswick Buff Orpingtons have won the majority of first prizes on this breed at the leading shows each year since 1907. We have 1,000 choice yearling fowls now in stock which will make you fine exhibition or breeding birds.

Eggs for hatching and Day Old Chicks from our choice pens. Prices very reasonable—quality considered. Book your order early.

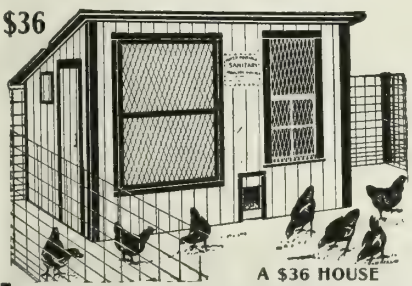
DON'T KILL or sell your laying hens

Use the **Potter System** and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The **Potter System** is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 50,000 satisfied poultry keepers, who are saving dollars every year. Our new 100-page Potter System book, **"Don't Kill the Laying Hen,"** contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers, and you will learn how you can use the Potter System on your flock, keep less hens, get more eggs and make more money using it. Write today, sending two red stamps to cover postage on our large catalog and circular telling all about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your ock, you will write us today.

DON'T BUILD



YOU can buy better, cheaper, more complete ready (factory) made hen-houses, roosting and nesting fixtures, coops, etc., from Potter & Co., because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

A. P. A. of California.

At the recent annual meeting of this Association, held at Fresno, the following officers were elected: L. C. Byce, Petaluma, President; C. G. Hinds, Oakland, First Vice President; R. J. Venn, Fresno, Second Vice President; H. W. Kruckleberg, Los Angeles, secretary; M. E. Dillingham, San Gabriel, Treasurer; Executive Committee: Charles R. Hacker, San Jose; W. S. Macy, Santa Barbara; Bur N. Woodhull, Stockton; L. N. Cobbledick, Oakland; Joseph E. Davis, Los Angeles.

A committee of three, W. H. Ingram, H. W. Kruckberg, S. O. Lindgren, were appointed to solicit funds for the 1915 convention of the American Poultry Association, which will probably be held in San Francisco.

Mr. Byce returned home on Saturday evening delighted with the convention. This is the fourth consecutive year that he has been elected President and he received a larger vote this time than ever before, showing that his good work is appreciated.

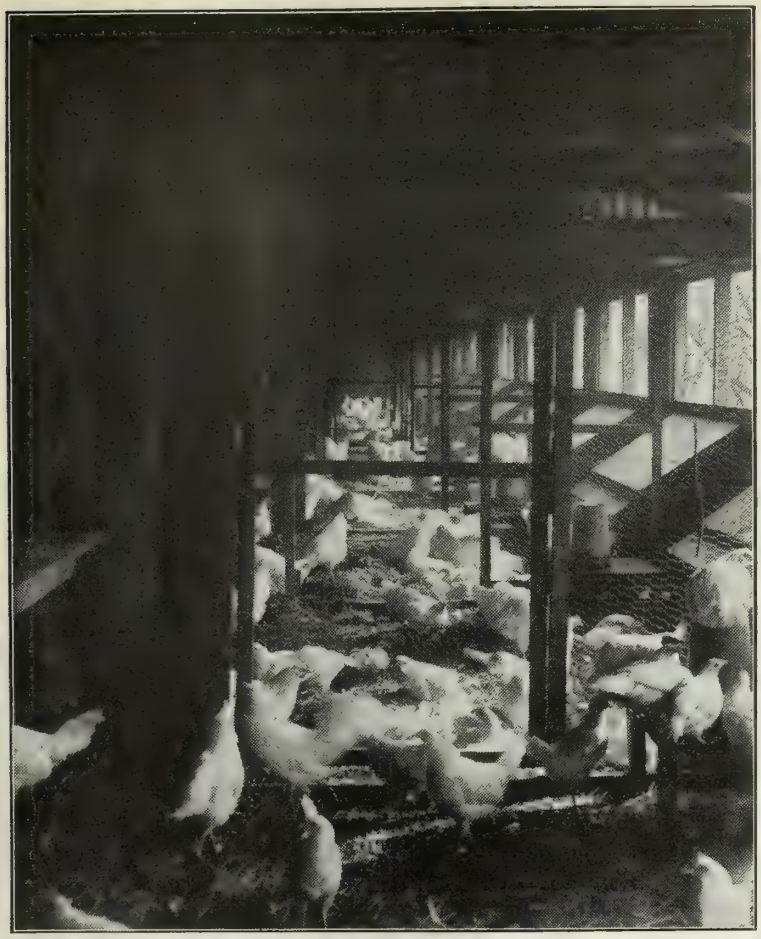
American S. C. White Minorca Club.

The 1914 year book of the American Single-Comb White Minorca Club is now ready for distribution. The Club is in a growing and prosperous condition, having more than doubled in membership,

SCHOOF'S PRIDE.

Heads yard No. 1, weight 11 lbs.; winner of four blues this season. Absolutely solid buff in every section. Owned by W. C. Schoof, Imlay City, Mich.

and S. C. White Minorcas are making big strides in gaining public favor.



More S. C. White Minorcas have been exhibited this past winter than ever before.

At the "Palace," Coliseum, Kansas City, Pittsburgh, Washington and many other big shows large classes were exhibited. Send for this catalogue and get better acquainted with this worthy fowl and those who breed them. Address C. R. Augustus Raschke, Secretary-Treasurer, Kingston, New York.

Barred Plymouth Rocks.

One of the most beautiful catalogs which we have seen in many a day is from the poultry plant of that well-known Barred Rock breeder, C. N. Myers, of Hanover, Pa.; the gentleman who has the "Lady Beautiful Strain." It is a twenty-five page book embossed, and printed in two colors. It is illustrated throughout and shows you just what kind of birds to expect when you buy from Mr. Myers.

Tells you all about his different pens, just who they are headed by and the records of his many winners. It tells you just why you should buy "Lady Beautiful Strain," giving their complete history. Printed on enamel paper, with drawings from the pen of the well-known poultry artist, L. A. Stahmer, it is a piece of work that Mr. Myers can justly be very proud of. If you ever intend to buy or raise Barred Plymouth Rocks you owe it to yourself to get a copy of this catalog. It is free for the asking. Address C. N. Myers, Box A, Hanover, Pa.

The Osbun Farm and Hatchery.

I recently had the pleasure of visiting the Osbun Poultry Farm and Hatchery, located just outside the city limits of Mansfield, Ohio. It is a farm of thirty-six acres, rolling, sandy land especially adapted to raising poultry. A beautiful shady range that is completely covered with colony houses allows them to house five thousand head. The Osbuns specialize in White Rocks, White Leghorns and Indian Runner ducks. They also can fill orders for Rose Comb Reds, White Orpingtons, S. C. Brown Leghorns, Barred Rocks, White Wyandottes and Light Brahmas. All their houses are of the open front type and roup and other diseases are unknown to this farm. Mr. E. I. Osbun is the farm manager, while Mark F. Osbun presides over the office and hatchery. This firm's aim is to give you more quality for your money than anyone else. They have published the most definite and helpful catalog that we have seen in some time. Write for it. Address the Osbun Poultry Farm and Hatchery Company, Mansfield, Ohio.—H. H. Coburn.

OLD HONESTY HEATER COMP'Y. Dept. A New Washington, Ohio

Spring Time.

When spring time comes one's thoughts go to green fields and chickens. If you live around the Central States and wish to make a short, pleasant trip, just visit the poultry plant of J. H. Lynch, located just outside of Opdyke, Ill.

It is upon this farm that the wonderful "Lynch Strain" of White Plymouth Rocks and White Indian Runner Ducks are bred. It has taken years of hard work to perfect these birds, but today Mr. Lynch is one of the heavy ribbon winners at Chicago, St. Louis, Springfield and smaller Central State shows. At the later Indianapolis show he entered two Indian Runners and captured second drake and second ducks. Mr. Lynch has several letters from last year's customers, telling of grand winnings they made this year with birds hatched from his eggs and baby chicks he sold them. On all egg orders Mr. Lynch guarantees safe arrival. He has some mighty fine stock and baby chicks. Write for his catalog. Address J. H. Lynch, R. F. D. No. 4, Opdyke, Ill.

The Secret of Fertile Eggs.

No incubator can produce good baby chicks unless the hens that lay the eggs are in the very best of physical condition.

Exercise all the time is one of the most important elements in producing not only numbers of eggs but fertile eggs.

WHITE WYANDOTTE.

This bird, with mate, won special for best cockerel and pullet at Guelph, Ont., 1913; also did much towards winning cup for display and collection at same show. Bred and owned by Sid Saunders, Ingersoll, Ont., Canada.

One of the most successful devices for compelling the feeding stock to take exercise is the 6 in 1 Exerciser-Feeder, manufactured by the Hover-Incubator Mfg. Co., Box 511, Browns Mills, N. J.

This is not only an exerciser, but it is a complete feeding device with six compartments. No other feeding device is necessary as it feeds shell, grit, dry mash, charcoal, beef scraps, etc., and at the same time scatters the grain in the food.

Even the man who has only a few fowls or eggs could afford to buy a 6 in 1 Exerciser because it increases the number of eggs the fowls will produce and requires his attention only once a week.

The 6 in 1 Exerciser-Feeder is for sale at all dealers.

Cleveland Poultry Breeders' Assn.

The following named officers were elected for 1914 at the recent meeting of the Cleveland, Ohio, Poultry Breeders' Association: President and Superintendent, J. O. Somers; first Vice-President, Dr. R. H. Sunkle and the well-known breeder of S. C. White Orpingtons, Dr. R. H. Lindhorst was elected as Secretary. For full details as to this Association, write to him at Cleveland, Ohio.

First Prize Blue Orpington Cock at Ohio State Show, Columbus, Ohio, January, 1914. Owned by Adolph Lehne, Mechanicsburg, Ohio.

Purified Kerosene.

It is a well known fact that ordinary kerosene still has impurities and all kerosene which has a yellowish tinge contains particles of sulphur. The Purified Petroleum Products Co., Chicago, Ill., has perfected a refining process which eliminates such impurities and its product is called "Purified Kerosene." This product has many advantages. The purifying process eliminates those things which cause noxious odors and for incubator purposes is unexcelled. Write them for booklet giving particulars.

Cornish Club.

The greatest exhibition of Cornish ever held was the recent meet at Warrentown, Va. There were 255 birds entered coming from nine different states. The following officers were elected for the year 1914: President, W. A. Tow, Catonsville, Md.; First Vice President, C. H. Smith, Warrentown, Va.; R. E. Glenn, Red Lion, Pa., Second Vice President; C. S. Brent, Oconomowoc, Wis., Third Vice President; with John W. Ward, Jr., of Pennington, N. J., as Secretary-Treasurer.

Every breeder of Cornish should join this Club on account of the great increase in popularity of the "world's best general purpose fowl." Life membership is $10.00. For further details write to the Secretary.

National Black Langshan Club.

Held their annual meeting in Rochester, N. Y., and the following officers were elected for the ensuing year: President, Geo. Urban, Jr., Buffalo, N. Y.; vice president, Wm. T. Blakely, So. Pasadena, Cal.; secretary and treasurer, John A. Rhodes, Cedar Rapids, Iowa; assistant secretary, E. R. McCormick, Letts, Iowa; executive board, R. A. Hewes, Crete, Ill.; L. E. Meyer, Bowling Green, Mo., and R. W. Bishop, Guilford, Conn.

This club is making arrangements to publish a Langshan book, therefore every breeder of this fowl should join the club and be listed in this book.

One dollar pays membership fee and dues to October, so send in your name and money to the secretary, John A. Rhodes, Cedar Rapids, Iowa.

First prize cockerel and first pen cockerel at the National Single Comb White Leghorn Club meet held at Elgin, Ill., 1914. Bred, owned and exhibited by W. L. Fern, Elgin, Ill.

The World's Best Wyandottes

Silver, Golden and Whites. They are simply wonderful in lacing, type and color. They have won for me at Madison Square Garden, N. Y. more than 300 premiums during the past 21 years. They win at all the large shows for our customers. We have 500 fine birds yet to spare at bargain prices, lots of males that are simply grand. Our matings were never as fine as this year and contain hundreds of winners. Eggs from our fine regular matings, $3 and $5 per setting. Try Keller's Wyandottes, you can't miss it, they have been bred for heavy egg production as well as exhibition, for the past 30 years. Also the finest narrow laced golden sebright bantams. Large, finely illustrated circular and mating list free.

IRA C. KELLER Brookside Farms Box 75, Prospect, O.

A New Mammoth Incubator.

When we think of the years of study spent upon poultry raising, it seems almost improbable that anything new might be originated. Yet we find the catalogue of the Schwalge System explains some new ideas about incubation and the mammoth machine described therein promises to be a great factor in incubation methods of the future.

Send for the catalogue. It's free. Address Schwalge Bros. and Smith, box 100, Elmhurst, Ill.

"The Quisenberry Way."

Every one who is "chicken-wise" knows of the splendid work which T. E. Quisenberry is doing at the Missouri Poultry Experiment Station. Comparatively few, as yet, know of the great work which he has inaugurated as president of the American School of Poultry Husbandry. This school, through its correspondence course, offers everyone who desires to succeed in the poultry business, the opportunity to secure, direct from Mr. Quisenberry, the results of a lifetime of experience, study and investigation. Look up the advertisement of the American School of Poultry Husbandry, Mountain Grove, Mo., elsewhere in this issue, and write for illustrated prospectus. Kindly mention this paper.

A. P. A. Gold Medal.

A prize much coveted is the A. P. A. gold medal, which is awarded at State shows. At the recent Connecticut State show, the medal for champion cockerel, all varieties, was awarded to a bird, bred, raised and exhibited by the Joe-Pye Orpington Farm, of South Norwalk, Conn.

He also won the A. P. A. silver medal for best in English class. This bird is a son of "Titrain," the wonderful Buff Orpington cock that so successfully defended "the blue" at the late New York Garden show. He is also a grandson of the great "Champion New Yorker."

All steel, nickel plated, punches clean. Hole is right size; will not bruise the foot. Price 25c by mail, or at your dealer. J. O. Pettey, State St., Belvidere, Ill.

The Improved Champion Leg Band

Aluminum only; two sizes; adjustable to fit any fowl. Held by double lock, can't lose off. Postpaid 12-15c; 25-20c; 50-35c; 100-60c. Initials 10c per 100 extra. 50 or less, 5c. Also Pigeon Bands.

T. CADWALLADER, Box 1402 Salem, Ohio

DON'T DODGE PLAIN FACTS

"Dead in the shell" chicks cost you from $5.00 to $15.00 every time you set your Incubator, depending on the size.

"Dead in the shell" chicks are the result of Carbon Dioxide poisoning.

The ONE and ONLY thing known to Science that will overcome this Carbon Dioxide poison, is—OXYGEN.

"Lack of Oxygen kills more Incubator chicks in the shell than any other cause. UNLESS Oxygen is SUPPLIED the chicks will DIE."—Professor C. F. Townsend, of Weedsport, N. Y.

BY "SUPPLYING OXYGEN" TO THE EGG CHAMBER OF THE INCUBATOR THE

Ajax Improved Oxygen Vitalizer

puts an end to the "dead in the shell" chicks, and makes them immune from White Diarrhoea when properly brooded. It costs $4.00 complete, ready to use, delivered, charges paid in the U. S., lasts a life time, can be attached to any Incubator in five minutes, and MORE than pays for itself EVERY TIME used. We have published a booklet, that is full of VERY VALUABLE information. It is the "last word" on Artificial Incubation and tells you all about Oxygen and its uses. IT'S FREE. Please do NOT ask for it UNLESS you own or operate an Incubator.

PLEASE BEAR IN MIND

There is only ONE—AJAX—"IMPROVED" Oxygen Vitalizer, and that the "AJAX" is the ONLY one that is GUARANTEED. It is sold under an OFFICIALLY SIGNED Guarantee, packed with the Vitalizer when it leaves the factory, that says—"YOUR MONEY BACK IF IT FAILS." You LOSE, and will CONTINUE to lose Money every hatch that you take off without it. Write NOW. Be ready for your FIRST hatch. If you think there are any "mysterious spots" in OUR Guarantee, just write one for yourself. Send it along with your remittance, and we will sign and return with your Vitalizer.

Reliable Poultry Specialty Co.

Main Street -:- Alexander, New York, U. S. A.

White Langshan Club.

Mr. Breeder, do you know what you are losing by not belonging to the "Worlds National White Langshan Club?" Possibly you do not know such a Club exists. In that case you probably have wondered why our breed is gaining in popularity so fast. There are two reasons. First, because the breed is right there with the quality to make good. Next, because there is an organization known as the "Worlds National White Langshan Club," consisting of the country's most prominent breeders who are boosting with all their might. Our influence is being felt all over the country. Our benefits are numbered by the score and our aim for 1914

BLUE ORPINGTONS.

First cockerel National Fanciers show, Indianapolis, Ind., 1914. Bred and owned by H. N. Hanchett, Jackson, Mich.

is double what we have accomplished in 1913. Mr. Breeder, look us up. You need the benefits we offer you. Our fees are but one dollar per year, after the one dollar original membership dues have been paid. Can you afford to get along without the Club for this small fee? Think it over. Ask for a membership at once. Send two dollars at once to A. D. Freese, Secretary Mohawk Village, Ohio.

—o—

Illinois State Show.

At the late state show of Illinois, held in Springfield, the Buff Orpington class was so hot that but one breeder won more than one first.

A. B. Porter, of La Salle, Ill., an exclusive Buff Orpington man, won first champion male and first young pen. The latter award was won in a class of thirteen.

A flock of Pekin Ducks on the C. C. Shoemaker Poultry Farm, Freeport, Ill. Hundreds of Pekin and Indian Runner Ducks, Bronze Turkeys, Toulouse and Embden Geese are produced annually on this farm.

The Indianapolis Show.

The 14th annual meeting of the Fanciers' Association of Indiana was held in Tomlinson's Hall, Indianapolis, Feb. 2-7. At no time past has there been as many entries or as high quality as was shown at this year's meeting.

The pigeon coops were arranged around the walls of the building, forming a very attractive background for the other fowls. The dog exhibit was on a floor above the poultry.

With over two thousand entries and attendance very heavy, it was a success in every way. E. R. Milhous and his able assistants handled things to the entire satisfaction of everyone, ribbons and prizes being paid promptly. The following judges officiated: Scranton, Schwab, Pierce, Zike, McClave, Richardson and Swain.

A great deal of attention was directed toward the display of Buschmann-Pierce's Single and Rose Comb Reds. U. R. Fishel, Jr., showing White Cochin Bantams, won first, and second cock, first and third hen, first, second and third cockerel, first, second and third pullet and first pen. Henry F. Alberding, of North Judson, Indiana, won first cock the first pullet on S. S. Hamburgs and in a hot class of S. C. Buff Orpingtons, fifth cock.

Indianapolis always has a good meet, so don't overlook them when arranging your show dates for the coming season. —H. H. Coburn.

Toledo Show.

The Tri-State Poultry and Pet Stock Show was held in the Terminal Building at Toledo, Ohio. It was the greatest show the association has ever held. It was a large, roomy building with plenty of light and everything ran along very smooth, coops were single decked, showing the birds up very fine.

There were close to 2,000 entries and the quality was excellent all down the line. Next year's show will be held in the same building, so don't forget to include Toledo on your show list.—H. H. Coburn.

Union City Assn.

At the regular annual meeting of the Union City, Pa., Association, Dec. 28, 1914, to Jan. 1st, 1915, was selected as the next show date. Plans have been laid to make this larger and better than ever, and as they always have had a good show, they must be figuring on stepping lively. For complete details write to the Secretary, J. Gay Struthers, Union City, Pa.

HIGHEST GRADE INCUBATOR OIL — "MAX-I-MUS" PURIFIED KEROSENE

No Carbon! No Smoke! No Odor!

PURIFIED TRADE MAX-I-MUS MARK KEROSENE

Absolutely the purest, water-white burning oil on the market, free from all impurities and moisture. A double-refined, purified and filtered product. It produces a beautiful white light and, being free from all mineral greases, dirt and foreign substances, it burns with a steady flame. It leaves no dirty, greasy burners, nor smoky chimneys and sooty accumulations. The wicks do not carbonize and crust as with ordinary kerosene. It is a revelation to incubator operators. It greatly lessens the labor of trimming and caring for lamps. One need not worry about lamps smoking up, choking with soot and carbon, and going out. It does not require the constant attention that common kerosene does in incubator lamps.

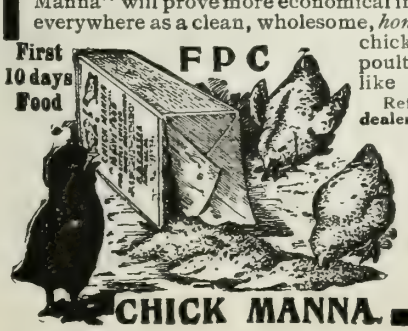
Special Introductory Offer

To introduce our "MAX-I-MUS" purified kerosene among poultrymen, we will ship direct from our Chicago plant during March at the follow prices F. O. B. Chicago:

30 gallons, in wood barrel, shipping weight 260 lbs.,	$4.50
50 gallons, in wood barrel, shipping weight 415 lbs.,	$6.75
50 gallons, in steel barrel with brass faucet, shipping weight 380 lbs.	$8.75

All orders will be shipped promptly same day as received. Write for booklet telling of our patented purifying process. Address, **Purified Petroleum Products Co., 914 Tacoma Bldg., Chicago, Illinois**

How to Save Your Little Chicks



Many chicks, young turkeys, pheasants, etc., die during the first 10 days after hatching. Their delicate digestive organs require a specially prepared and properly balanced food to prevent the fatal attacks of bowel trouble during this critical period. Feed your baby chicks the **Original**, specially prepared, **complete** food—

"F. P. C. Chick Manna"

Watch them thrive and grow into husky, healthy youngsters with sound, vigorous constitutions to build further development. It is unlike any other baby chick food on the market. *Introduced in 1884.* It is

The Original Chick Food—Brings 'Em Thru First 10 Days

"F. P. C. Chick Manna" regulates and strengthens the delicate digestive organs, promotes growth and helps ward off attacks of epidemics. Cracked corn and heavy grain feeds are too hearty for baby chicks. "F. P. C. Chick Manna" will prove more economical in the end. Recognized by poultrymen everywhere as a clean, wholesome, *honest* food with unusual merits for baby chicks. Michael K. Boyer, the well-known poultry authority, says, "Chicks not only like it but thrive wonderfully on it."

Refuse substitutes and imitations. **Ask your dealer for it.** If he cannot supply you, write for our

Special Introductory Parcel Post Offer

To introduce "F. P. C. Chick Manna" into your vicinity we are making a special offer of a 1 lb., 5 lb. or 15 lb. package by Parcel Post. Write today for **free** circulars of "F. P. C." Foods and Supplies.

Red Feather Farm Reds

Rose and Single Combs

Again Our Great "SENSATION" STRAIN Wins in Hottest Competition

AT MADISON SQUARE GARDEN
December 26-31, 1913

Nearly 400 REDS shown—the GREATEST QUALITY CLASS in the history of the breed—we won on Rose Combs, 1st COCKEREL AND COLOR SPECIAL, 4th COCKEREL, 2nd PULLET.

AT BOSTON
January 13-17, 1914

With America's leading breeders competing on Rose Combs, we won 1st COCK, AND SHAPE SPECIAL, 1st HEN AND COLOR SPECIAL, 3rd HEN AND 2nd PEN.

These winnings were made with other birds after our annual clean sweep at Providence, where we won **27 regular and special prizes on 13 entries including EVERY FIRST PRIZE (5), EVERY SHAPE, EVERY COLOR and EVERY GOLD SPECIAL and STATE CUP for sixth successive year,** and were also awarded **PROVIDENCE JOURNAL CUP (value $100) for the BEST SIX RHODE ISLAND REDS IN THE SHOW—to be won three times.**

Hundreds of Cockerels and Pullets That Will Breed Winners For You

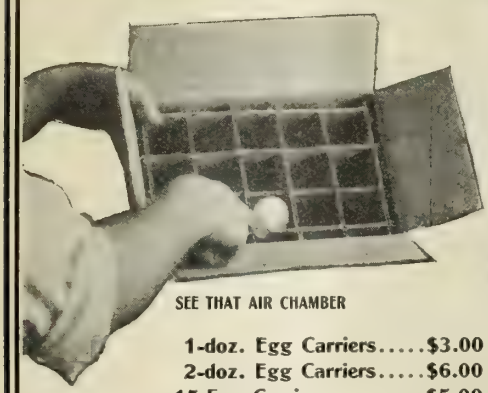
RED FEATHER FARM, F. W. C. Almy, Prop. and Mgr., Box 100, Tiverton 4 Corners, R. I.

The Best S. C. White Leghorns In America

Will, we honestly believe, be hatched from our matings this season. If you could see the marvelous quality in all our pens, you would say so too.

We entered in 23 classes in four shows this season and won first in 20 classes and second in the other three. **We have won more firsts, specials and other awards in the past four years at the Grand Central Palace, New York, Boston, Hagerstown and Philadelphia, THAN ALL OUR COMPETITORS COMBINED.** At the last Palace, New York, show, in what everyone conceded to be the strongest and best class of Leghorns ever exhibited in this country (don't take our word for this—look up the comments in any poultry paper), we won the display prize by over **1,000 points more than our nearest competitor, besides Best Pullet and display in the whole show.** Our stock has not only won for us; it has won for our customers in most every part of this country and Canada. IT WILL WIN FOR YOU.



Buy your stock and hatching eggs from the breeder that produces the goods. "Actions speak better than words."

We supply hatching eggs from the same pens as we hatch our winners from, at the following prices: 60c per egg from the first 10 pens, every one headed by a champion male; 35c per egg from pens 11 to 20, each headed by a prize winner; 20c per egg, or $15 per hundred, from other good pens, all headed by cracker-jack males. Send for catalog and mating list, and mention A. P. J.

Dune-Alpin Poultry Farm Geo. J. Kerr, Manager Box 561-J East Hampton, New York

Well, Mr. Poultryman, Here at Last Is What you Have Been Looking for,

The Andrews Safety Egg Carrier

SEE THAT AIR CHAMBER

We have at last perfected a

PERFECT EGG CARRIER

which is suitable for carrying the finest eggs to destination in perfect condition. Its price is such that it can be profitably used for commercial purposes. It is the ideal parcel post carrier. **We have letters from a number of America's foremost fanciers stating it is perfect. These illustrations tell the story.**

THIS SEAL IS YOUR PROTECTION

1-doz. Egg Carriers.....$3.00 per 100
2-doz. Egg Carriers.....$6.00 per 100
15-Egg Carriers .....$5.00 per 100
30-Egg Carriers..... $9.00 per 100
100-Egg Carriers.....$16.00 per 100
(Shipping Labels and Tape Furnished Free)

$8.50 Buys 150 Egg INCUBATOR And 150 Egg BROODER

Fortunate deals in buying raw materials, our modern factory methods and our direct-to-you plan enable us to cut the price to a fraction. It's the most remarkably low price we have ever been able to make ourselves or have ever heard of elsewhere. The machine has the best regulator; dependable thermometer; strong, well-built egg-trays; all metal safety lamp with bowl stamped out of sheet steel; best lamp bracket; steel legs; best egg-tester. Write for this wonderful proposition on

The ROCKFORD INCUBATOR & BROODER

Incubator alone $6. Metal Brooder $3. Both Incubator & Brooder $8.50

You could not ask for better quality—to pay more is needless

It is heated with warm, pure air. Foul or impure air is carried off. No chance for lamp fumes to enter egg chamber. All parts are heated evenly. Side walls and top are made of 1-inch lumber and lined with heavy deadening felt, and again lined with half-inch lumber inside. Heat cannot get out—cold cannot get in—fuel is saved. The Brooder is water heated—fire-proof and weather-proof—easily handled.

Order Today on Approval—Guarantee Protects You

Don't let anything keep you from this remarkable proposition. The quality is so good—the guarantee so strong and the price too low to let anybody miss it. We guarantee the incubator to satisfy you in hatches and also guarantee the metal brooder to raise chicks to satisfy you or we return your money. Send us your order today or write us for further information.

Why Don't You?

Poultry raisers! Get in on this offer quickly. In all of our 26 years' experience we have never been able to make so astonishing an offer as this. Don't miss it. Here, we give you everything you could want in a reliable hatcher, at a low price that has heretofore been impossible. Bear in mind that this incubator is fully guaranteed—shipped ready to use—no extras to buy. We charge only for actual cost of material and labor with one small profit, and depend on enormous production.

$6.00 For This 150 Egg Incubator

Money Back Guaranty

It comes to you all set up (not in knock-down form) Just fasten legs and lamp bracket and start the hatch.

$3 For This 150-Chick BROODER

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

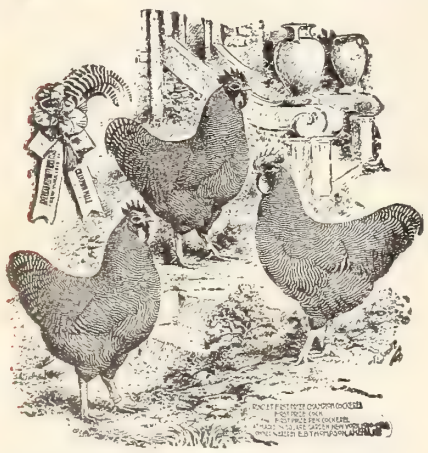
Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.

The Imperial prize of the show, Sweepstakes Special for Champion Male.



Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Scuare Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. See my ad. on page 294 for my remarkable record of one year ago at New York. These great twin records, two years in succession, spell **Imperial "Ringlet" Supremacy.**

Sheppard's Anconas For Profit!

Poultrymen are of one opinion when it comes to the question of Poultry Profits. Almost without exception they will tell you **"the profit is in the eggs!"**

—and SHEPPARD'S famous "ANCONAS" have challenged the world for egg production.

G. W. Idle writes, "Pullets hatched from eggs purchased from you have laid an average of **256 eggs each** for entire flock for year."

"Going some"—but ANCONAS have the wonderful trapnested record of 270.

Don't that sound like **profits** to you?

They are beautiful fowls from a fancier's standpoint, and as a utility fowl the "ANCONAS" cannot be equalled.

You are in the Poultry business for all the **profit** there is in it, and no matter how you look at it, the "ANCONAS" lead.

They are hardy, prolific, not inclined to set, are the **greatest layers the world has known,** and they always present a clean, well groomed appearance.

Don't you think it would be a good idea to raise the most profitable fowls on the market?

ANCONA Pullets lay as early as $4\frac{1}{2}$ months—they lay large white eggs—they require **less food, less floor space,** and are busy laying, when the heavy fowl is setting.

Wouldn't it be a good idea to have complete information on this profit making strain? Tear out the corner and mail it quick for your copy of my catalog and mating list.

H. Cecil Sheppard, Berea, Ohio.

I would like complete information on Sheppard's famous "ANCONAS" —the "World's Best."

Very truly,

1st Old Chicago Pen 1913-14, Bred and Owned by F. E. Harrison, Menominee, Mich.

F. E. HARRISON'S ARISTOCRATIC ROYAL RED S. C. R. I. REDS

Are the acknowledged champions by virtue of a show record unequalled by any competitor.

In the last two Chicago Coliseum Shows, 1912-13 and 1913-14 (note the dates), Royal Reds won nine out of a possible twelve firsts , competing with seventy-four competitors, none of which won more than one first.

In addition to this, in these two great shows, Royal Reds won five seconds, four thirds, three fourths, and two fifths, and three times as many color specials, shape specials and championships as all other competitors combined, and best display at both shows. Think this over.

Catalogue free for the asking.

F. E. HARRISON, Box 30, Menominee, Mich.

GOLDEN SILVER CAMPINES FAVEROLLES WHITE BUFF

The question how to get many eggs in winter now solved. Get White and Buff Faverolles. We doubt if ever there were better zero winter layers produced than are White and Buff Faverolles. And if there are better quality table fowls on earth we have never found them. Our Campine matings this season are of high class order. **Eggs, $5.00 per 15; $30.00 for 100; except Buff Faverolles, $1.00 an egg. Stock for sale at right prices.**

FIRST ANCONA PULLET-CHICAGO, 1912
BRED BY
DR GUY BLENCOE, ALMA CENTER WISC

Blencoe's Anconas

Have Won From Boston to Seattle

Won 1st Pen at Chicago this December, 1st Cockerel, 1st, 2nd, 3rd and 4th Pullet, 1st and 3rd Hen at Madison, 1914. Get your stock and book your eggs now.

MRS. GUY BLENCOE, Alma Center, Wis.

World's Foremost White Wyandottes

REMEMBER—My White Wyandottes have been the most prominent winners in the leading shows for over 15 YEARS and many owe their success to my strain, while I have won many first and second prizes, cups and specials at New York, World's Fair and other shows, past year won the $25.00 cash special for best display, offered by the Massachusetts State Board of Agriculture.

One of my patrons has been a most noted winner at **Chicago** for three years, another the past three years won the lion's share at **Indianapolis** and **Pittsburg, Pa.**; another won more last year than all others and again this year made a big win against several noted breeders at **Dallas, Tex.**; one won three firsts and several other prizes at **Toronto, Ont.**, with birds bought from me; another won the $100 Challenge cup for best display, and at **Ottawa, Ont.**, my birds have been the most prominent winners many times. One patron writes, cockerel I sold **won 1st at Youngstown, Ohio, also A. P. A. medal for best male in show**, and did the same as cock; another writes, "the cockerel you sold me won 1st as cock at **Minnesota State Fair** and 1st cock at **Minneapolis** show." At **Detroit** my patrons have been the most prominent winners and at recent show winning more than all others combined. At **Baltimore, Washington, D. C.**, and many other shows my strain have been the prominent winners. Now, I have letters on file to prove these claims, and my circular will give names and dates in full. Send for it, **free.**

I will sell Eggs from a limited number of special matings at $5.00 per setting, 50 Eggs $15.00. All stock purchased can be returned at my expense if not satisfactory, conditions under which I have sold all my stock, and have shipped to all parts of the world.

J. H. JACKSON Lock Box 88 Hudson, Mass.

P. S. Farm raised, in open front coops; bred with an eye for vigor and great laying as well as Standard points.

WHITE WYANDOTTES

Again we win at Philadelphia, December, 1913, 1st and 5th prize Pens, 2nd prize Cockerel and 5th Hen and Silver Cup for best display. We were showing against 29 exhibitors. At Philadelphia, December, 1912, we won 1st prize Cockerel and 3rd Pen.

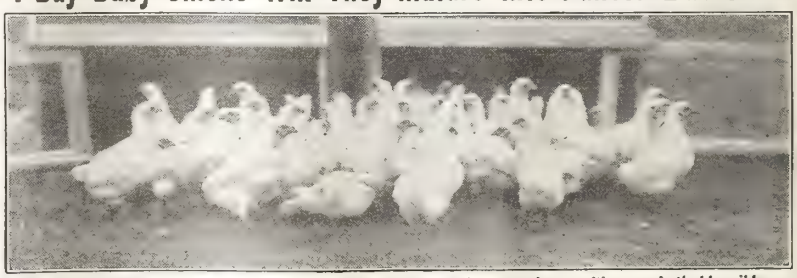
SEND FOR FREE CATALOGUE. Our birds are big winter layers. Eggs from Philadelphia winners, $5.00 per 15; $8.00 per 30; $10.00 per 45. Other prize pens, $3.00 per 15; $5.00 per 30. Utility, $2.00 per 15; $8.00 per 100. Baby Chicks, $8.00 per 50; $15.00 per 100

CARR BROS., Celtic Poultry Farm, Box R, VINELAND, NEW JERSEY

Hillswood S. C. Reds Win at both N. Y. Shows, Dec. 1913

First prize cockerel, shape special and championship of the whole class at Palace, New York, Show, and third prize cockerel at Madison Square Garden in competition with the world's best, and I am the only exhibitor to receive ribbons in the cockerel class at both of these shows.

THESE WINNINGS HAVE A "STING OF QUALITY" TO THEM



Write me your wants. I have mated a few very select pens for the egg trade that should turn out quality chicks.

My Rose Comb Reds have also produced winners.

Eggs from exhibition matings, **$15 for 15.** Choice matings, **$5 for 15.**

ERNST UNDERHILL - MORRIS PLAINS, N. J.

If I Buy Baby Chicks Will They Mature Into Pullets Like These?

Will they grow into birds that I can feel proud of and that will lay Winter eggs in quantities, or win the blue ribbons for me, or will they be just scrubs, that's the question before everyone who buys day-old chicks. It is not the firs price that counts—but will they be right at maturity ?

Caldwell's White Plymouth Rock (Fishel Strain) "Baby Chicks of Quality"

From Utility Matings

Will mature into long backed, well made birds, pure white in color, that will be the secret of "Winter eggs." Every utility breeder is descended from known good layers that have been bred that way.

From Exhibition Matings

Will mature into blue ribbon winners. Every exhibition pen is made up of birds with good combs, of good type and chalk white in color, possessing the rich blood lines of generations of Fishel blue ribbon winners. Our birds were among the principal winners at the Indiana Fanciers' Show, Indianapolis, 1912.

Our Flocks are Vigorous

All Fall our flocks have roamed meadows and woods accumulating health and vigor. They are now in Winter quarters so full of life and vitality that their chicks will be strong and sturdy.

Here is the Caldwell Selling Plan

We are now booking orders for "Baby Chicks of Quality" for Spring delivery. We never have been in such fine shape to handle orders of any size. Our fine plant is fully stocked with the finest birds we ever owned of both utility and exhibition quality. An early placed order enables us to so arrange our hatchings that we save money. By your faith you are entitled to that saving so we will allow you discounts for early placed orders, the earlier the greater the discount. **Safe arrival of chicks is guaranteed.**

A New Catalog Is Now Ready

One of the finest ever issued by any breeder. It tells just how "Baby Chicks of Quality" are produced and describes every grade of stock that we have to sell with prices. A copy is ready for you.

Two Headliners in the Poultry World

Tecktonius-Reed Strains

R. C. S. C. BUFF LEGHORNS S. C. RHODE ISLAND REDS

Now Under Same Management

The fame of "Tecktonius" Buffs—America's Champion exhibition and laying fowl—is world wide. Big exhibition prizes, everywhere, at their mercy—not once, but for 7 consecutive years. Their laying record, as well, is as long and brilliant, with 249½ average in 1912 Nat'l Laying Contest—one bird, 281 high. "Tecktonius" Buffs build "winning" reputations, and make "big money" for poultrymen. Put your trust in them and be a "winner" as a poultryman.

Take note of **Reed's S. C. R. I. Reds**—the coming champions of 'Reddom'. This **unrivaled strain of Reds** is the outcome of 7 years efforts of B. C. Reed—one of the most—if not the most—scientific and successful breeding and mating expert this country has ever known. Mr. Tecktonius, recognizing Mr. Reed's extraordinary breeding ability, and the almost perfect strain of Reds he has evolved, has enlisted Mr. Reed's co-operation, and henceforth, these 2 breeding geniuses will work hand in hand for the advancement of these two grand strains.

Some Unrivaled Tecktonius Strain Bargains

S. C. Matings--Pens 1 to 6 inclusive, one 15-egg setting, $10; two, $18, three, $25.
Random Selection--If selected from one pen, in which price rules, $5 per setting, extra. Pens 7 to 10 inclusive, one setting, $5; two, $9; four, $15. Pens 11 to 14, inclusive, $2 per setting; $10 for one hundred.
R. C. Matings--Pens 15 and 16, one setting, $15; two, $25.
S. C. Utility Stock--Hens, $2; Cockerels, $3 and $5; trios and pens, $10 and $15.
Exhibition Stock--Hens, $5; Cockerels, $15 and $25; trios and pens, $25 to $50.

No Chicks of Either Variety For Sale. Mating List Free.

Special Introductory Offer—Reed's Strain S. C. R. I. Reds

We have mated 6 pens of these Royal Bred birds--the cream of 565--comprising 2 Cocks, 4 Cockerels, 20 Hens and 40 Pullets. Everyone is a marvel of breeding, with exquisite, rich even Red Color, and with absolutely no contrast between hackle, back and sickle feathers. The tail and wing markings are as near perfection, as scientific breeding can make them. Both male and female types come up to standard requirements, and well over standard in breeding weight. From all pens above described, we will sell eggs as follows: One 15 egg setting, $5; two, $9; four, $15; per one hundred, $25.

No Stock For Sale Until Fall. No Chicks For Sale.

LAYING HENS LIKE THESE

ARE PRODUCED BY USING
HINE'S MEAT SCRAPS
AND POULTRY BONE

No successful poultry breeder can eliminate meat in some form from his chicken food. The meat scraps made by us is a highly concentrated protein food. It satisfies the natural craving of fowls for flesh food, insuring health, thrift and vigor—which means "laying hens." This meat scrap contains the necessary ingredients for building up "money-making fowls." Hine's Meat Scraps are endorsed by experiment stations and the world's largest poultry breeders. No matter if you own one or ten thousand chickens you need meat scraps. Just write us and we will send prices and a sample.

Sold on its merits.
If not satisfactory money refunded.

Hatched at 6° Below Zero

452 Chicks out of 469 Fertile Eggs
Set Feb. 1st in a Candee.

CRYSTAL WHITE POULTRY YARDS.
Shavertown, Pa., Feb. 26, 1914.

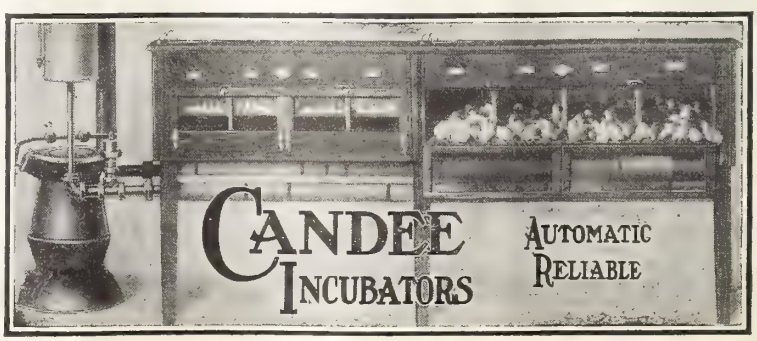
Gentlemen—Thought perhaps you might be interested to know of my success with the machine.

On February 1st I put 525 eggs in the machine, and in five days tested out 56 infertile eggs, leaving 469 fertile eggs to hatch. On the 21st of February I took out 452 of the finest chicks you ever saw, leaving 17 eggs that did not hatch. I consider this remarkable, in view of the fact that it was the first of the season, when fertility, etc., do not run the best.

My machine is full now, and eggs hatching from time to time. Yesterday another hatch came off, and out of 134 eggs, two compartments, I got 127 chicks for my customer. Another such hatch as my first one, and my incubator will be paid for, because I sold the chicks for 20 cents each and realized $90 on the sale.

The machine is running fine, no trouble, no bother for my wife, because she never looks at it, and when I look at it morning and evening it is just as I leave it each time. Keep coal on the fire, and that is all.

Last week, when the thermometer registered 20 degrees below here, I had 6 windows open in my cellar and **it was 6 degrees below right in front of the incubator,** but the thermometers registered 103 on the inside, so I had no fear, nor did I care how cold it was on the outside.



JOHN S. LLOYD.

From all parts of the country, Candee operators are writing of their splendid hatches. It is already evident that the fine work of last year will be eclipsed.

The Candee hatched chicks are proving their superiority—stronger and healthier. They stand shipping better. They grow faster and they lay earlier.

If you would know more about Candee incubators and brooding systems, write for our big free 108-page catalogue.

Don't Starve Those Chicks

and Don't Overfeed Them

ONE EXTREME IS AS BAD AS THE OTHER

The greatest of all "chick problems" is trying to feed the little ones correctly. Your season's success depends upon rearing them into big, strong, healthy birds—the kind that can go forth and command a good price for you. There is but "one and only one" solution to this feeding problem—and that's to use a

Simplicity Kant-Klog Baby Chick Feeder

This feeder will feed your chicks just as they need it—automatically, without thought or trouble on your part. It will make them grow and develop quickly, turning them into strong, healthy birds. A little chick's crop does not hold very much and is soon empty. You can not be there all the time to feed them, yet they must eat often and this feeder solves the problem. With this feeder no grain is left lying around to become filthy and foul and then eaten, causing gases, bowel trouble and other sickness. In plain words it is simply perfect and perfectly simple. Holds about a quart of feed, stands on three wire legs and it is guaranteed.

ORDER DIRECT FROM THIS AD You run no risk whatever—if you are not satisfied your money is refunded. **The price delivered to your door is $1.25**

SIMPLEX SUPPLY HOUSE, PONTIAX BLDG., CHICAGO, ILL.

American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralize the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.

The American Standard of Perfection

The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, $2; leather binding, $2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

On its shoulders rest this gigantic Billion-Dollar Industry.

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association. We urge you to write immediately for information and application blank. Address

E. B. THOMPSON, President, Amenia, New York
S. T. CAMPBELL, Secretary

American Poultry Association, Mansfield, Ohio

If it's Campines you want, we have them. There is nothing better anywhere. Send in your name on a postal for mating list. It is now ready and gives a description of the best Campines in America.

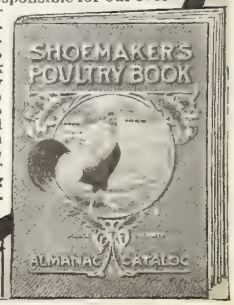
MANHATTAN FARMS, GEO. E. NOETH, Owner
BRIGHTON, N. Y.

Poultrymen have confidence in the Globe Incubator because all the value—all the invested money—is put into the machine itself. Send 15c for our valuable descriptive book.

It Is Well Worth While to Consider "the Man Behind"

Before placing your order for an incubator or brooder, it will pay you to get acquainted with the manufacturer. Make sure that you can place your entire confidence in him and his machines. There are too many "dry goods boxes" with cheap tin heating arrangements sold now days for incubators and they are made by people who know very little about the chicken business, artificial incubation and its requirements. They are sold exclusively by "Hurrah advertising" and the manufacturer doesn't care if he ever hears from the customer again.

The Globe Incubators and Brooders



are the best machines on the market and we can prove it.

The most modern machinery and the most skillful workmen that can be found enter into the construction of the Globe Incubator and Brooder, and no machines leave the factory until they pass the most rigid examination, and the great hatches which our customers obtain are the results of our twenty-five years of experience in breeding thoroughbred poultry and making incubators and brooders.

We sell more thoroughbred chickens than any two of the leading advertisers in this country

In order to raise this great number of fowls which we annually sell, it became necessary for us to invent our own machine, one that would do the work and could be relied upon for we had tried all the leading machines manufactured before inventing the Globe Incubator and Brooder. The remarkable improvements which we are adding each year make the Globe the best artificial hatcher on the market today.

WE HAVE SOLD THOUSANDS OF THEM. Such satisfactory results have been obtained from our machines that we have thousands of unsolicited testimonial letters on file open for your inspection. **We have been doing business for over a quarter of a century** and have outlived nearly all the old advertisers. Square dealing and satisfaction to the buyer have been responsible for our ever increasing trade. We want to tell you more about our great factory, our mammoth poultry plant, and our methods of doing business. We have just issued our annual poultry book and guide which has cost us thousands of dollars to produce. It is not a catalog exclusively, but as a text book on poultry breeding in all its branches it is superior to any book issued. It tells about our great poultry farm where we raise and handle thousands of high-grade birds that go to every part of the world each year. But come for yourself and see—we have the goods. Write to any bank or express company in Freeport and they will verify every statement which we have made here. Be sure and send for this book today. Send 15c to cover postage, etc., and if you think that the information on poultry keeping alone, in the book is not worth the money we will cheerfully refund it to you.

YOU (Whoever You Are) CAN MAKE MORE MONEY FROM FISHEL'S EGGS FOR HATCHING!

HOW?—you ask. AND WHY?

The quality of the birds determines the quality of the eggs. Eggs from flocks of **such uniform excellence** as Fishel's White Wyandottes will produce poultry that is a credit to anyone—and that are **profitable** besides. No uncertainty about Fishel's eggs—they **are** right—they **must be** right.

Fishel's Eggs May Not Be the Cheapest to Buy, but They Are the Cheapest to Use for Hatching

You can buy eggs for less **money**—for a smaller sum **on the start**—but, what about the "wind up"? What about **results?** There's where you appreciate the quality you have purchased when you buy Fishel eggs.

When you pay $10 for a setting of 15 (from our best breeding pens) we say: "This man wants 15 eggs—he has paid us sixty-seven cents **each** for them—and we want him to get **at least one dollar in value for every single egg."** Not only that, but we see that he **gets it.**

And, if you buy eggs from our fine flocks of free range White Wyandottes, for $10 per 100, we give you **more for the money** than you can get anywhere else. How can we do it? From a lifetime of experimenting—of perfecting—of selecting—mating—and selling. From our experience with Poultry and Prospects, we know **what** the fowls must be—and **what** the prospect must have.

We've Told You About White Wyandottes. So many of them, that we **know** you haven't been able to remember all of them. But if you want more evidence—more proof—**before** you buy send for our catalogue. If you want your eggs **on time**—"when you want them"—then order direct from this ad. It would be unfair to put your order ahead of those we received ten days ago—and we can't do it. First come, first served.

we are granted permission to print our Order Blank in this advertisement so that everybody can get one of our famous Incubators, Brooders, Sprouters without a day's delay or unnecessary correspondence. For instance, send us

$5.75 enclosed with order and we ship you immediately our 150-egg **Reliance** Incubator, backed by our Special Guarantee. No waits, no trouble or letter writing.

Guaranteed
To Hatch as Many Chicks as any $15 or $20 Machine

Fully Equipped
No Extras to Buy

1914 Reliance Incubator

Nothing like this has ever been offered before. We are the first manufacturers to print an order blank in a publication and bind ourselves, in the order, to make good our claims or refund money as per our guarantee. Read our Four Big Bargains. Take your choice of No. 1, 2, 3 or 4. See how much you can save. And, remember, when you get a **Reliance,** you get an incubator that lives up to the manufacturers' guarantee. **It practically runs itself; it requires very little oil for a big hatch and it hatches every hatchable egg put on the egg tray.**

The **Reliance** is a new model—**a 1914 machine**—and because of its perfect construction and improved regulator system, it is sure to become the hatching sensation of the year. You or any one can be sure of success with it. Even beginners can get best results—even to **100 per cent hatches**—by merely following the **simple directions** sent with each machine.

The **Reliance** is guaranteed to make chicken-raising pay big profits. No losses, no repair bills, no extras to buy, no waste of oil. Better order yours—incubator and brooder—right now from this ad.

The 1914 **Reliance** is made of best lumber. Side walls and top are made of three thicknesses—cold can't get in, heat can't get out. Equipped with best regulator, thermometer, egg tester, lamp, egg trays. Beautiful finish, handsome steel legs.

Full description, circular matter, incubator and hatching facts sent free on postal request or with order.

April and May Chicks Are The Best

READER, the hatching and brooding season ***is late*** this spring—fully a month late! This is true because of the extreme cold weather in February—a condition ***that lasted*** well into the month of March. The hens felt the cold, stormy weather and ***shut off*** much of the egg supply.

A Real Incubator—Hatches Every Egg That Is Worth Hatching

AS A GENERAL RESULT the great bulk of chicks this year will be hatched DURING THE MONTH OF MAY. Of this there can be no doubt. Furthermore, taking the country as a whole, May is by far the ***best month*** in which to ***hatch chicks*** and start them on life's journey. The ***weather*** then is favorable, the ***ground is dry*** and healthful, "the green is in the grass," as the saying is, and May-hatched chicks every spring ***do much better,*** as a rule, than do those brought out of the shell at any other time of the year.

THEREFORE IT IS NOT TOO LATE for you to get that incubator you were figuring on, ***provided*** you can get it delivered to you promptly! And just here ***we can help you***—can serve you well. We conduct SIX PLACES OF BUSINESS—six stores and warehouses—in the United States and ***now have in stock*** at each of these places a large and ***complete line*** of Cyphers Incubators, Cyphers Brooders, Cyphers Portable and Adaptable Hovers— and WE GUARANTEE to fill your orders the same day we receive them, or the next day following, at any one of these six places of business. Do not lose ***an entire year*** by waiting until next spring, but write, ***telegraph*** or telephone your RUSH ORDER ***today,*** to our place of business nearest you as given herewith. Do not wait—ACT NOW.

Every Hatch a Profitable One

Fowler, Vt., August 9, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

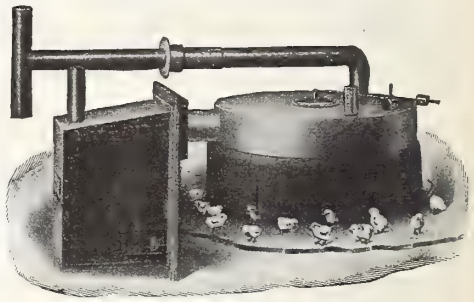
As a customer of yours, I believe you will be ***glad to learn of my success*** in the poultry business the past season. I sold my chickens this year when they were a day old.

I now have one No. 1 Standard Cyphers Incubator and one of your No. 3 machines and ***have had splendid hatches*** from them first to last, as the following record will show:

No. 1 Incubator:			*No. 3 Incubator:*		
	Fertile Eggs	Chicks Hatched		Fertile Eggs	Chicks Hatched
April 3	132	123	April 8	287	273
" 26	128	121	May 1	319	302
May 19	138	132	" 24	370	354
June 10	128	124	June 17	368	361
July 4	132	128	July 10	350	342
" 27	135	122	Aug. 2	365	353
Aug. 18	136	131			

In addition to excellent hatches obtained with these machines, I had ***strong, vigorous chicks in every hatch.*** Have found Cyphers Incubators easy to operate, self-regulating and automatic as regards moisture and ventilation.

Besides selling day-old chicks, ***have raised a fine lot for myself.*** I bought four of your outdoor brooders and have used them with fine results. Have ***also used*** your Scratching Food, Growing Mash and Chick Food. Your brand of chick food is ***the best and sweetest*** of all chick foods I have ever tried.



I am recommending your incubators, brooders and foods ***to my friends and neighbors.*** You certainly have treated me fairly in all business matters.

Sincerely yours,
WM. E. MILLS.

Immediate Shipments Guaranteed

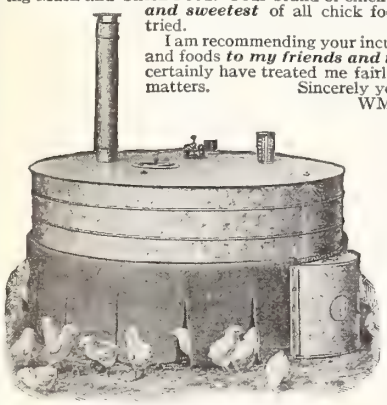
Thanks to our Big New Factory, we now have complete stocks of *Incubators, Brooders, Hovers* and all other important appliances at *every one* of our SIX PLACES OF BUSINESS and hereby *guarantee* to fill your orders within 24 to 36 hours after they are received.

Telegraph, telephone or mail your order to us, say "rush" if you are in a *special hurry* and we will fill it from Buffalo, Boston, New York, Chicago, Kansas City or Oakland, either the same day we get it or the *next day,* WITHOUT FAIL. Lose no time—take no chances.

Cyphers Adaptable Hover

Fire-proof, Wind-proof, Insurable, Self-regulating and Automatic in Ventilation. Best Device in World's Markets for Use in Home-made Brooder Cases, Colony Coops, Roosting Coops and Portable Houses. Price, Complete, Safely Boxed for Shipment, $8.50 free on board cars at all our Places of Business, except Oakland and London. Oakland F. O. B. price, $9.50. Entirely safe to order sample from this advertisement. Send order to place of business nearest you, thus saving time and most of freight or express charges.

Cyphers Adaptable Hovers are Fire-proof and Insurable



7646 Bond Ave., Chicago, Ill., August 4, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

We are now using your Incubators, Adaptable Hovers, etc.—***and are glad of it.*** We started last year with a cheaper equipment, both in incubators and brooders, trying several different makes—all of which ***have been sold or are now for sale.***

We make ***our own brooder cases*** in which to install your Adaptable Hovers, patterning our cases after your Style B Brooders as advised to do in your free booklet, "Best Methods of Brooding." We put about 75 chicks in each hover and ***leave them there six weeks,*** when they are put in colony houses. We would not again use a type of brooding hover that is not fireproof. ***No more of the cheap and dangerous kind for us.*** They are death to the chicks and liable to burn up everything in sight. We are pleased to give our experience, so that other poultrymen will not repeat our mistakes.

E. M. CASKEY.

Cyphers Portable Hover

Set it down Anywhere Indoors and you will have a Safe and Comfortable Place for the Little Chicks. "Movable" at a moment's Notice without even turning down the Lamp Flame. Weighs 35 lbs. in use. Price, Complete, Safely Boxed, $8.50 free on cars at all our Places of Business, except Oakland and London. Oakland F. O. B. price, $9.50. Entirely safe to order a sample from this advertisement. Weighs 40 lbs. by express.

Please Read Every Word of This Report

Asheville, N. Y., August 4, 1913.

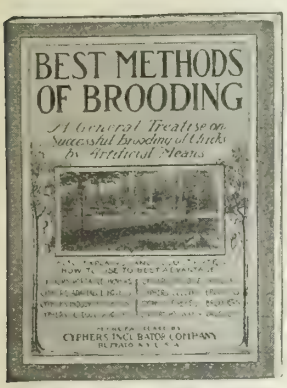
Cyphers Incubator Co., Buffalo, N. Y.—

Your Portable Hovers ***gave us wonderful results*** and have proved most satisfactory.

During the season of 1912 my chick loss, previous to the end of the third week, was disheartening. This year, thanks to your Portable Hovers, ***the loss was almost nothing.***

Better still, the chicks are ***far hardier*** than those of the same stock in 1912 and I can assign no other reason, after careful investigation, than the benefits derived from the ***patented regulator*** which forms a part of these Portable Hovers and insures a uniform temperature, together with the ***automatic ventilation*** which gives a continuous supply of fresh air to the chicks. This past season we ***had no leg weakness***—something that gave us much trouble the year before.

I truly believe ***that your Portable Hovers*** are the very best on the market. I have tried others that were claimed to be "just as good," ***but they were not.*** Your Balanced-Ration Poultry Foods far exceed ***in quality and results*** the other brands we have tried.



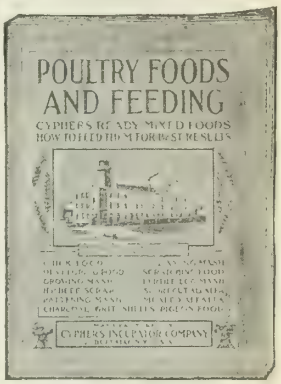
E. W. GAGE, Prop.,
Chautauqua Lake Farms.

FIRE INSURANCE LABEL!

Remember that every Cyphers Incubator has been passed on by expert engineers, representing the National Board of Fire Underwriters and that each and every machine bears the brass "Inspected Incubator" label. The label talks! Other manufacturers may *claim* that their incubators are fireproof, and have been *approved*, but the Official Label is what counts. Without it their claims are simply "hot-air." Do not be misled.

Proper Brooding and Correct Feeding

PLEASE think this over—Don't Duplicate Work! That is a "success secret" in ***any*** business. Don't ***do over again*** what someone else has already done ***for you.*** In brief, don't invest or waste ***your*** time and money in ***needless*** experimenting in poultry raising for greatest profit, when the Cyphers Company ***already*** has blazed the trail for you—has ***found*** the way to ***surest*** and quickest success.



Cyphers Company's Latest New Free Book. Most Complete Treatise to Date on This Vitally Important Subject. Goes Into Every Detail From Time Chicks are Taken From Incubator Till They are Placed on Range. Book of 52 Pages, 7⅛ x 10 Inches in Size. Well Illustrated. Mailed FREE on Request to Any Address.

For this ***very purpose*** our company owns and operates a $75,000 Experiment and Demonstration Poultry Farm. Results are here ***recorded;*** the most modern, most successful methods are ***proved up*** and then passed along to Cyphers owners—to Cyphers customers—through Cyphers Company's free booklets, free Service Bulletins and our As-Often-As-You-Need-It Personal-Letter Service.

Cyphers Company methods are ***established*** and ***successful;*** they enable you to cut out ***all money*** for wasteful experimenting; they enable you to ***avoid losses;*** to go straight ahead, surely and safely, ***with the best results.*** Our own ***proved*** success, ***combined*** with that of many thousands of customers, is YOURS when you adopt Cyphers Company methods and use CYPHERS STANDARD POULTRY EQUIPMENT.

This Book Would be Cheap at $5.00 Per Copy, Judged by Actual, Detailed Value of Contents. Tells How To Produce Broilers, Fryers, Roasting Chickens and Capons; Also Exactly How to Feed the Layers and Breeders. 52 Pages, 7⅛ x 10 Inches. One FREE COPY on Request to Any Address.

CYPHERS FOODS AND METHODS

"Chicks Began to Grow About Twice as Fast"

New Castle, Ind., August 24, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

At the beginning of the season I tried out a chick food which I thought was alright, but my chicks would eat only about half of it, leaving the balance. There seemed to be something in the food that they did not care for. One day I was telling a poultry friend about my experience and he advised me to try your Cyphers Balanced-Ration Poultry Foods. I did so immediately. What was the result? The chicks ***cleaned up every particle*** of your Cyphers Chick Food and in a week they ***began to grow about twice as fast.*** I have found Cyphers Poultry Foods to be always ***pure, free from dirt and chaff*** or any kind of ***waste material*** that is to be found in most brands of prepared poultry foods. Have received several of your Cyphers Company Service Bulletins and think they are fine. They contain much valuable information.

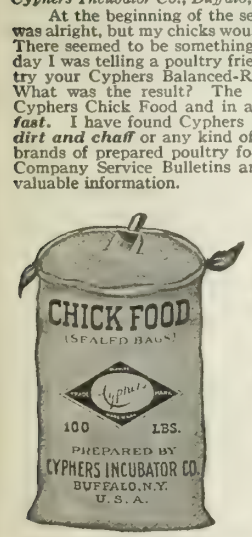
H. M. SPANNUTH.

"Am Free to Attribute My Success"

Oxford, Pa., July 17, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

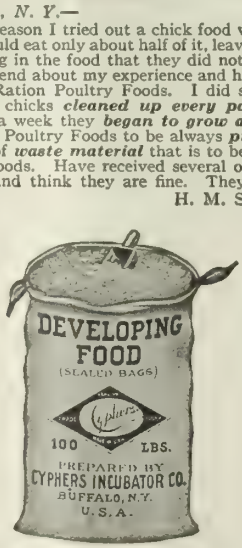
My chicks thrive better on your Dry-Grain, Balanced-Ration Chick Food than on any other ration I have ever used. I find that your foods contain nothing but ***clean, pure, sweet grains*** that the chicks eat up quickly, which has not been the rule with other brands of foods that I have used. I use Chick Food for the first four to six weeks, and thereafter change over to Developing Food. ***Have lost very few chicks this season.*** Your Chick Food has been fed in deep litter consisting mostly of Short-Cut Alfalfa. ***Am free to attribute my success*** to this method of feeding and to the superior quality of your poultry foods. All of your supplies have proved to be superior products and are sure to give entire satisfaction if used as directed, with common sense and good judgment. I also have been treated with most careful consideration when buying goods or asking for general information.



W. I. SCHNEE.

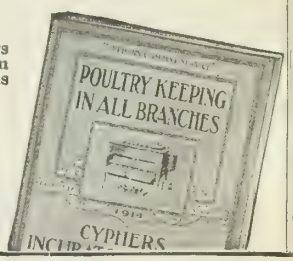
"Must Give Your Foods a Large Part of Credit"

Coweta, Okla., July 17, 1913.



Cyphers Incubator Co., Buffalo, N. Y.—

I have tried out several makes of incubators, brooders and poultry foods, but the Cyphers line of goods has given us more good value than any other we have ever used. This year I have had wonderful hatches in my Cyphers Incubators and have successfully brooded them. I must give your Balanced-Ration Poultry Foods a large part of the credit for my fine flock of fowls. Your foods possess the ***right combination of grains to produce bone, muscle and feathers.*** I followed your plan of "deep litter" feeding, and must say I never saw such ***rapid growth*** and birds so full of ***life and vim.*** It is a great pleasure to watch the little rascals scratching for the Cyphers Foods. Yours truly, H. B. EGAN.



Cyphers Company's Chick Food

This 100-Lb. Bag will feed 100 Newly-Hatched Chicks Four Weeks, or 50 Chicks Six to Seven Weeks. Price $2.50 F. O. B. Buffalo, Boston, New York City, Chicago and Kansas City. Price F. O. B. Oakland, $3.00.

Cyphers Company's Developing Food

This is a Medium-Granulated, Five-Grain Balanced Ration that we Advise our Customers to Feed to Growing Chicks Between the Ages of Six to Twelve Weeks, Before They are Given Whole Grain.

WHITE WYANDOTTES and
S. C. RHODE ISLAND REDS

Several other **Firsts** went on birds of **Owen Farms' Strains.**

This wonderful percentage of **Firsts** at **America's Leading Shows** is merely a repetition of past years, and **Owen Farms' Records** at the shows where **real competition** is found stand alone and unequaled.

OUR CUSTOMERS ARE TODAY OUR LEADING COMPETITORS
AND WE ARE GLAD TO SHARE THE HONORS WITH THEM

Every variety line bred for from nine to twenty years and no strains of recent origin can possibly have the producing value of the established flocks on Owen Farms. Weigh carefully every statement you read and comparison will show you the pre-eminence of my flocks.

You may win without these bloodlines, but you will find it practically impossible if your competitor meets you with Owen Farms Birds.

AS UTILITY BIRDS

These flocks each year have proven their exceptional merit. Wonderful reports of high average egg yields come in from customers. One customer has reported 262 eggs laid in 290 consecutive days by a pullet bought of us, and many other reports are almost as good. My flocks have perfect health, size, bone, substance and bodies with tremendous egg capacity. **Treat them well and they will do the rest.**

1914 MATINGS

Of all varieties are the best ever made on Owen Farms. My customers for **eggs for hatching** or **baby chicks** will receive remarkable value this year, as eggs and baby chicks have never been sold from birds of equal quality at prices approaching those I am making for 1914. **Early booking insures delivery at exact time you want them.**

REMEMBER! More prize winners are produced each year from the middle of April to the middle of June than during all the other months combined.

MAURICE F. DELANO, Proprietor **FRANK H. DAVEY, Superintendent**

"U. R. Fishel More Than Pleases His Customers"

Ark., Oct. 23, 1913.

Dear Mr. Fishel: I suppose you will remember the birds you sent me last February. I sent four pullets and two cockerels to Ft. Smith a few days ago and won first and second cockerel, first and second pullet and first pen. Think this was doing fine. Yours very truly, A. W. Bevers.

Mich., Oct. 14, 1913.

Dear Sir: I exhibited the White Rocks at the local County Fair and they received all the prizes.

I bought a $50.00 pen from.....and the Rocks from you in my mind are better birds; if I had purchased this pen from you last fall I would give $100; for I have wasted the summer on inferior birds and know now, that I made a mistake. Yours very truly, Wm. L. Morrison.

Ill., Dec. 5, 1913.

My Dear Mr. Fishel: Perhaps you will remember that a year ago last month I visited your farm and purchased three pens of selected breeders for $100. From these matings I hatched 400 chicks and succeeded in raising 325 of them.

Last week I exhibited fifteen birds at our local county show and besides three firsts, three seconds, three thirds and two fourths, I captured the Greene County Cup for the best pen in the American Class.

Yours sincerely, R. A. Pritchett.

Texas, March 11, 1913.

Dear Sir: I am writing you to let you know how I came out at Fort Worth. I won first cockerel, first pullet, third pullet, second pen and special for best male and female in the White Plymouth Rock class and there were eighty of them.

I am certainly pleased with them and you may count on an order from me next fall for one cockerel, one hen, one pullet and one cock.

I want to tell you of one fellow who had sixteen Rocks entered. I asked him what strain they were and he told me they were his own and that they had never been defeated. I had only six entered, got two firsts, one second, one third and two specials and he didn't get a place.

Yours truly, Sam. W. Smith.

Capital Poultry Farm, Okla.

Dear Sir: When I bought this farm the party I bought it from said that the White Plymouth Rocks on the place were hatched from eggs bought from you. I hatched some of the finest birds from them this spring that there is anywhere in this state. I entered them at Oklahoma State Fair and took first cockerel, first, second, and third pullet.

I had intended raising only White Leghorns and as the White Rocks have done so well for me I have decided to keep up the Fishel Strain of White Rocks.

Respectfully, W. S. Clark.

Texas, Nov. 29, 1913.

Dear Mr. Fishel: This letter is to thank you for selecting such a good cockerel. He is well worth the money we paid for him. He and four of my January pullets won sweepstake prize at our Poultry Show and several other prizes.

Respectfully yours, C. G. Pitts.

Mass., Oct. 12, 1913.

Dear Sir: I received the cockerel you sent me in fine shape, and was very well pleased with him. I showed him the next week and won the blue ribbon, in fact I won first on every White Rock I showed. I cannot speak too highly of the Rocks that come from Fishelton. I shall place more orders with you later.

Yours truly, Alfred E. Nye.

La., Oct. 10, 1913.

This is what I just did at our County Fair with your strain of White Rocks: First and champion hen, first and champion pen, eight pens in competition, first and second cockerel, first and second and champion pullet, 42 pullets in competition. No cock entered.

Yours truly, J. H. Belanger.

Mass., Oct. 10, 1913.

Dear Sir: Just a few words to let you know of my success with your White Rocks. I received the five pullets and cockerel March 24 and I began March 28 to save the eggs for setting. All told I set 124 eggs and hatched out 105 chickens and I raised 96 to maturity which is wonderful in mind of the fact that I began to save so soon after arrival of pullets, and so on until I hatched 105 chickens. From March 28 to May 28 the five pullets laid a total of 167 eggs and during that time three of the pullets set and brought out a batch of chickens so I think they did extra fine.

Respectfully yours, C. O. Smith.

Ala., Oct. 24, 1913.

Dear Mr. Fishel: I made a clean sweep at the Fair, three exhibitors in White Rocks, beside myself. I was offered $50.00 for hen that I had on exhibition—she is certainly very nearly perfect. I raised her from select setting of eggs bought of you. I like the hens you shipped very well.

The judge at our show seemed carried with my exhibit of White Rocks.

Yours very truly, Jesse C. Maxwell.

Pa., August 4, 1913.

Dear Sir: In February, of 1912, I sent to you for a two-year-old cock bird, which I received all O. K. and was more than pleased with him. In the fall of the same year I exhibited four pullets and one cockerel, bred from him, at the Fair. I won first prize on cockerel, first, second and third pullet, which made a lot of good advertising for me. Yours truly, F. R. Allison.

See my ad on Page 700 this issue

RED SUSSEX FARMS

Importers and Distributers of

England's Best Red Sussex

CHAMPION STRAIN

Winners of more Regular Premiums, Silver Cups and Specials at The Crystal Palace and Dairy Shows in the Strongest Competition than all other strains combined.

SILVER CUP GIVEN

to customers winning first cockerel and pullet at shows of 600 or more entries. (Only one cup to the customer.)

Pen "A". Headed by cockerel RED PRINCE. The most wonderful colored Red Sussex in America. One even shade of wine color. Five point comb, great wing, sound green-black tail, white shanks.

Pen "B". Headed by cockerel RED CHAMPION. Ideal in type and head points. One even shade of rich dark red from head to his sound green-black tail; shanks white.

Pen "C". Headed by cockerel DAIRY KING, the most wonderful type and colored Red Sussex ever produced. Absolutely sound in wing and tail. Head points ideal, shanks white.

Pen "D". Headed by cockerel PALACE BOY, a marvel in type, color and size. The counterpart of Red Champion. Very red and will produce great pullets.

Pen "E". Headed by cock RED KING, another wonderful bird in even dark red from head to tail. Very long in back, grand head points and stout white shanks.

Pen "F". Headed by cock RED WOODROW. Very dark wine color. A typical Red Sussex all over, and all the time a great sire of winners. Fine head points and white shanks. RED WOODROW and RED KING are without question the finest Red Sussex cocks in America, and show that Red Sussex males molt Red.

These great males are mated to England's best females and will produce winners for any show in America. Eggs $15.00 per 15 straight. Order from this ad. and deposit $5.00 with order. Mating List. Satisfaction Guaranteed.

BUILDING MATERIAL PRICES

Never again will such remarkably low prices exist. Don't delay—send your order at once. Act now.

ROOFING

Corrugated STEEL ROOFING

1¼c Per Square Foot

Here is the chance of a lifetime to buy the best roofing in the world, at a mere fraction of its real value. Our enormous buying power enabled us to pick up for spot cash a stock of this brand new, perfect corrugated, "V" crimped and Standing Seam Roofing and Brick Siding, at a tremendous sacrifice—way under what it is actually worth. Immediate cash needed made possible this purchase. Just another chapter added to the long list of our famous bargain sales.

Corrugated STEEL ROOFING

Practically Indestructible

There is nothing else that compares with corrugated steel roofing for real protection. It makes a long, lasting roof. Is fire, rain, frost, wind, sun and lightning proof—warmer in winter—cooler in summer; and under ordinary circumstances does not leak, rot or warp, neither does it taint rain water. You can depend upon it that Corrugated Steel is the best material for roofing, siding and ceiling.

At 1¼c per square foot, we furnish our grade CE-700 Steel Roofing, in sheets 22x24 inches x1¼ inches. This price is delivered on board cars at Chicago.

Galvanized STEEL ROOFING

2¾c Per Square Foot

Another big Steel Roofing Bargain. Several thousand squares of the very highest grade specially coated, corrugated, galvanized roofing and siding, made of specially prepared steel, of superior quality. Best roofing and will last indefinitely. We'll furnish it in suitable lengths for any purpose. Only a limited quantity on hand, so we urge you to send us your order immediately. Don't wait to write us again—order today, while this stock exists. Price only 2¾c per square foot, and will outlast 4 to 1. Just drop us a line, and tell us the size of your studding and general facts, and we will help you to select proper sheets. If you are not ready to use the material now, we will reserve it for future delivery, if you will give us a small deposit on account. This price of 2¾c per square foot is for our Lot CE-800 corrugated material, and is delivered on board cars at Chicago. If you prefer some other style, we will furnish it. We have this same grade in "V" crimped, Standing Seam and Brick Siding. Samples on application.

Ready Roofing With Supplies

62c Per 108 Square Feet

We have several thousand squares of a superior quality Ready Roofing, which we are offering in our AJAX BRAND, 1-ply, at a price of 62c per square of 108 square feet, including necessary cement and caps to lay it. This is undoubtedly the most remarkable bargain ever offered in Ready Roofing. This famous brand is put up 3 or 4 pieces to a roll.

The price of 62c per square of 108 square feet is loaded on board cars at Chicago. We will, however, make a freight prepaid price on this same grade of roofing, including nails and necessary cement of 85c per roll of 108 square feet, and at this remarkably low price

We Pay the Freight

in full to any point east of Kansas and Nebraska and North of the Ohio River.

We will also furnish 2-ply, at 90c; 3-ply, at $1.05.

This Ajax Roofing is guaranteed to wear as long and give as good service as any Rubber Surface roofing on the market.

SEND FOR SPECIAL ROOFING CATALOG AND SAMPLES

Write at once for our Special Roofing Catalog. Free samples and full instructions for laying roofing.

Chicago House Wrecking Co.

Now operated under the name of Harris Bros. Company.

For 22 years the Chicago House Wrecking Company has been well and favorably known to the public. During all these years the four Harris Brothers have been the executive officers and owners, and for that reason have finally decided to operate under the name of HARRIS BROTHERS COMPANY.

There is no change in our business, except that in the future the four Harris Brothers will advertise and sell their goods heretofore advertised and sold under the name of Chicago House Wrecking Company, under the name of HARRIS BROTHERS COMPANY.

Our Guarantee

We guarantee absolute and complete satisfaction. There is no half way about this guarantee. Every purchase you make from us will be exactly as represented, and you will be satisfied in every way, or we will make such just amends as are within our power. We will take back any unsatisfactory article at our freight expense both ways and refund the purchase price. We refer as to our responsibility, to the publisher of this or any other publication, any bank or express company, and to the public at large.

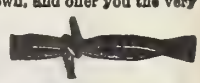
LUMBER

Complete houses and barns at an enormous saving. Never before in the history of Building Material has such an opportunity existed. We offer high grade, brand new complete lumber and building material needed for the construction of houses and barns at lower prices than ever before.

20,000,000 Ft. of New Lumber at Our Yards and Warehouses ready for Quick Delivery

We have upwards of twenty million feet of first class, brand new lumber for the construction of buildings of every kind. A wonderful stock of the very finest millwork, interior trim, etc.—enough material to construct cities and villages everywhere. It is our determination that 1914 will be the "Banner" year in the history of our Great Lumber and Millwork department, and the way we will accomplish this, is by quoting prices that undersell any possible competition. The proof of this is in our catalog and literature.

Write today and tell us what you contemplate improving or building during this Spring—talk to us plainly, and we promise you the advice straight from the shoulder. No other concern in the world is equipped such as we are. Right in our main yard and warehouses, at Chicago, we can load you out complete, at one time, and in one carload, every single article required for the improvement of the building you have in mind. No where else can you go and get such service.



Personal Service To You

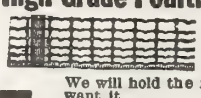
You can get the kind of service that will give you absolute satisfaction—satisfaction from the word "go." If you have ideas of your own as to the kind of building that you want, we will give you the benefit of the Greatest Architectural Department in the world. Will furnish you with plans according to your own ideas, and will quote you a price on the material that will make you a wonderful saving. Dollars saved are dollars earned.

Write today for our *Book of Plans* and Latest *Catalog of Building Material* and Supplies.

FENCING

Brand New WIRE FENCING Less Than 1 cent Per Running Foot

Biggest of all offers of the past. We come to you with the most wonderful proposition ever known, and offer you the very best woven wire fencing at a fraction of its real value; lower in price than ever before, notwithstanding that all other merchants and manufacturers have advanced their prices on fencing. We are determined to simply get all the business in sight, and with that in view, we bought up from manufacturer's sales, 150 carloads of High Grade Woven Wire Hog, Cattle, Field and Poultry Fencing, Barb Wire and Nails, in quantities sufficient to take care of our regular customers and those who will quickly respond to this advertisement.



Barb Wire Less Than 2c Per Rod

Galvanized, two-point Barb-Wire, full weight (not the light kind) put up regular on spools, containing about 100 lbs. to a spool. It is made of No. 12½ wire, with good weight barbs. Price per 100 lbs. during this sale, only $1.95. Order by Lot No. CE-600. Several thousand spools of this Barb Wire, Painted, price per 100 lbs. $1.75. Order by Lot CE-500. Also have in stock 1000 spools of light weight, new galvanized barb wire, put up 80 rods to the spool, made of No. 14 galvanized wire No. 16 barbs, barbs 6 inches apart; price per spool of 80 rods $1.45. Lot CE-400. We also have several other bargains. You never had a chance like this before, and we advise that you send us your order today. Don't wait until the material is sold—we cannot hold this quotation open.

GALVANIZED HOG FENCING AT A MATERIAL REDUCTION IN PRICE

100,000 rods of 26 in. Galvanized Steel Spring Wire, 26 in. high, hog fence, put up in 10, 20, 40 and 60 rod rolls, made with 7 bars, spaced 12 in. apart, with No. 9 top and bottom wires, No. 11 intermediate wires, heavier than the regular fencing offered. Price per rod, during this sale, only 15c. Order by Lot CE-900. Same fencing spaced 6 in. apart, per rod during this sale, only 21c. Order by Lot CE-1000. Other heights at proportionately low prices.

High Grade Poultry Fencing 48 in. High PER ROD 27c

A complete stock of all heights of Woven Wire Fencing for every purpose. Do not delay your order, but send it in at once, even if you are not ready to have it shipped. We will hold the material ready to deliver when you want it.

Smooth Galvanized Wire $1.00 per 100 lbs.

Sold "as is," as near as possible one guage only to the coil. Our price of $1.00 per 100 lbs. is in lots of 1000 lbs. Where ordered in other quantities our price for gauges 9 to 12 per 100 lbs. $1.25. 16,17,18 gauges, $1.45.

SOME BIG BARGAINS IN NAILS

At last we have the bargain of bargains. 10,000 kegs of genuine galvanized wire nails; will outlast all other kinds. Put up in regular kegs. Price per keg of 100 lbs., as follows:—

10 pennyweight, $2.00 — 8 pennyweight, $2.10
6 pennyweight, $2.15 — Shingle Nails $3.00

Also 5,000 kegs of Nails, mixed all kinds in a keg; good assortment, handy to have around your workshop. During this sale only, per 100 lbs., $1.38. Order by Lot CE-1100. We have other bargains in nails.

Also, in the same job, we have 5,000 kegs of Fence Staples, galvanized, per keg, $2.00. Lot CE-1400.

Crimped wire for reinforcing, cut to any desired length; per 100 lbs., $2.00 Lot CE-1300.

We have bargains in every line. Write us today for our Wire and Fence Catalog, but the best thing for you to do is to send your order now, and we will hold for shipping instructions.

HARRIS BROTHERS CO., 35th & Iron Sts., Chicago

Above All—The Henderson Strain

AMERICA'S FOREMOST

Barred Plym. Rocks for Exhibition and Utility

Madison Square Garden, New York, Chicago and St. Louis Winners

This grand strain is large framed, with wonderful type, has long, deep bodies, broad backs, well spread tails carried low, and that snappy distinct barring to the skin, that wins in the best of competition.

My first prize cockerel and grand champion male at Chicago 1912 in a class of 54 of the best in the world proves that my strain carries the maximum of quality in Barred Rocks today. His type and barring created a sensation among Barred Rock breeders of the world. A number of his wonderful sons will head my 1914 breeding pens.

When you start to make up your breeding pens this year and find that deficiency which you desire to overcome, **remember that I have the strongest lines of breeding Barred Rocks in America**, and can furnish males and females with the quality desired to balance the pen and improve the progeny.

My **Barred Rocks** have won consistently at all the large national shows for the last 20 years in all competition as a result of being line bred and pedigreed. Compare my winnings with those of any other breeder and form your own conclusion as to who has the best producing strain.

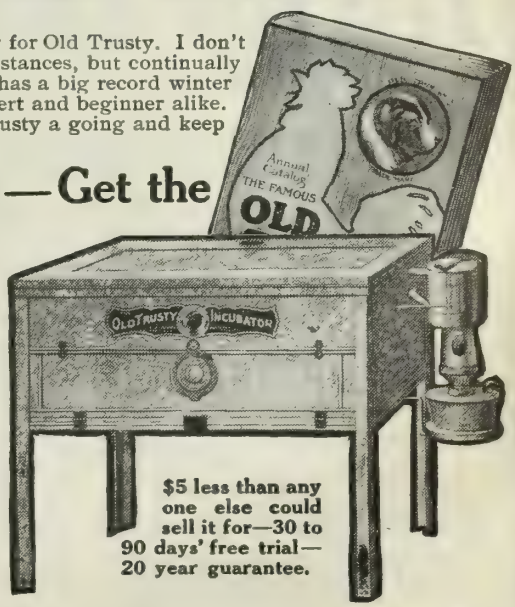
First Prize Pullet Bred Cockerel, Coliseum, St. Louis, 1913

For the season of 1914 I will mate 50 breeding pens in both my **Cockerel** and **Pullet lines**, from which I will furnish eggs for hatching at prices quoted in my mating list and catalog which describes each individual specimen that I will have in breeding. These pens will contain my Madison Square Garden, N. Y., Chicago and St. Louis winners and their descendants. The inherent characteristic quality as bred in the **Henderson Strain** both in the Cockerel and Pullet lines, and demonstrated by their public record in the best show rooms in America enables me to mate for the season of 1914 the strongest breeding pens of **Barred Rocks** in the world.

Write for my new Catalog-Mating-List which minutely describes these pens and **the largest exclusive Barred Rock farm in the world.**

SATISFACTION GUARANTEED

W. W. HENDERSON, BRIDGETON, ST. LOUIS COUNTY, MISSOURI



Big Hatches in Coldest Weather Come Easy with OLD TRUSTY

Winter hatching has always been an easy thing for Old Trusty. I don't mean for a year or two under favorable circumstances, but continually and everlastingly. As an average hatcher it has a big record winter or summer, north or south, in the hands of expert and beginner alike. Now is the time to get started. Get your Old Trusty a going and keep it on the job right through the winter.

Now Is the Time to Start—Get the Early Profits Next Spring

Old Trusty average is something over 80%. We guarantee it to be that much or better. We have made the guarantee for years and years, and know that Old Trusty can make good on it. I could show you sensational hatches, too, but I don't believe that's the thing that would interest you. What you want is the average, and that's where the Old Trusty has no equal. I might guarantee you 95% hatches, but I think too much of what you are going to think of me later.

$5 less than any one else could sell it for—30 to 90 days' free trial—20 year guarantee.

Old Trusty Book Tells All About It—

Let Me Mail a Copy FREE!

Get the plain facts on winter hatches. Why let the chickens be idle when they can be making good profits? The Johnson plan is worth getting. Mail a postal or letter for it today. If you order I'll prepay freight and ship machine the day the order arrives. Write for the book anyway. Address

Gar.,** New York, Dec., 1913, 198 birds competing, I won 4 1sts, 1 2nd, 2 3rds, 1 4th, 2 5ths and 4 specials.

M. R. JACOBUS Box 3-J RIDGEFIELD, NEW JERSEY

Tompkins' Winnings—

What They Mean to You, a Possible Buyer

NEVER in all my showing experience have I been up against such keen competition as in the past season. Take the New York show at Madison Square Garden, for instance; there were 300 entries of Rhode Island Reds.

In all that lot there were mighty few below average—you who were there know that full well. Still Tompkins' Strain walked away with seven ribbons and all shape specials on Single Combs, First Cock and the Item Cup being among them.

Now I might make a good winning at one show a year, but fall down on the others—but I don't. At the Palace Show in New York, at Boston and at the Madison Square, New York, Tompkins' birds made big winnings, and each time under different judges.

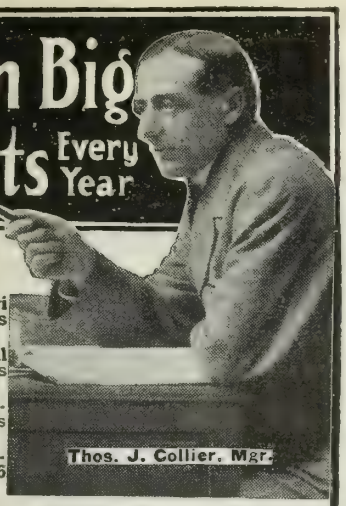
Another thing to bear in mind, is that this isn't the first year Tompkins has won. **It's the twelfth.** Year after year we have captured Blue Ribbons. My strongest competitors now are birds of my own strain belonging to my customers. They are giving me the merriest kind of a hustle at the shows.

This grand bird won first ribbon and shape special in the December, 1913, Madison Square Show, New York, against the strongest competition I have ever experienced.

At the Palace Show at New York last December, this Tompkins Top Notch Special walked away with the much contested for first prize. First on Rose Comb and first on Single Comb in the one year at different shows awarded by different judges.

Of far more importance to me than all the first and other ribbons I won, is the fact that at all three of the big shows I won Blue Ribbons and specials for Best Display. The real meaning of which is that my strain of Reds **average high right straight through.** It's not a case of picking out a few from a large flock. Every one who knows my little old farm up at Concord, knows I don't carry a big flock of birds, **but those I do have are superior.**

These, then, are the vital things to think about in deciding where to place your egg orders. They are the things that should govern your purchase of pens and single birds whether in rose or single combs.



My Mating List is ready. My new catalog has a full list of my 1913-14 winnings. Send for both. Orders are filled in order received, which means there are sometimes certain advantages in being among the first.

LESTER TOMPKINS

Tompkins' Rhode Island Reds

Concord, Massachusetts

Wisconsin Wins In Big Hatching Contests Every Year

Winner 1910-1911-1912-1913

Mrs. J. McMahon, Veedersburg, Ind., won in Missouri Valley Farmer Hatching Contest, hatching 125 chicks from 126 eggs.

Mr. C. B. Armitage, Atwater, Ohio, won in Successful Farming Contest, hatching 181 chicks from 181 eggs in two hatches.

Mrs. J. W. Mize, Vaughn's Mills, Ky., won in Successful Farming Contest, hatching 208 chicks from 209 eggs in two settings.

Mrs. F. H. Lewis, Montrose, Pa., in 1913 won in Successful Farming Contest, getting 96 chicks from 96 eggs in one setting.

These contests were open to all makes regardless of price and prove beyond question that the famous Wisconsin machines **are the best for the money in the world.**

I stand ready to prove to you that Wisconsin Incubators are the best built and best equipped machines in the world for the money. You can't get bigger or better hatchings even if you pay twice the price. I build the outer walls of my incubators of Genuine California Redwood—costing 4 times as much as materials some manufacturers use. If you will write for my catalog, I will gladly mail you a sample of the lumber so you can see the quality and compare it with others. If you do this I know you will order a Wisconsin. One hatch will pay for your machines and more. If you are not perfectly satisfied, simply write me—send the goods back and I'll not only return your money, but pay the freight charges and charge you nothing.

180 Egg Incubator and 180 Chick Brooder Both for $11.50

ORDER DIRECT FROM THIS AD

130 Egg Incubator Chick Brooder

Both Machines For Only $10

Freight Paid East of Rockies

You can send in your order direct if you wish and save time. Money back if you are not pleased. I have been advertising in this paper for years. The publishers know me and know that I do just as I agree. I am undoubtedly making the readers of this paper the most remarkable offer on high grade incubators and brooders that has ever appeared in the paper. You take no risk. I give

30 Days Trial and 10-Yr. Guarantee

Why Take Chances

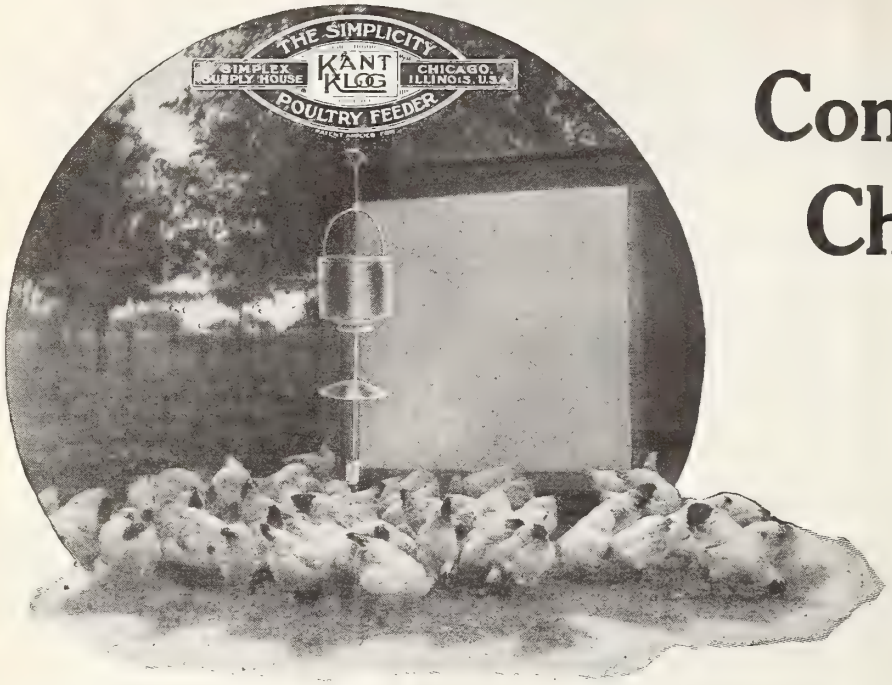
Get This Free Book

Find out what an Incubator is made of before you buy.

Write for Free Catalog and we will send you a sample of the Redwood our Incubators are made of.

Wisconsins are bigger, better, more value than ever—no increase in price. Incubators have hot water heat, double walls, dead air space between, double glass doors, copper tanks and boilers, self-regulating. Nursery under egg tray. Incubator and Brooder shipped complete with thermometers, lamps, egg-testers, all set up, ready to use when you get them. Incubators finished in natural colors showing high grade California Redwood lumber used—not painted to cover inferior material. If you will compare our machines with others we will feel sure of your order. Don't buy until you do this—you'll save money—it pays to investigate before you buy. Money back if you are not satisfied.

WISCONSIN INCUBATOR CO., Box 76, RACINE, WIS.



POULTRY FLATS

Are Sure to Revolutionize Poultry Raising for Profit, Because:

1—You need no brooders, and these alone are a great expense.
2—Each Flat will brood and raise 600 chicks, and do it right.
3—Each Flat is a unit—a basis of calculation.
4—Each Flat will house and winter without fire 72 old birds.
5—All work is done under cover and you need not move three feet from one spot in doing it—no exposure to weather for man or birds.
6—Easily cleaned—no lice.
7—You can build one in your back yard.
8—Covers 24x36 feet and includes six runways. Can make runways as large as space will permit.
9—In the Flat you have everything you need, at one cost—a complete plant.
10—If you build a common, ordinary poultry house, your extras will cost more than an Ott Brooder and Winter House combined, and then you only have the old way.
11—One Flat will make you money right off the reel.
12—With a Flat you are starting right. One will make you money. Build as many as your time and means will permit. any one, who is at all handy with tools, can construct one.

Read the book "Poultry Flats" as written by Mr. Edward Amherst Ott, the man that knows and does. One man sold $800 from just one, on a back lot. The book also contains letters from those who have built in twenty-one different states. Read these. Send us 25c, that's all, and we will send you the book and the INLAND POULTRY JOURNAL for six months. This paper is known all over the world as one of the best.—so do this now and you will always be glad. Address

Contented Chickens

Feeding themselves with a Simplicity Kant-Klog Poultry Feeder

IT is the one necessary poultry appliance that every raiser of poultry cannot afford to be without. No matter if you raise six or six thousand chickens, the time and feed you save, not counting the extra egg yield—more than pays the cost. This feeder will feed anything from whole corn to millet seed—it cannot clog—it is rat and sparrow proof—go away whenever you want to, you need not worry; the chickens will be fed correctly—in fact, this feeder is perfect in every way.

Bear in Mind

the world's leading poultry authorities recommend the use of properly constructed automatic poultry feeders — our guarantee of money refunded if not satisfied, is your proof that this feeder is properly constructed.

with less than ten per cent loss. Protect yourself—and your chicks—get a

Simplex Perfection Feather Brooder

the brooder that has solved the chick problem.

The Simplex Perfection Feather Brooder

is the only brooder that hovers chicks nature's way—"under natural feathers" without the aid of artificial heat. Made of galvanized iron, without wood to warp and rot, and on the inside is the hover made of NATURAL FEATHERS, which raises the chicks just as nature intended they should be raised. It is against all the rules of nature to raise chicks by artificial heat. That is why the Simplex Perfection Feather Brooder is the one brooder to use—it is just following nature's rules. No fire—no smothering—no chilling—no leg weakness—no overheating—no gases or fumes—no crowding—no bowel trouble—no fuel to buy or lamps to replace. Absolutely weather and rat proof; can be used in or outdoors. The one sure "chick raiser."

Simplex Perfection Feather Brooder Raises Your Chicks Nature's Way

Order direct from this ad—you run no risk—if the brooder is not satisfactory in every way—your money will be refunded promptly and cheerfully.

Gives Best Results—Saves Time and Money

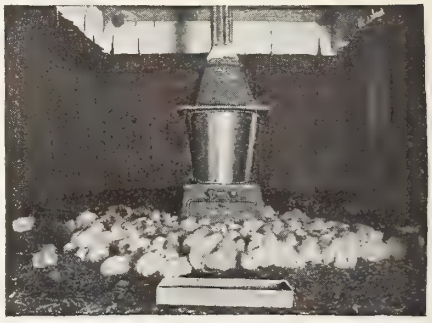
The chicks are enjoying the warmth of the hover and getting plenty of fresh air at the same time.

The Hall Colony Brooder helps raise more and sturdier chicks. It successfully cares for 300 or more chicks with less labor and expense than 50 or 100 in old style brooders.

It provides better results by saving time, money and giving largest number of healthy, vigorous chicks that reach maturity. It is the best paying investment you can make for this year and for the future.

HALL Coal Heated COLONY BROODER

"The Successful Poultryman's Best Friend"



Construction — Cast iron stove, strong, substantial, simple. Will last a lifetime. Hover made of best grade of galvanized iron, having cast iron collar, riveted. Thoroughly reinforced. Pure woven wool felt curtain—chicks will not pick at it.

Regulator — Metal thermostat, sure and reliable, operates damper, regulating combustion.

Ventilation — Slight seepage of warm air through top provides gradual change of air without draughts. Air in house and under hover always pure and fresh and free from gas.

Fuel—Anthracite Pea Coal, costs about 40 cents a week.

Advantages—Fire pot eight inches from floor—chicks cannot come in contact—radiates heat so that chicks cluster in a circle away from stove. Easy to shake grate through door of hover. Curtain conserves heat and chicks prefer dark when under hover.

Hall Colony Brooder with hover raised. A child can operate it. Easy to clean under this hover.

Write for "Broadside B," which gives complete information of profit to every poultryman. Our SERVICE DEPARTMENT places the experience of its specialists at your command.

WIN ALL HONORS AT THE NATIONAL SHOW
Held at Washington, D. C., December, 1913

Their record is unbeatable, like their superior quality. At this great National Exhibit they won Cock 1-2, Hen 1-2, Cockerel 1-2, Pullet 1-2, Pen 1 and all Specials. **At Williamsport** this season they again made their second great record, and at Cleveland, Ohio, Chicago, Ill., Boston, Mass., Philadelphia, Pa., they have proven their quality and won highest awards and honors over all, including six Championship Specials for Best Bird at these great shows.

Remember This Champion Line made its best records at America's Greatest Show, **Madison Square Garden, New York. They are now better than ever.** We have a great line of stock to select and fill orders with. They have the best of breeding quality and will give absolute satisfaction. Write for my **Special Sales List of Stock.**

Eggs for Hatching from selected matings, made on quality to produce quality. My circular and full particulars for the asking. Write me.

WEBSTER FARM, Box A, GIRARD, PENN.

Lichtenwalter's Quality

Buff Plymouth Rocks

For years they have won at the prominent shows, East and West, more prizes than any other line. They have the quality to win and to breed winners. Let me know your wants—I can please you.

Eggs for Hatching: For this year I have made but few matings. They are the best I have ever had, and from which I will sell hatching eggs without reserve. Circular and Mating List for the asking.

Hundreds of birds are exported annually in a wide variety of breeds, and we satisfy our customers in each one so they come again. **Won't you send us a trial order.** Write to England for my latest price list.

TOYNTON, SPILSBY, ENGLAND or **HEATHERWOOD FARM, FLORHAM PARK, NEW JERSEY, U. S. A.**

Cable: Carey, Spilsby

BLUE ORPINGTONS :: SILVER CAMPINES

These are the two breeds in which there is the most money, and for which there is the greatest demand. Why? Because of their wonderful laying qualities and their easiness to raise in any climate. At England's two greatest shows, viz: The Dairy and International Crystal Palace my wins in Blue Orpingtons were the following: **At the Crystal Palace Show,** 3rd Cock, 2nd and 3rd Cockerel and 2nd Pullet. **At the great Dairy Show** I won first in a class of 34 entries, the biggest class ever known in this variety. Also 3rd and 5th. **At Madison Square Garden, N. Y.,** 3rd Cock, 1st and 3rd Cockerel, 3rd Pullet, 4th Pen. Sixty-eight per cent of the winning blues at above show emanate from my yards. In Silver Campines I won 3rd Cockerel and 4th Pullet, and at Madison Square Garden 2nd Pullet, 5th Hen, 5th Pen. I can ship by return high-class breeding Blue Orpingtons and Campines at following prices. Pullets, $15, $20 and $25. Cockerels, $25, $30 and $40 each. Live delivery guaranteed in New York.

EGGS. Blue Orpingtons $17.50 (best in the world) $15 and $10 a sitting. Campines, $10 and $5 a sitting (15).

MAX DE BATHE, HARTLEY COURT, READING, ENGLAND

Vice President English Poultry Club.

SCHWAB BROS. BOX 451 IRONDEQUOIT, N. Y.

Aldrich White Orpingtons

The Strain of Quality

Your **success** as a poultry breeder depends largely upon securing **foundation stock** or eggs from the **best strain** of the **Best and Most Popular Variety** of Poultry—the S. C. White Orpingtons. They are the GREATEST WINTER LAYERS, mature quickly, making broiler size in eight weeks, and add to these useful qualities their HARDINESS, BEAUTY and GENTLENESS, and you have the IDEAL CHICKEN, and those breeding ALDRICH STRAIN have NO TROUBLE to SELL all the stock or eggs they can produce AT GOOD PRICES, as the SUPERIORITY of the ALDRICH STRAIN is now acknowledged by all.

At the great MADISON SQUARE GARDEN SHOW, December, 1913, we won BEST DISPLAY, 1st, 2nd and 3rd cockerel, 1st, 3rd and 4th cock, 1st pen, 1st hen and 2nd pullet. At the great CHICAGO COLISEUM SHOW, the week before, we won Special for Best Display, also Color and Shape Specials, 1st and 3rd cock, 1st, 2nd and 5th cockerel, 1st old pen, 1st young pen, 2nd and 4th hen, with no pullets shown. This winning at America's TWO GREATEST SHOWS, together with our win at Allentown, 1913, and Atlanta, 1913, and our wonderful winnings for the past three years in all of America's greatest shows, easily proves that ALDRICH STRAIN WHITE ORPINGTONS cannot be excelled.

At all America's best shows this season the most prizes went to those who raise ALDRICH STRAIN WHITE ORPINGTONS.

We are the largest farm in the world today making a **specialty of White Orpingtons.** For several years we have devoted all our time and attention to a single object—the perfection of the ALDRICH STRAIN S. C. WHITE ORPINGTONS, and we have put QUALITY FIRST in perfecting our strain, and supplying our customers.

Our pens are all trapnested and contain ALL THE FIRST PRIZE WINNING MALES at this season's shows at CHICAGO and MADISON SQUARE GARDEN; and eggs from these pens, absolutely the best ever mated in White Orpingtons, are $5 and $15 per setting of 15 eggs.

Send for our beautiful 60-page catalogue with color plates, and let us quote you prices.

The Golden Road to Success

ALDRICH CHICK GROWER, a Specific for Bowel Trouble, and BONE-A-TONE, a Bone-Producing, Health-Giving Tonic.

READ CAREFULLY THE EVIDENCE OF AMERICA'S MOST NOTED POULTRYMEN:

Hope, Indiana.

Gentlemen: I wish to state that Aldrich Chick Grower reached us in due time, and I must say it is **without doubt** the Greatest Remedy we ever used along this line, and we have been raising fancy poultry since 1883. It is a frame builder and a body vitalizer. We have never used anything that made chicks grow up so readily as your Chick Grower. I can truthfully recommend to all poultry raisers this **Great Remedy,** and I assure you as long as you manufacture it and it proves the good merit it has this season we will continue to purchase it of you and order more in a few days. I note what you say in regard to BONE-A-TONE. I would like very much for you to send me a quart. It is surely a good Tonic, as you have given size and fast growth to your stock.

Wishing you every success, we remain,
Very respectfully yours, J. C. FISHEL & SON.

Collegeville, Pa.

Dear Sirs: It gives me great pleasure to report that your CHICK GROWER and DIARRHEA REMEDY is one of the Greatest Remedies that the poultryman has ever been able to get hold of. It is surely a wonder. I cannot recommend it too highly. Wishing you every success, I beg to remain,
Yours truly, F. G. BEAN.

NOTE.—Judge Bean judged the pens and females in the White Orpington class last December at MADISON SQUARE GARDEN.

CORDOVA, ALA.

Aldrich Poultry Remedy Co.

Dear Sirs: I have given your WHITE DIARRHEA REMEDY a most thorough test. While I have lost **at least** 50 per cent of all chicks hatched during the last two years by **this scourge, I HAVE NOT LOST A SINGLE CHICK** since using your REMEDY. I DO NOT GUESS about it, for I know it to be both a cure and an ABSOLUTE PREVENTATIVE. To test it I would divide the hatch and feed exactly the same, but give one-half of chicks the Remedy in their drinking water and the other the **plain** water. **NOT A SYMPTOM** ever appeared in the flock given the Remedy, while in 3 or 4 days the others were all stuck up with white diarrhea. I would put them on the treatment and all chicks that were able to eat and drink QUICKLY RECOVERED, and not another chick became affected, although the sick and well chicks remained together.

I consider your cure **The Greatest Blessing** for the poultry interest of any discovery in 25 years.

Respectfully, POPE M. LONG.
Breeder of Silver and Partridge Wyandottes.

The above evidence is proof conclusive of the merits of THE NEW DISCOVERIES made by Messrs. Rawnsley and Aldrich.

PRICES: **ALDRICH CHICK GROWER, $1.00 per quart jar, enough to raise 100 chicks beyond the danger point.**
BONE-A-TONE, $2.00 per quart.

DON'T LOSE YOUR CHICKS when an ABSOLUTE REMEDY can be secured at a nominal cost

Why Not Study Gallus Bankiva at Home?

It Is Suggested That the A. P. A. Send An Enterprising Young Naturalist to Make An Exhaustive Study of Its Habits, Language and General Characteristics In Natural Habitant.

By H. H. Stoddard, Riviera, Texas

WILL you oblige me by reading, pondering upon, and inwardly digesting the following proposition, and seeing whether or not it is execrable nonsense, an insolvent theory, and a gauzy scheme which evinces the sham scientific and economic vaporings of a visionary enthusiast in an exalted state of unknowingness.

Have been hoping for a long time that some poultryman, with the spirit and enthusiasm of a born naturalist would go to one or more of the countries where Gallus Bankiva lives, observe its habits and language thoroughly under a variety of circumstances, snap it in all sorts of attitudes with camera and bring back both skins and live birds. It is too bad that the scant report of Col. Blythe is about all that we have to depend upon.

The A. P. A. can never do better in a thousand years with some of its money than to send some young, enterprising and persevering naturalist who is expert with gun, camera, and pen, all three, and have him edit a profusely and splendidly illustrated book, successive editions of which are to be sold by the A. P. A. for years and years, with but one case of original cost, in contrast to the oft-repeated big bills for Standard publishing which are unavoidable.

It would be a work sought after all over the world, and be in demand a hundred years and more from now, same as when first sheet came from the press.

The cost to the A. P. A. would be regained, so that organization would not be out one cent, and there would be founded a perpetual source of revenue, as also celebrity and honor all over the world.

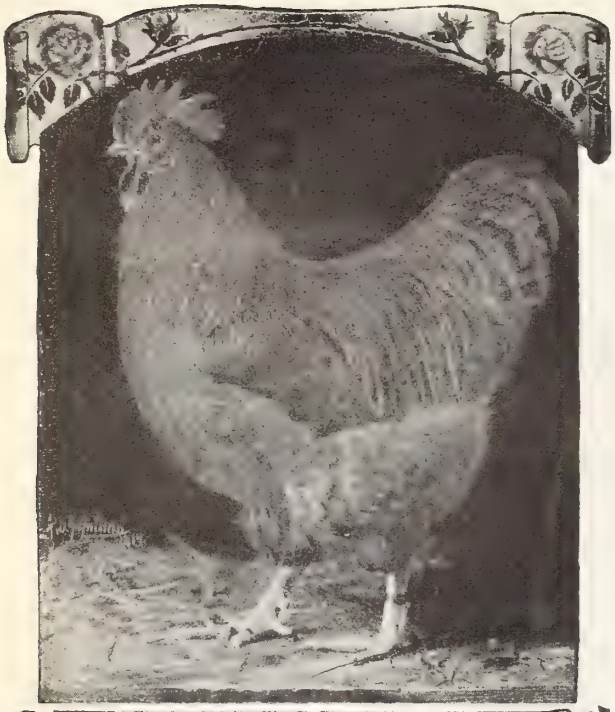
Who will take up this matter and push it to conclusion? It would add a new triumph to an Association than which there is none greater in any other branch of live stock, in either hemisphere.

Gallus Bankiva the Base.

In many cases a look backward at the wild original is helpful when some particular poultry topic is studied, as for instance suppose one is thinking of the modifications the fancier brings about and is reasoning as follows:

A great many persons never stop to consider that fanciers may, and often do, model and remodel the external shape of a fowl's body by altering the feathering, that of the back especially, without changing the shape of the body itself one iota. Take, for instance, Leghorns of the several varieties and were it possible today to slaughter types during forty-five years of Standard tinkering and place the carcasses side by each for comparison, they would appear absolutely identical if of same age and fed to same plumpness.

It is amusing to see how the uninitiated will gulp down the idea that fanciers have been "improving" the chief races of fowls, during the past half century, as regards their utilitarian qualities. The fact is, that as good Asiatics as regards size and shape can be procured among the common fowls of China today, as were just exhibited at Boston, and Mediterranean birds may be picked up at the first farm you come to, in the vicinity of that historic sea, which, if fed and mated properly, will give you as many eggs as those lauded in the "bred-to-lay" advertisements, now crowding into the poultry papers. Just as poets were born not made, so races of fowls grew, they were not made, and were essentially the same as they are now in regard to utility, when the first poultry shows were held in America.



Does the above appear as disparaging the fanciers and poultry shows? The fact is the fancier's world and what it produces has never been prized and praised enough. It has often been prized and praised in the wrong respects, that is all. As a great national game it stands with baseball and possesses more valuable features. No people ever needed hobbies more than ours, in the rush, worry and wear and tear of modern life. There is no hobby of high merit that is so universally available, or almost universally available, except in big cities, as fancy poultry keeping, and there are two special advantages it possesses:

First, it pays its way, in ordinary produce, apart from any fancy prices; and second, it is invaluable for children by affording them lessons in industry. Telling a tithe of all the benefits the fancy bestows, directly and indirectly, would mean a long story.

The New Darwinism.

When interesting problems in heredity arise, and we try to trace the modifications in species far back in bygone ages, even then our Bankiva has to be reckoned with, as in case of the study of strife, and survival of the fittest, in the histological or microscopical realm of life.

Not only does one species war to the death with other species, but each individual to a certain extent wars with others of its own species. More than this, the omnipresent strife reaches its height where we find that the body of each individual creature from moneron to man, contains an immense number of cells, each one a living organism, and that sometimes these are rivals of each other. The discovery of the competition and survival of the fittest among the living "bugs" in number incomprehensible, which our bodies contain, has been felicitously named the "new Darwinism."

FIRST PRIZE S.C. BUFF ORPINGTON COCKEREL
MADISON Sq. GARDEN N.Y. DEC. 1913 BRED & OWNED BY
HUGH A. ROSE FONT HILL, ONTARIO

Genera war with genera, the species which compose them war with each other, the individuals of the species contend for supremacy, and the cells within the individual sometimes fight to the death.

In all the wars those high up are the mildest and those at the bottom the fiercest. For instance though "man is a wolf to man," yet society, co-operation and law and order, are contrived by what is essentially a nice balancing of selfishness, to mitigate strife between individuals of civilized races. The lower stages of civilization carry on more ruthless warfare than the higher, and the Mexicans are savages compared with their more civilized neighbors across the Rio Grande. It is way down in the scale among the microscopic cells that give rise to the individual's life that the contest is severest. The hundreds of swimming cells, the spermatozoa, each alive and an enemy to the death to all its fellows, struggle to gain entrance to the waiting ovum. Only one can enter and a ready door shuts the rest out to die a lingering death. Here is the very acme of cruelty. When Rome exulted in fights between gladiators and two champions were matched, they fought till one was killed. Humanity has been appalled ever since. But Nature, often foolishly extolled as a "kind mother," arranges that one spermatozoon may fight hundreds, and crowding them away from the door where he casts off as no longer of use, the oar which was attached to his body, leaves them to perish in the miniature salty ocean which repeats the ocean in which adults of the species once lived. This emphatically is a case of the survival of the fittest, and shows that at the very first stage of embryonic life nature's favorites are the strong.

The Leghorn Tail.

Even on such a matter as Standard making our friend Bankiva has something to say or will have when live specimens are exhibited at our shows.

Whatever the angle our basic bird prefers for his caudal appendage it is very well known anyhow that the Leghorn on his native heath or on board ships hither bound, does not have the Standard sloping tail. Judge Card in the Poultry Advocate well says:

"Back in the dim ages of American poultry culture, Leghorns were much troubled with what are designated as squirrel-tails which are exactly the opposites of droop-tails; hence the reason for the last mentioned is apparent; namely, to prevent the obnoxious and unsightly squirrel-tail from ever again appearing on our American Leghorns; yet, how strange is human nature that it must needs swing the pendulum to the other extreme, which, while not as unsightly perhaps, is not beautiful and surely is no indication of stamina and vigor; of the two, the squirrel-tail bird has a greater claim to these grand qualities. Looking at the matter in all common sense one finds that the Standard requires a 45 per cent tail on males and 40 on females, which leaves over 15 to 20 per cent before a squirrel-tail appears; further than that a tail of not more than 45 per cent and not less than 35 will accept in all harmony the beautiful concave sweep of back lines and hang, well-balanced, over the oval lines of the stern and lower body. Going a little deeper into this law of harmony we find that no other fowl in existence has such a beautiful shape in its entirety as the Leghorn and why? Because the finest, the most exquisite known in nature or art are embodied in every line of the Leghorn shape. Since the memory of thinking man art has worshipped at the shrine of 'Oval Curves;' it is the theme of art in story and in verse; it has been and still is, the despair, aim, inspiration and grand aspiration of the sculptor and the devotee of the palette and brush; it is nature's lure for high achievement in all that is beautiful and perfect.

"In the exhibition Leghorn every line bespeaks the 'Oval Curve', every section in the Standard implies this; long and nicely arched; well curved; nicely curved, etc., are the terms in abundance throughout the reading; even the ear-lobes are almond shaped; every curve merges into the other without a break from head to back; from back to tail; from neck to breast; from breast to stern and again to tail, thus creating an oval in entire profile. Taken in sections, still this law of the 'Oval' prevails; the nicely arched tapering neck presents an oval of itself as does the body complete; the same is apparent in the tail and in the moderately long and slender thighs. Then why the controversies? When science, art and harmony so clearly proclaims the truth. Destroy the oval curve in any one section and complete Leghorn type is destroyed. While the

drooping tail is a pernicious enemy to the oval curves, an increase of weights for Leghorns is far worse; the drooping tail destroys the oval curve by making a straight line from neck to tail and lengthens body beyond the oval, but the increase in weights coarsens the entire body in every line thereby eliminating the finer exquisite curves of the perfect oval so necessary in a high-class Leghorn. The increase in weights drops the breast and stern to an oblong with corners rounded; it causes the arch of the neck and the concave sweep of the back to assume almost straight lines and last but not least, shortens and broadens the moderately long and slender thighs into uncouth lines far removed from things of beauty and a joy forever."

Traveling Fast and Far.

Showing how an error travels when once it is started, Assistant Professor J. E. Dougherty says in February Reliable Poultry Journal, page 1522:

"According to Dr. Pearl of the Maine Experiment Station, who has been investigating for a number of years, the male transmits the character of high production only to the female offspring and the female to the male offspring."

"Therefore," Prof. Dougherty goes on to say, "we breed thus and so," showing that he trusts Dr. Pearl implicitly. Yet the real truth is now, has been for a thousand years, and will be a thousand years hence, that hens sometimes transmit the "character high production" to their daughters direct.

If Prof. Dougherty will put males of notoriously inferior laying stock with hens of notoriously superior laying stock, and report results, he will add value to his already very valuable work and writings. But there should be nothing slack and inconclusive about the trial. It will be easy enough to secure females that are thoroughbreds as regards good laying but to know that the stock the selected males are from, are, and long have been, confirmed in scanty laying, will very likely prove somewhat difficult.

Harvesting Greens.

When you have but few fowls and many acres, as may be the case when you are starting, then utilize foraging facilities to the utmost and be duly thankful for them. But in the long run do not rely too much on such facilities. Animal food, preferably buttermilk or skim milk, and greens, must both be "fed out" to them and the run be regarded as only a parade ground, or park, for air and exercise.

Where rainfall is abundant and fairly well distributed through the year, or where irrigation is feasible, blue grass and white clover, singly or mixed, or if too far south for these, Bermuda grass may in some cases be grown on the range and fowls allowed to help themselves. But prithee do not deceive yourself, good reader, as to this scheme. To raise any sort of vegetation for the fowls to harvest for themselves and have it tender and juicy always, is not so easy. It sounds well on paper but any sort of crop, no matter what, that is tender when it starts, soon becomes tough. To keep it tender you must have it stocked with a sufficiently large number of birds, and then there is risk of over pasturing. Either overstocking or understocking your range will be sure to bother you and in either case you are helpless. To hold the situation in hand always, and have your poultry have all they want all the time of quick-grown, tender, fresh vegetation, in shape to be swallowed easily, I know not, down to the present writing, of anything that beats artificial harvesting,—and grazing is not to be mentioned the same week. In fact, ordinarily, I would hardly mention it at all in this part of the world, unless in connection with the Skinner system of irrigation described in December issue of this magazine.

Close Calculations.

I have a letter from a stranger, who writes that it seems to him that it is "drawing it too fine to be so extremely particular about labor saving." Trouble is, I have not been particular enough. Poultry as a business is subject to the same natural laws as any other business is. Success in these latter days depends on being so "particular" that 'twill make your head snap.

Standard Oil folks are supposed to be no slouches when it comes to biz. But all the big businesses, too, are mighty particular. They even hire expert critics to look their establishments over and find all the fault they can, and in every department a notice is posted in big letters offering cash rewards of from five dollars to five hundred dollars to any employee, or any other man on earth who will vouchsafe a serviceable hint. I started to say how Standard Oil people particularize. They know to the one-hundredth part of a cent what a gallon of oil in a particular

BARRED ROCK COCKEREL HEADING FIRST PRIZE PEN
MADISON SQ GARDEN DEC 1913 BRED AND OWNED BY
PAYNE BROTHERS PORTLAND, CONN

tank has cost and the cost of a single barrel of oil on any railroad platform. The cost of the material in the barrel itself, wherever it was bought, including freight and drayage, and the infinitesimal bookkeeping and superintendence involved, cost of the contents at the part of the country where it was produced, involving all the stages of purchase, manufacture and transportation, even the cost of filling that barrel, and when shipped to a purchaser, the fraction of the shipping clerk's salary involved when he ships it and makes an entry is charged, as part of the cost of that particular barrelful.

The commercial world has been busy for several years over the question of whether horses or autos are the most economical. Standard Oil goes after it as follows: In a whole tier of big states the cost of keeping all their horses is accounted. Not in a general way but right down to a fraction. Not the cost of feeding a span or a stableful but a separate account is kept of the food of each individual

"Pullet—First, perfection back, well spread tail, graceful lines, strong hackle, beautiful staple." This was the brief but striking comment made in the January number and we are glad to herewith give our readers a likeness of this Brown Leghorn female which Judge Arthur Smith, after placing the awards, remarked had the best hackle and softest and best penciling, back and wings, absolutely free of shafting and brick, that he ever saw, with one exception, on a Brown Leghorn female. There were 170 Browns at this, the national club meeting—the largest exhibit of Browns ever cooped. Mr. H. V. Tormohlen has been making other important winnings at St. Louis, Birmingham, Cincinnati and Indianapolis beside Chicago. His address is Route 2, Portland, Ind.

horse and its proportion of tending, stabling, interest on value of the animal, death rate, depreciation by age, veterinarian fees, interest on vehicles and harness, plus their repairs and depreciation.

Driver's time in making trips is computed as a very important element. When a comprehensive average is secured there is something really known about animal service to be compared with results of equally minute details of cost of maintaining auto-van service.

Showing how careful experiments are to hasty conclusions, it was found that whereas it had been popularly believed that the advantage of the auto was greatest in case of a light runabout on a smooth road, it was just the other way. A heavy tank wagon on a bad road needing four big horses is a situation where the auto specially shines. A long trip with horses, demanding a full day, after rains, would need but three-fourths of a day, and driver would work a quarter of a day at something else. The command of extra reserve power all the time, at bad places, was equal to a pair of horses kept waiting to be hitched on at each bad spot. The extra fuel costs only when extra fuel is turned on, but an extra horse costs all the time.

Now, incidentally, it is worth noticing that the way the cost of horse service was found out shows not only that it pays to be extremely particular but also shows that the proper way was not to make everything turn on a few horses at a few localities but to go over a broad field. Our friends, the bloated money magnates, were desirous of knowing not what horses cost them at one town but what they cost at all towns, since at all towns was where they were using them.

Similarly, if the object of the great laying contests is to really learn the comparative laying merits of breeds, instead of filly fadling around trying to find out whether John Jones' particular squad of Blue Hopefull Senegambians lay better than Bill Smith's special bunch of Spangled Utopian Patagonians, single pullets of same age should be collected from many different owners in widely scattered localities and massed. For, keep in mind, it is in widely scattered localities that the birds of a chosen breed are to be procured and kept, by the people who are supposed to be benefited by the verdict of the trial.

I would not undervalue certain lessons, other than the comparative merits of breeds, that the contests are teaching, for these lessons fully repay all that the trials have cost. But the millions of people who earnestly ask for the breed that are the best layers are left stranded high and dry just where they were before.

Returning to the matter of careful statistics and the rigid saving of fractions of time, labor, light, fuel and materials, it is by the combined savings in all of these details that one great manufactory, or other industrial enterprise, makes so big a financial stroke that it forces all its competitors to adopt the same methods or quit business.

Respect the Preferences.

February issue of this magazine, page 235, gives instances where poultry keepers prevent, by their mode of feeding, that nice, leisurely determination by the fowls, of quantity of food which they need. Similarly, certain obstacles, sometimes apparently very trifling ones, will prevent perfect, nice, leisurely selection as regards kinds of food.

A striking instance of how an insignificant obstacle will stop fowls from eating as much of a particular kind of food as they otherwise would, is found in feeding wet mash, and affords an objection to it in addition to the one made by the universally admitted labor and inconvenience involved in its use.

Put wet mash before poultry and they will soon compress it into a compact mass till they are unable to peck and swallow it readily; and this inability keeps them from eating as much of it as they otherwise would. Whether or no this curious fact has ever been published before I know not. It is one of the little quirkums of which there are a hundred in poultry keeping, that seem at first glance extremely trifling but which are of considerable importance in practice.

You can put fairly moistened mash in a "container" and press it down carefully in different places, using a bit of board or anything with a flat surface and if you persevere it will become more solid than before through the mass, while it appears wonderfully wet compared with what it was, and on top there is a thin sheet of water, or milk or whatever.

Now, vary the method with another mess. Use a small implement sharpened at about the angle your lead pencil shows, and taking care to have the batch evenly spread, and not too thick, jab perseveringly at the mass and you will compact it much quicker and more closely than when you used the flat pressure. The birds' bills, wee chicks or big fowls considered, it makes no difference, have the lead pencil angle and there are such a great number of thrusts

that they will make a cake in a short time that is more solid than yours.

But why is it so hard for them to eat of compacted mash what they want, easily enough and fast enough to suit? For same reason, that your layers, or your young chicks, will never get as much as they ought to have by picking at whole, or halved, sweet potatoes, beets, turnips, mangles, kohl rabi, the hearts of cabbages or stems of rape. Any slight obstacle puts on a brake.

To prove that the foundation of the trouble is mechanical and not chemical or depending on taste or appetite, go to a flock that after eating the wet stuff a while have abandoned the mash box in disgust; break up the contents till it is in the same condition it was when first applied. Then go away and watch for what they will do.

Drive with a wagon over very loose, friable soil and a part will rise up when the wheel presses another part down, just as your flat implement operated. Drive repeatedly over a plot of soil, however loose, with a harrow, and after awhile the teeth will refuse to enter to amount to anything, and the harrow will travel on the tips of its toes to the amazement of the small boys. The soil compressor used in the Campbell system on thousands of farms in the arid districts has revolving discs with sharp edges and operates on the soil on same principles as bills of poultry do in the moist mash receptacle.

For about thirty years tamping ties on every railroad in the United States was done with a tool ending with a flat surface. But now the tamping tool is wedge-shaped on every road.

If any reader thinks that fowls are not as lazy as I have represented, when they have been given something which as regards its mechanical condition is different from what nature ever offered them, during the long ages while she was fashioning their beaks, to tongues, throats; then I ask him to observe with a field glass the behavior of all wild animals, birds or bipeds the same, and notice how persistently they will walk on smooth spots instead of stepping over even small obstacles, and how lazy all the movements are, hour after hour, of even such a bird as the ruffled grouse which when disturbed is all spring steel and boiled down lightning.

The additional time spent in dusting, when the material is easily accessible and soft as flour, compared with the time when the material is coarser is wonderful, and similarly, if the experiment is tried day after day, of loosening up a wet mash often, at a labor cost that of course makes the operation impracticable except for experimental purposes, the additional quantity eaten will be equally a matter of surprise.

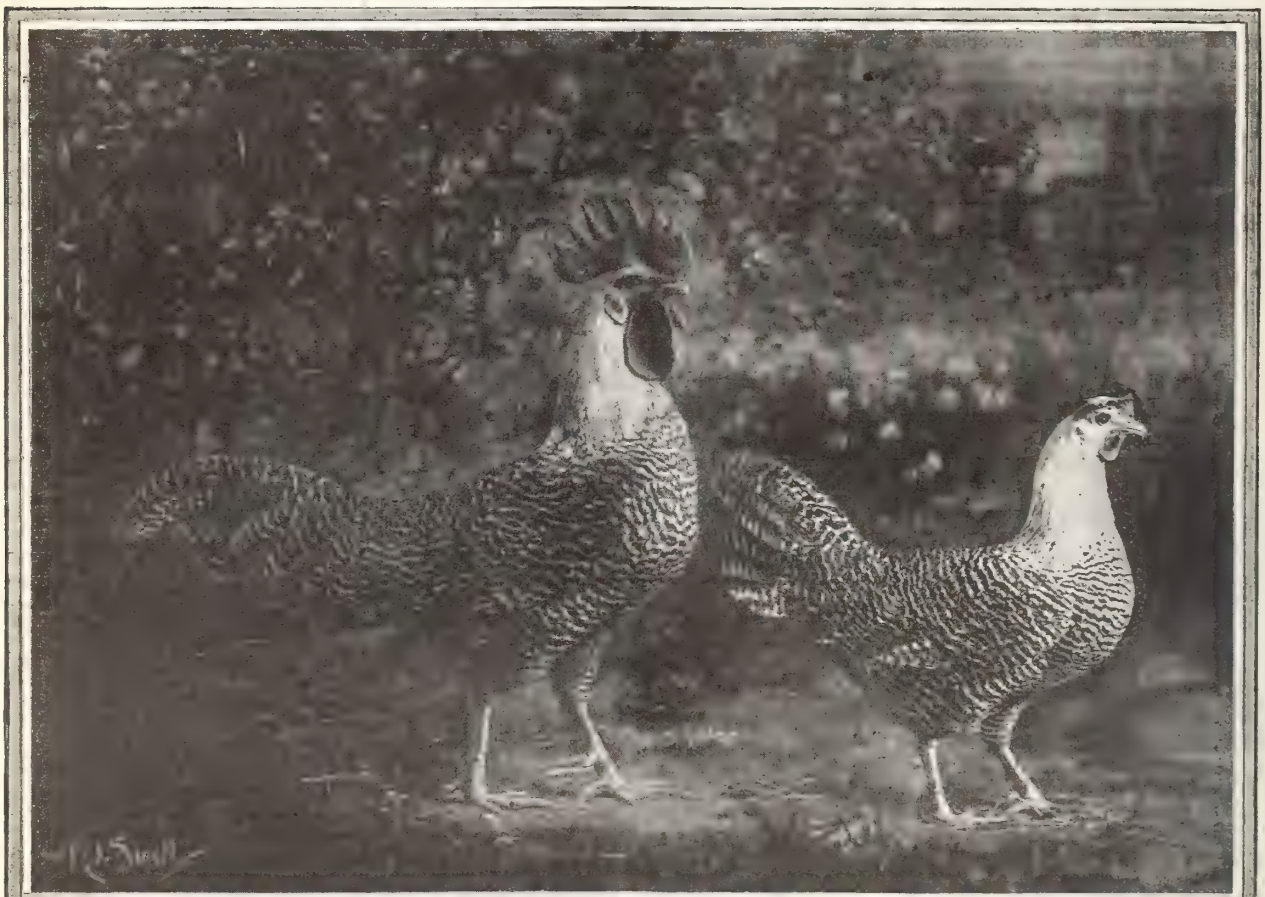
How to Grow Prize-Winners

A Large Amount of Scientific Knowledge Not Necessary—Blood Lines and Special Care Are What Count.

By Chas. A. Simmonds, Camp Point, Ill.

COMPETITION at the shows of national reputation is very keen in all the popular varieties, and the blue ribbon winners represent the greatest skill in mating and growing to produce the type desired. Most anyone can produce good poultry, but it takes a true fancier to produce the best. A large amount of scientific knowledge is not necessary, in fact, it is a hindrance where one follows it without regard to circumstances and the individual needs of his flock. If one has a love for the work and is willing to give his birds careful, painstaking care everyday in the year, he will soon succeed in seeing his birds win in the hottest competition. Too many poultry men are inclined to place great importance on having large numbers to select from. The Foxhurst Farm won all four firsts (as well as other prizes) in the single classes in Black Orpingtons at Madison Square Garden this season, and the proprietor stated that they never raised over 300 birds. Surely this is proof conclusive that blood lines and special care are what count. In many cases the first prize bird, and occasionally all fine birds, in a winning pen are produced from a single setting of eggs purchased from a mating of high-class individuals of the best blood and properly mated to produce prize-winners.

The securing of eggs from high-class, vigorous individuals, properly mated, is the first step in producing prize-winners, but many other steps must be taken before the blue ribbon is landed. The proper mating of any variety is quite a study, but the beginner who does not understand it can purchase eggs from a properly mated pen at a very low price, considering the possibilities they contain. "Rightly hatched is half raised"—a remark frequently heard, which shows that breeders regard proper incubation as highly important. Rightly hatched is just the way a good broody hen will do it; however, if you will procure the best incubators, you can, with a little experience, hatch fine chicks in them. The chicks should be brooded in small flocks, not that large flocks are not successful, for they are really the salvation of the commercial poultryman's success, but the chicks will be a little more comfortable and will develop into better birds if the flocks are small. Fifteen to twenty chicks to the hen, or fifty to each colony house, will give the best results, and the coops and houses should be quite a distance from each other. You can save steps in caring for the chicks by having the houses in rows, or in one large circular row. It always pays to provide a good range



for growing chicks, no matter how well you feed, you cannot entirely overcome the disadvantage of a poor range. An

ideal range is an orchard, berry patch, or cornfield, adjoining a field of clover or rape. The chicks can always find tender green leaves in the clover or rape, even when other vegetation is dry and tough.

With artificial brooding, do not attempt to use fireless brooders for the first week or two, at least, and then not unless the weather is sufficiently warm to allow you to keep the chicks comfortable without depriving them of plenty of fresh air. If you use hens for brooding you will have lice to contend with regardless of advice to the contrary. One should begin to fight lice when the hen is set, and for mature birds, any of the ointments advertised are much more effective and easier applied than the old fashioned powders which must be dusted all over the birds to be effective. Even though the mother hen is apparently free from lice, when the chicks hatch it is best to grease their heads with melted lard, to which has been added about 3 per cent carbolic acid. If you fail to do this you will discover head lice on them before they are a week old.

After this, it is best to dust each chick with lice powder every two weeks, till they are old enough to use the ointment. The roosting quarters of the growing chicks should always be watched for red mites; these they bring off the grass, and some seasons they are a continuous nuisance, at other seasons they are conspicuous by their absence. When you notice any on the roosts you can easily kill them by washing the roosts, dropping boards, etc., with a good disinfecting solution, however. Kerosene, to which has been added about 10 per cent zenoleum, or other good stock dip, will be much more lasting in effect, saturating the wood and making it an unhealthy place for mites for some time to come. One can save himself much work in fighting lice and cleaning houses by giving all stock, except chicks under eight weeks old, out-door roosting quarters during the warmest weather. The last two seasons I have had all stock older than eight weeks roosting outside, without even a roof over them, during July and August, and I find they are brighter colored, larger and more vigorous than when I used to let them roost in the houses these months. Early in the season when it is necessary to house the chicks, great care should be exercised not to let them crowd. Nothing will retard growth and reduce vitality like crowding and sweating at night. Provide roosts as soon as the chicks desire to use them. If you feed properly and use flat-topped perches, you need not fear crooked breast bones.

Plenty of shade is essential to the health of the chicks during hot weather, and is necessary to keep the plumage color from fading at all seasons. Shade is especially necessary in growing buff and red varieties, and those required to have a green sheen to their feathers, these varieties should be raised in orchard, woods or berry patch where there is an abundance of shade all over the range.

CHAMPION SILVER CAMPINE COCKEREL, FIRST AT N.Y. FAIR N.Y. CITY, ALLENTOWN, HAGERSTOWN AND FREDERICK, 1913
SILVER CAMPINE PULLET, FIRST AT N.Y. FAIR N.Y. CITY AND AT FREDERICK, MD., 1913 BOTH OWNED AND SHOWN BY
DR. J. H. PRUDHOMME, THURMONT, MARYLAND.

The question of proper feed for growing chicks is one which cannot be hastily disposed of, as it varies with the breed and the conditions under which the chicks are being raised. The proper ration is not so much a question of analysis as it is of digestibility. It is very necessary to give the food in an appetizing form and keep the chicks' appetites good. To do this one must feed a good variety. Mixing a large number of ingredients in the dry mash does not give the birds a variety, not any more than pancakes made from a flour prepared from four different kinds of grain would make four different dishes on the breakfast table. However, a large number of ingredients in the mash generally make it more palatable as well as easier digested.

The first three or four days I feed nothing but bread made

of cornmeal, eggs and some milk. I then begin feeding a chick feed made of two parts fine cracked corn, two parts cracked wheat and one part steel cut oats, scattering in the litter, if chicks are confined, if on range feeding from an automatic feeder. I continue to give two or three feeds a day of the bread till the chicks are four weeks old, when I substitute Blatchford's Milk Mash, keeping it in a hopper or box where they can eat it when ever they want it, or feeding once a day as a wet mash. I generally use the dry mash for early chicks that must be confined, and the wet mash for chicks on the range. With most mash feeds I would not want to begin feeding dry mash before the chicks were about eight weeks old, but Blatchford's mashes contain a cooked milk substitute which renders them more digestible and prevents bowel trouble. When the chicks are six weeks old they can take whole wheat, and at three months whole oats may be used in place of hulled oats. For whole grains, wheat, cracked corn, kafir corn and oats are excellent and may be fed liberally, most other grains should only be fed in small quantities. I prefer automatic feeders for the grain, as the feed is always kept dry and clean, yet the birds can get it whenever they want it. I have used common dry mash hoppers for feeding whole grain to chicks, but find it a wasteful method, also the chicks over eat when the grain is always in sight. With the automatic feeders the grain is always out of sight, and the birds must exercise a little to get it. They seem to eat just the proper amount to make the most rapid development. With hand feeding I get best results by feeding the grain morning and afternoon and giving the mash at noon. The wet mash is fed rather sparingly, as the chicks can obtain tender green stuff and insects to balance up the whole grains. During hot weather the chicks spend the greater part of the day in the shade, but will range out in the early morning and evening if not waiting for feed, so feed them early and do not keep them waiting. I feed a great deal of buttermilk in warm weather and find it a great conditioner, keeping the appetite good, preventing bowel trouble and is very rich in bone and muscle making elements. Sour skimmed milk is nearly as good. Milk should never be used when sweet, but should be fed fresh clabbered. Sour milk is easier digested than sweet and the lactic acid helps digest mineral elements in the feed and rids the system of injurious bacteria. I would not try to get along without a little buttermilk during the warmest weather no matter how high in price. When I can secure enough I give it to the chicks to drink, otherwise I use it to moisten the mash food. Some very successful breeders feed mash only twice a week, or not at all, to young chicks, but I find a light feed of mash once a day helps wonderfully in securing a good steady growth, especially when the weather is dry and hot. Of course, if one has a wide range, only a few chicks and the grass is green and fresh, they will not require mash, but when the weather is dry, insects are correspondingly scarce, and when clover or grass dries much of the nourishment is lost, turning to indigestible fibre. I have recently sown clover seed in the apple orchard and will fence it in with poultry netting. When I notice a prospective prize winner I will place it in this new yard where conditions are ideal and I can watch its development and give it the best of care. These birds will get stale bread, soaked in milk, table scraps and other tid-bits, too expensive to feed the main flock. Cared for in this way they will make a steady, rapid growth, will have brilliant colored plumage, be well proportioned, vigorous and not frightened by the appearance of strangers. About the only extra conditioning they will require will be a little coop training, and in the case of white fowls, washing before being placed on exhibition.

Starting a Mail Order Egg Farm

Developing a New Branch of Egg Farming—New-Laid Eggs Direct from Farm to Consumer by Parcel Post—Buying Public Still a Bit Slow to Take Advantage of Opportunity.

By Prince T. Woods, M. D.

EDUCATING the public is a slow and often difficult task, as many a poultry keeper has found to his cost. It takes time and real effort to change market conditions and to create a demand, even for a really superior quality article at a fair price. Most of us are decidedly "from Missouri" and have to be shown, and many of us have to be shown at the producer's expense, or, at least, at no cost to ourselves.

You can talk, preach and write for a long, long time, without convincing those you address, and unless you give them an actual demonstration that they can see and experience you won't convince many, and some "convinced against their will remain to be convicted still." Try it out on some friend you know pretty well. Choose a subject with which you are quite familiar and of which he is ignorant. Try to make your verbal demonstration concise and to the point, and note the results. Watch the blank look of incredulity grow on your friend's face. Note how he assumes a "what-you-givin'-us," "you-can't-stuff-me" expression, and after you're done talking you will find that, though he may not dispute you, he entertains grave doubts concerning your statements, has formed, or still holds to, his own conviction, or at all events you have not succeeded in convincing him so that it will last. All folks are queer but thee and me, and sometimes methinks thee may be a bit queer—and that's the way of human kind.

Some folks will spend perfectly good money for poor food and imagine themselves satisfied with their purchase, but that is because they don't know any better. Give them experience with a really superior article and watch their taste grow for the better quality. We once had a friend with whom we took noon-day lunch in a restaurant of well-known excellence for many weeks. During most of that time the entire gamut of the bill of fare, so far as he was concerned, was pea soup, corn-beef hash, baked beans and a cup custard. One day he confided to us that he didn't think much of the food in that eating house, and guessed he'd change to some other place; we persuaded him to dine there again and to let us do the ordering at our own expense, and we did. It was a long session and it opened up a new vista for him in the gastronomic line. We were in that restaurant a short time ago and met him—after twenty years he is still lunching there, believes it the best place ever, but his appreciation of the menu is more extensive and we believe that early practical demonstration of ours had much to do with his development. "There's none so blind as those who won't see." The public won't see quality in your goods until you show them; telling will help, but one good practical show down will have a more lasting effect.

A well-known public man once said: "There is one thing that tastes the same throughout the country, from the Atlantic to the Pacific, and that's an egg." He was quite a globe trotter, too. He either had no taste at all, or else was in the habit of consuming uniformly poor eggs. There is a wide difference in the quality of eggs, and in the taste of eggs. The saying, "Eggs is eggs," was born of dense ignorance of eggs.

The manner of keeping and feeding the hens, the kind and quality of the food, and the care of the eggs after they are laid, all affect the quality and taste of the eggs. We had city friends with us for the week-end several times this winter and on Sunday morning one of them said: "These eggs don't taste like the ones we get at home;

they're so good I don't know when I've had enough. Why is it?'' We replied that it was because of the food and care, as well as the new-laidness. In the conversation which followed it developed that our friend was paying 50 cents a dozen for strictly new-laid eggs from a near-by poultryman. The eggs were fresh, clean and full-meated, but all had an unpleasant taste when compared with our home product. Our friend took home all the eggs he could carry when he went back to the city, and later on wrote us that he had found out what was wrong with his poultryman's eggs: the hens were fed considerable swill and little or no green food. Now he has changed his source of supply and gets eggs of better quality.

Food Influences Quality of Eggs.

Food has a great deal of influence on the taste and quality of eggs, so does the health of the fowls. Tainted food and foods with strong odors will often spoil the taste of eggs. An abundance of green food helps to offset the effect of strong flavored foodstuffs and to improve the

quality of the eggs. The use of medicines in food or drinking water will often spoil the taste of eggs and may affect the color of the yolk. Eggs from hens affected with roupy colds, or with vent gleet, are almost certain to have a foul or fishy odor and taste. First quality eggs can only be had from healthy, well-kept, well-fed hens, and such eggs must be kept in a clean, cool place, away from all strong odors, if they are to keep their quality and good taste.

A few years ago a Massachusetts egg farm, selling all its eggs through a local dealer having a select private trade, made a radical change in the ration of the layers, introducing a quantity of cottonseed meal into the dry mash. The dealer had no knowledge of any change in the quality of the eggs and was surprised to have a number of his best customers complain of the taste of the eggs, and one of them also told him that she noticed, on poaching and frying the eggs, that there seemed to be an oily ring around the yolk and that the eggs did not taste right. He couldn't understand it and told her that she was getting strictly fresh eggs from the same farm she had always had them. She insisted that the eggs were different and said she would have no more of them and finally clinched her argument by cooking some sample eggs to show him the fault. The dealer saw the point and made a trip, post haste, to the farm to find out what could be wrong. The only change which had been made in the care of the layers was the use of cottonseed meal, and that was blamed for the trouble. The egg farmer cut out the cottonseed and returned to the old ration and there were no more complaints. That will serve as a practical illustration of the care which must be observed on an egg farm where quality eggs are to be produced.

There are a great many people to whom an egg is an egg, and who believes that if an egg is fresh laid that that fact alone means that the egg is of first quality. The only way that they will ever find out the difference in taste and quality of new laid eggs is by being shown. Give them a chance to compare the taste and flavor of real quality eggs with the sort to which they have been accustomed. There are a great many poultrymen who fail to understand that there is a wide difference between a well-made, well-fed fresh egg and a poorly-made, poorly-fed fresh egg. Every ripe orange isn't a good, sweet-flavored orange, as, no doubt, you have found out before this. Some oranges sell for 20 cents a dozen and are not worth any more than that, and some sell for 60 cents a dozen that are worth five times as much as the cheaper sort. Some new-laid eggs are dear at 20 cents a dozen, and some are cheap at 60 cents a dozen; it is a matter of purity, quality and good flavor. Make it a point to produce the big-value, best quality kind of new-laid eggs, and insist on getting a good price for good goods, but don't fail to make a practical demonstration of quality with samples of your product. To educate the public you must show them. To show them costs money, takes time and patience, as well as persistence.

Mail-Order Egg Farm.

The mail-order egg farms in a few years will supply first quality new laid eggs to thousands of city dwellers who now have to buy stale and inferior goods, but it is going to be up hill work getting such business started. Two years ago, J. G. McCarthy, started a mail-order egg farm business in Clifton, Illinois. He is handicapped by operating in what has always been a cheap egg country until recently. In such a location it will take longer to educate the buying public, but persistence and the pushing of best quality produce will eventually win. Mr. McCarthy had a man canvass the best residential district in Chicago and distribute about 3,000 circulars, advertising his egg farm, but did not receive an inquiry. We believe the circular should have accompanied a free sample of his quality eggs and that it might then have brought results. The circular is worth reproducing, here is the first page:

EVERY EGG SHELL DOES NOT CONTAIN AN EGG!

If you don't believe it don't read this circular

J. G. McCARTHY
Mail Order Egg Farm
Route 2 CLIFTON, ILL.

The remaining three pages of the circular contained the following:

''My Story''

''Your grocer sells you what he calls 'Fresh Eggs,' yet ninety per cent of them are from three to six weeks old or older. His source of supply is the grain farmer, on whose range you will find, ninety-nine times out of a hundred, wood water fountains that the hens drink from that contain typhoid and other dangerous germs—and nearly seventy per cent of an egg is water. You can imagine the results of eating such eggs, yet they have shells and look the same as the eggs from hens that are surrounded by every sanitary device and convenience.

"The above true statement is plenty of reason why you should think twice before you eat an egg, and three times before you buy what are represented to you as 'Fresh Eggs.'

"I am a poultry farmer and offer newly laid, guaranteed, infertile, fresh eggs, shipped direct to the consumer as needed, at little above what the city people pay for Mr. Grocer's so-called A-1 fresh eggs that are shipped in by the country shippers.

"The difference between the shipper's fresh eggs and the commercial egg farmer's eggs are: The country shippers gather eggs from a surrounding community of farmers as they see fit to bring in half a case which most times, in the winter months, takes two to six weeks; in fact, I know of some farmers, with poorly fed flocks, whom it has taken ten weeks to collect twelve dozen eggs, yet these were sold by Mr. Grocer as 'strictly fresh eggs.'

"The shipper has to hold these small collections until he has enough for a shipment, then he ships to the commission merchant, and he sometimes has them a week or more before sold to Mr. Grocer.

"Mr. Grocer now has 'strictly fresh eggs' direct from the country, six weeks old or older.

"You have bought the best you could up to the present time, but now I am making a clear way for you to get the best eggs produced.

"I book your order, gather your eggs, ship direct, no holding over, from here to the consumer. These eggs are produced by chickens with no cocks in the pens, where everything is clean, the fowls in fine condition, well fed with good, wholesome foods, a supply of fresh water always at hand, and not the taint of the dung pile.

"In extreme cases the flavor and odor of the feed have been imparted to the eggs, onions have been fed in sufficient quantity to bring about this effect. Feeds of high and objectionable flavor should not be fed by those who desire to produce a first-class article. Therefore, good goods cannot be cheaply produced.

"You also realize that it is more difficult to get fresh eggs in summer than in winter, because of the extreme heat and the broody hens sitting on them. This affects the eggs, and unless the farmer gives them his entire attention, gathers often and ships direct to the consumer, it cannot be a fresh egg on your table.

Prices

"I will ship, prepaid, twelve dozen of my guaranteed fresh eggs at fifty cents the dozen; or I will ship one or two dozen by parcel post at sixty cents the dozen. I will also contract for your year's supply of fresh eggs to be shipped as needed: Twelve dozen, express prepaid, at forty cents the dozen; parcel post, one or two dozen, fifty cents the dozen.

Terms

"Cash with order without exception, as this is the only way a business of this kind can be carried on without a loss. Yearly contracts can be paid a month, three or six months, or a year in advance, as desired.

"Remember, I pay the transportation charges.

"You may have some doubts in regard to my proposition. It will only cost you sixty cents to prove that what I say about my eggs is true, and just one trial is all I need to add you to my long list of permanent, satisfied customers.

"The quicker you let me have your order, the quicker your digestion will be relieved from swallowing shell contents full of germs. Leave it to me to take care of prompt shipments, that's my business."

Why Circular Did Not Bring Business.

The above quoted circular is interesting, but more so to a poultryman than to a prospective customer and consumer. It would have been better to omit most of the talk about germs. (We will have more to say about germs in eggs in another column.) Also, a good deal of the other "educational" matter might well have been left out of the circular and more attention given to telling that the Mail Order Farm had finest quality, finest flavored, guaranteed new laid eggs for sale direct to consumers from healthy fowls, well fed on wholesome foods and kept under modern sanitary conditions. Instead of directly "knocking" the "fresh eggs" of "Mr. Grocer," which it is assumed the family had been using for some time, it would have been better to boost the quality and excellence of the Mail Order Farm's product in an effort to induce Mr. Customer to try a sample and find out for himself how superior these new laid eggs direct from producer really were to anything he had had before.

However, that does not explain why the circular failed to draw inquiries. The fact is that the printed circular, unless unusually attractive, seldom gets much business. Most of them are thrown aside, unread, very few ever reach the prospective customer for a reading. Of the 3,000 circulars distributed in Chicago's residential district, it is doubtful if twenty-five of them ever reached the prospective customer for a reading and consideration. A personal letter would have had more appeal, but now-a-days, circular letters are more often waste-basketed than read.

Wealthy residents are difficult for the egg farmer to reach with an appeal for trial of his quality goods. Most

of them and most hotels and clubs buy through the cook or other agent. The agent buys where he gets a "rake off" or petty graft (politely known as a "commission") on all purchases. Of course, there are exceptions, but this is the rule. You have to get in touch with the cook or agent usually before you can supply the house with goods.

Then, too, the "wealthy classes" are not always the best buyers. Witness the opening of Chicago's municipal store, early in March, where groceries were to be supplied at cost to the needy poor and where wealthy and well-to-do persons (according to newspaper dispatches) fought and scrambled with the poor customers in an attempt to buy groceries at cost, until challenged by the clerks and refused supplies because they were unable to produce cards signed by the County Agent. As a rule "middle-class" folks are the best buyers and the best spenders.

How, then, is the mail order farm going to get business? One way is to get publicity by furnishing the newspapers with attractive writeups and photographs of the farm. Do a good deal of press agent work, and it is surprising how much the press will use about a poultry farm even though it does not advertise. Also carry a well-worded advertisement of your goods in some daily paper which reaches the people you wish to secure as customers. Look over the

ground well and select a likely district, make up a list from the directory, and canvass every householder by personal letter in an effort to get them to try your product and compare with what they are now using. Offer the sample at same price, for trial only, as they now pay and state why the goods are of superior quality, and the regular price in case they are sufficiently well pleased to wish to continue use of your product.

If the egg farm is on a well-used public highway or automobile road, prepare a good-sized bulletin blackboard, attractively prepared and placed to be read from the road, and on this advertise your goods, their quality and the prices daily. Once get an automobile trade established at the door of your farm and it will keep you busy supplying the demand. Study the market conditions and the buyers in your particular location and strive to get in touch with them to demonstrate the value of your goods and then work hard to hold your customers by fair and square dealing, honest prices, first quality goods, and always attractively packed. Honest goods at honest prices will advertise themselves, once you get them started, and pleased customers will bring you other customers. Pay more attention to producing and delivering the very finest quality produced and less to educating the public by talk or print, and soon you will find that your quality goods, attractively offered for sale, will educate customers for you and bring you new business.

Push and Pluck With Perseverance Will Win.

From our correspondence with Mr. McCarthy we believe he has the push, pluck and perseverance that are necessary in order to win in any new business enterprise. The mail order egg farm is a new thing, but it ought to develop wonderfully in the next few years. He writes us: "The mail order egg farm is like the mail order business houses of the large cities in their infant days; the public are very slow to grasp the opportunity of getting newly laid, well-fed eggs, or else they consider my prices extravagant ones for just eggs and they do not like to separate themselves from their money.

"I have strived for two years with little headway. It is not very encouraging, but I never intend to give up my endeavor to establish this mail order egg business. The parcel post egg shipping in one or two dozen boxes is a success as far as arriving in good condition at destination. Shipping a one dozen parcel post egg box to Chicago costs me 12 cents, covering all expenses. I intend to stick to this and to establish a mail order trade. In the mean time I have a good market for all of the eggs I produce, selling to large hotels, and my supply of eggs is below my orders.

"I consider that the first and most essential thing for the beginner with poultry is the American Poultry Journal. I have found it full of helpful information and a guide to the purchase of the best supplies. I have abundant confidence in my enterprise, but I do not feel that I have yet fully proved myself. If I win in this business I can safely say that American Poultry Journal has been the channel through which I sailed to success. When I have had more experience in developing this mail order egg farm business I hope to be able to tell you all about it and also the cost of producing and delivering a dozen eggs direct to the consumer."

Successful Method of Brooding Chicks

Much Depends on Quality of Stock Put Into the Brooder.

By Eugene Hodges

"FOR more than three years I've been raising white Leghorn pullets, and selling them at three months old for $8 per dozen," says J. M. Sutherland, of Sonoma county, California. "The way I used to do it, not over 75% to 80% of chicks would mature; but I've been experimenting and watching results and dissecting dead chickens until I think I know what I'm about now, as well as anybody. People think they are doing extra well if 80% of their chicks mature, but I raise 90% and more of all I put into the brooders."

Mr. Sutherland has no difficulty in disposing of all he raises. People come after them, wanting 1,000 or more at one time. One man recently wanted to contract for all he could raise at $7.50, but he could not supply the demand at $8 per dozen. The hardest part of his work is to get enough chickens to supply the demand at his door.

Here is the story in his own words:

"I have three brooder houses with a capacity of 6,000 chicks every ten weeks. For three years I bought day-old chicks from the hatcheries in town, but they did not give satisfaction, and now I hatch the eggs from my own flock at about a third of the cost and get stronger chicks. A great deal of success depends on the stock you put into the brooder. No egg from a pullet under a year old should ever be set. Such eggs hatch all right, but those that live after three weeks will be runty. Eggs should be selected for typical shape. Chicks from a round blunt egg will be 'sawed off' behind. Those from eggs with a humped up band around the shell are usually deformed.

"My own laying stock, all over a year old, furnishes all the eggs I hatch. I market every egg that is undersized, too large, or off shape. Twenty-one hundred and sixty are put at one time into my four incubators, and at least 1,500 hatch into good strong chicks. All the weak ones are killed on the spot to save feed.

"Enough eggs always test out to leave the front row next to the window empty. The metal strip they rest on is removed so that when the chicks are hatched they come

toward the light and drop into the nursery below. They should not be touched till they are dry. After the first 46 hours the babies are fed good, dry rolled oats for three days. They get as much every three hours, five times a day, as

they will clean up in 15 minutes. Then they get a dry mash, fed morning and noon, as much as they will eat. This is composed of equal parts of bran, shorts, granulated corn, charcoal, and meat scraps sifted through a fine sieve. Ordinary meat scraps contain a great deal of wool and long meat fibers. Unless these are removed they ball up inside the chick and death by fits is the result.

"Grits, shells, and ground green bone are kept by them all the time. In the evening before they get sleepy, they are fed a mixture principally of cracked corn and wheat with perhaps 5% millet seed, some hemp, and about 2% chopped flax seed.

"All this time after they are ten days old they are getting all the greens they will work for. I don't believe in cutting the greens because that bruises them and the bruised part soon gets bad. I hang up tender kale by a string so they can peck at it; and that way they eat much more.

"By drilling kale seed thickly in rows, I get the plants for food a month earlier. There are 300,000 plants in my unused chicken pen, four inches high by the middle of May. The kale is pulled as fast as they will eat it, leaving the plants at proper distances for future growth. Kale furnishes all the salt they need. Cabbage not quite so much. I used to add salt to the food, but not any more.

"This second period of feeding lasts until they are six weeks old. By that time they have passed the third critical period of their lives, their heads being feathered. The first critical period, when many die, is at five days of age. The second is at 15 days.

"The third feeding period continues until they are ready to sell at three months old. They are gradually worked out of the more expensive ground and cracked foods, into whole grain as fast as the stock will permit.

"I have never fed pepper or other dope; and never give medicine. My hospital is a stove where all the sick ones are burned before they have a chance to spread contagion.

"Fresh water has been supplied by dripping faucets and has been kept clean by a board cover to the trough, supported on lattice work.

"At about ten weeks they are transferred to other yards to make room for the next brood, which is the third hatched since they were.

"But the food is not the strongest point of my system. Pure air and regular heat evenly distributed throughout the hover are necessities to which ordinary brooder chicks are strangers.

"These are automatically supplied evenly to every part of my hovers. A boiler in a lean-to at the end of each brooder house is heated by a distillate oil burner. A pipe runs from the boiler into the building under the full length of the hover and back to the boiler. The hover is 24 feet long and three feet wide. The pipe runs through it six inches from one edge and returns six inches from the other, thus securing an even distribution of heat. A thermostat regulates the fire and an electric alarm gives warning if all other precautions should fail. In any event, the hot water would not allow the hover to cool off as suddenly as the hot air system.

"A separate pipe for fresh air opening from out doors expands into a jacket over the boiler and runs into the house under the full length of the middle of the hover about eight inches above the floor. The first third of the distance, there are two openings every foot of the pipe; the next third the holes are closer together and in the rest they are only four inches part, to compensate for the reduced pressure. When the boiler is hot, the air over it ascends into the hover pipe and out through the openings, continually supplying fresh, warm air to every part of the hover without making any draft on the chicks. No gas can possibly get from the stove into the brooder; and the characteristic foul smell of such buildings is entirely absent, due to the constant change of air."

John S. Martin, Port Dover, Ont., Can., has won an enviable reputation as a breeder of some of the choicest White Wyandottes in existence today. His strain possess an individuality truly Wyandotte in conformation. They are neither too coarse nor too fine in the various sections, but possess the refined qualities which have set the fashion in recent years. The cockerel in the above picture is a good example of a high class specimen, despite the fact that the picture was taken during the fall season, when most specimens lack full maturity.—A. O. Schilling.

Uncle Sam's Experiments with Poultry

Much Interesting Experimental Work Is Being Done at the Government Poultry Farm, Beltsville, Maryland, But Unlike Some State Stations, There Will Be No Undue Haste in Publishing Immature Results—Uncle Sam Intends to Know and Be Able to Prove Things Before Getting Into Print—Good Work!

By Prince T. Woods, M. D.

WE RECENTLY had an interesting interview with Harry M. Lamon, Senior Animal Husbandman in Poultry Investigations, Bureau of Animal Industry, United States Department of Agriculture. As we have said before, in these columns, he is one of the real "live wires" in government experimental poultry work, and is in charge of the National Government's Experimental Poultry Farm at Beltsville, Maryland, a suburb of Washington, D. C.

We called Mr. Lamon's attention to some of the spectacular publicity work being done by those in charge of some of our State Experimental Stations, especially some of the recent Sunday magazine stunts in newspaper syndicate write-ups. "Harry" grinned, but had nothing to say. Then we asked him for details about the work on the Government Farm. He said:

"I appreciate very much the interest you take in the work we are doing at the farm, and am only too glad to give you what detailed information I can, but you must remember that I do not feel that we should give out results of the work already done that might possibly be open to criticism."

That "listened good" to us, after the mad scramble for any old kind of publicity, half-baked bulletins and newspaper articles we had noted from some state poultry departments. We were glad to learn that Uncle Sam's poultry husbandrymen intend to know and be able to prove things first, instead of rushing into print with immature results. There is time enough to summarize and print conclusions based on experiments after the work is mature and has been in operation long enough to definitely prove something.

Mr. Lamon said: "At the present time we have nine pens, of thirty birds each, on different rations; some being mixed varieties, and others containing only one breed. The purpose of these experiments is to determine the cost of producing eggs, the average number of eggs produced by these flocks, the age at which the average flock becomes unprofitable, and considerable other information that will be of value to the average poultryman. Some of these pens are on free range, being handled and cared for as near the actual farm conditions as possible, while others are yarded and conditions made similar to those with which the suburban poultryman has to contend; some contain male birds for the purpose of determining what influence the male bird has, if any, on the egg yield.

"The rations which these birds receive contain grains that are available on nearly all farms of the country, or for which a substitute can readily be had, as it is our idea to determine as nearly as possible what results can be obtained with simple, inexpensive rations, rather than with the more expensive foods. So far the results obtained, I am sure, will be of considerable interest to the poultrymen of the country, but as these experiments have only been conducted a little over a year, we do not feel justified in making public the results at this time.

Photo No. 2—Chick-feeding frames in use on U. S. Government Poultry Farm, Beltsville, Maryland, to prevent older birds getting the food intended for the smaller chicks.

"In several pens in our long poultry houses, we have divided into groups of ten, eighty females that we are trapnesting and breeding to see whether or not they will transmit their egg-laying qualities to their offspring. This is a work that will take considerable time to secure definite results, but I believe one that will be of considerable value to the egg producers of the country. Of course, along with this egg-breeding work there are considerable other data that we are securing. These birds are being fed on very simple rations.

"For the past two years we have been carrying on special experiments in breeding for the purpose of determining, among other things, what influence in-breeding has upon the size, health, and egg-producing qualities of the resultant flock. It will be some time before these experiments are sufficiently mature to warrant publishing the results.

"We are also making a single mating of Barred Plymouth Rocks for the purpose of determining to what degree of excellence males and females of this breed can be secured from such mating.

"Then there are our pens from which we secure our breeding stock, composed of strictly Standard-bred specimens. These pens are made up of Barred Plymouth Rocks, White Plymouth Rocks, White Wyandottes, Rhode Island Reds, Buff Orpingtons, White Leghorns and Buff Leghorns. These special breeding pens are all made up of the best quality Standard-bred stock of some of the best blood in the country.

"In the spring careful records are kept of all work in incubation and brooding, both for artificial and natural methods. There is a whole lot to be learned about the successful handling of sitting hens, which, if known to the average farmer, would assist materially in increasing the output of poultry on the farms of the country. Our sole scheme in our work at the poultry farm is to conduct it along as practical lines as possible, so that when the results obtained are made public, they will be of value to anyone who is a producer of poultry and eggs in this country."

From this interview it is plain that Mr. Lamon and his able assistants have undertaken a big and good work in behalf of the poultry interests of the country and that our Uncle Sam intends to make his poultry experimental work thorough and worth while before making the results public. We are glad to be able to make this report of progress for the work on the government farm and we are glad, too, that the glamor of publicity held no inducements for Mr. Lamon to disclose to us for publication the results thus far obtained in the poultry experiments.

Photo No. 1—Colony house in use at U. S. Government Poultry Farm, Beltsville, Maryland.

Photo No. 3—A fine view of the woodland yards used for growing cockerels at U. S. Government Poultry Farm, Beltsville, Maryland.

The U. S. Government Poultry Farm at Beltsville, Maryland, is well located, contains some most attractive woodland for poultry growing, and has many other attractions besides poultry. With this article we present three interesting photographic views taken on Uncle Sam's poultry plant.

$7.16 Profit Per Hen in Laying Contest

Winning Pen Makes Above Less Cost of Labor. Poorest Hen Hardly Pays Cost of Feed. Missouri Pen of Buff Orpingtons Wins for February. Two Leading Hens Tie and Average 25 Eggs Each for Three Months. Hatch Early.

IF pullets are intended for an egg laying contest or are expected to be good winter layers, they must be hatched reasonably early. This applies to all varieties. If you can so arrange your hatches so the pullets will mature and begin to lay in October and November, they will continue throughout the winter as a rule. This has been our experience with our own stock and with those entered in the egg laying contests for the past three years. If your pullets are going to win or make a creditable record they must lay some winter eggs and if they don't begin to lay in October or November the chances are they will not lay much until towards spring. Some may, but the majority will not. If your pullets are to lay eggs in winter when eggs are highest, they must be hatched early. A pen that lays well in fall and winter will net you more profit than one that lays most of its eggs in spring and summer when eggs are cheapest. If you intend to enter any stock in a laying contest next fall, you had better hatch a few pullets at once if you have not already done so. This Experiment Station expects to hatch all of its chickens before April first, and hatched over 4,000 youngsters in January and February this year and the percent of mortality has been very low. One of the best Leghorn farms in this country never hatches anything after April 15th. If you intend to raise poultry, it behooves you to try to get all out of it that there is in it. If you are not equipped to hatch a few early chickens it will pay you to purchase a 120-egg or larger incubator and brooder. The best time to hatch Plymouth Rocks, Wyandottes, Orpingtons, Reds, Langshans, and similar varieties is in January, February, March and April. The best time for Leghorns, Anconas, Campines, and such varieties is March and April. This is especially true if you want to win at the fall fairs and shows, and expect many winter eggs.

A Missouri pen carried off the honors in the egg-laying contest this month. It was a Springfield, Mo., pen No. 32, Buff Orpingtons, and laid 205 eggs. The pen of White Leghorns from England still leads all others by 109 eggs. The highest individual record thus far has been made by a White Wyandotte from Pennsylvania and a Buff Rock from Missouri, each laying 74 eggs. The average for all hens for the entire three months is 29 eggs. The two leading hens have laid nearly three times as many eggs as the average hen in this contest and have laid as many eggs in the three winter months as the average Missouri farm hen lays in a whole year. The total number of eggs laid by the 1,040 hens this month was 12,391, which makes a grand total of 29,613 eggs for December, January and February.

In order that you may have some idea as to what the hens have done for the past three years, we give below their averages for this time:

Year	Dec.	Jan.	Feb.	Total Average
1911.....	8	5	10	23 eggs per hen
1912.....	8	10	12	30 eggs per hen
1913.....	7	10	12	29 eggs per hen

The low average of five eggs per hen in January, 1912, was caused by the unusually hard winter we had at that time. The reason the average was less in December, 1913, than in previous years was because of the fact that the last contest started in December and the hens were not accustomed to their quarters, change of feed, and climate. Some of the foreign birds did not arrive until late in the month. The average for January and February the last two years has been the same. If you can nearly double your flock and still keep up your average, you are making some progress.

Cost of Feeding Laying Hens

The hens in the last contest laid about twelve dozen eggs each on the average which, if sold for 25c per dozen, equals $3. The hens ate about 33 pounds of grain each and about 38 pounds of dry mash. The feed cost on the average about 2c per pound. This made the cost of feeding each hen approximately $1.42. This left a profit of $1.58 per hen to pay the expense of labor and other expense incurred. Twenty-five cents per dozen is a very conservative price to put on selected and guaranteed strictly fresh eggs. The best pen of hens laid 2,073, or an average per hen of 17¼ dozen, at 25c, equals $4.31, or at 50c per dozen would have equaled $8.62 per hen. Each of these hens ate $1.46 worth of feed, which left a profit of $2.85 at a low estimate, or a profit of $7.16 per hen if the eggs had sold at 50c per dozen. The poorest pen in the contest just laid enough eggs to pay for their feed and left nothing to apply on labor. There are many such hens in existence. One-half of the hens in existence are kept at a loss. How to make them profitable is the problem.

The best record made thus far by representatives from the different countries is as follows:

	Eggs
White Leghorns made best English record	610
Buff Orpingtons made best United States record	501
S. C. Reds made best Missouri record	466
White Leghorns made best New Zealand record	341
" " " " Vancouver Island record	322
" " " " British Columbia record	309
" Wyandottes made best Ontario record	301
" Leghorns made best Australian record	278
" " " " South African record	216

An unretouched photograph of a first prize Bronze Turkey hen at Madison Square Garden, 1913, showing the perfect bronze bands, penciling and snow white edging. Bred and exhibited by Bird Bros., of Meyersdale, Pa.

The poor showing made by some of the foreign pens is due entirely to the poor condition of the pens at the time they were received, caused by the hardship and length of

time in shipping and the severe changes in climatic conditions. One of the New Zealand pens had to be removed from the contest, and all suffered greatly. The same was true with the Australian and South African pens. It is only justice to them that we make this explanation.

National Egg Laying Contest.

The 600 hens in this section of the contest have made the highest average per hen thus far of any of the contests for the past three years. They laid 8,187 eggs and their average per hen for the three months was 33 eggs each.

The ten highest pens in this test are as follows:

Pen		Eggs
0	S. S. White Leghorns, England	610
36	Buff Orpingtons, Texas	501
47	S. C. Reds, Missouri	466
5	Anconas, Missouri	443
34	White Orpingtons, Ohio	434
1	Buff Leghorns, Missouri	433
38	White Orpingtons, Pennsylvania	429
24	White Wyandottes, England	421
55	Buff Plymouth Rocks, Pennsylvania	419
51	White Plymouth Rocks, Arkansas	409

White Wyandotte hen No. 181 from Pennsylvania was one egg ahead of Buff Rock hen No. 524 from Missouri last month. This month they tied with 74 eggs each to their credit or an average or nearly 25 eggs each for the first three months.

National Utility Contest.

The 160 hens in this test laid 1,908 eggs or an average of nearly 11 eggs per hen. These hens made a big gain this month over what they did in previous months. They laid more eggs in 28 days in February than they did in both December and January combined. The ten highest pens in this experiment are as follows:

Pen		Eggs
92	S. C. Reds, Pennsylvania	433
86	Barred Plymouth Rocks, Michigan	372
95	S. C. Reds, New Hampshire	293
85	Barred Plymouth Rocks, Texas	287
88	White Orpingtons, Kentucky	247
99	White Wyandottes, Arkansas	230
94	S. C. Reds, Ohio	230
90	White Orpingtons, Missouri	228
93	S. C. Reds, New York	225
89	White Orpingtons, Missouri	194

White Orpington hen No. 888 from Kentucky has laid 63 eggs and made highest record for this test. Hen 929, S. C. Red from Pennsylvania, is second with 61 eggs to her credit.

National S. C. White Leghorn Contest.

At the close of the month these hens were laying on the average about 50% production, or the 280 hens were laying about 140 eggs per day. At this rate they will lay nearly as many eggs in March as in the three previous months. The Leghorns have been a mystery. They have bright red combs, are active and happy, have consumed a lot of feed, but have never laid as they should. The same has been true with all Leghorns for the past three years during our winter months. The English pen has been the exception. Most of the Leghorns moulted this winter and four pens of foreign Leghorns were immature and just now ready to lay. We expect the Leghorns to lay from now on while the other larger breeds are broody. These hens laid 2,296 eggs in February, or an average of over 8 eggs per hen. The ten highest pens in this experiment are as follows:

Pen		Eggs
79	S. C. White Leghorns, Pennsylvania	414
70	" " " " Missouri	355
65	" " " " "	354
77	" " " " Vancouver Island	322
69	" " " " Kentucky	315
61	" " " " Nebraska	311
64	" " " " British Columbia	309
71	" " " " Missouri	290
67	" " " " "	258
80	" " " " "	250

The highest individual record in this experiment was made

First Hen Chicago Coliseum Show, December, 1913 Bred and Owned by Flanders' White Leghorn Farms, Orchard Lake, Mich.

by a Leghorn pullet, No. 702, from Missouri, and she has laid 59 eggs to date. Hen No. 611 from Nebraska is second with 58 eggs to her credit.

United States and Mexico, 1 year, $1.00; 3 years, $2.00.
10 cents a copy of all newsdealers.
Canada, 1 year, $1.25; 3 years, $2.75.
Foreign, 1 year, $1.50; 3 years, $3.50.

Look at the address on your wrapper. See that it is absolutely correct and notify us of any mistake, no matter how slight. Note the expiration date which appears thereon, as American Poultry Journal stops with the issue marked on your wrapper.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

VOTE FOR CHICAGO.

Chicago is making preparation to royally entertain the American Poultry Association next August and asks all the members to vote to hold the next annual convention in that city.

Foreign Eggs Should Be Labeled.

Several trade journals appear disposed to scoff at the efforts of California poultrymen to secure some protection against cheap foreign and particularly Chinese eggs.

One paper published in the interests of the packers, shippers and dealers does not believe that Chinese hens are kept under any more filthy conditions than are found on some farms in this country and pooh-poohs at the possibility of any eggs from China being contaminated with germs so long as the shells are whole. "Where ignorance is bliss, 'tis folly to be wise." Competent bacteriologists examining so-called fresh eggs have found dangerous micro-organisms in from 2% to 9.5% of the eggs examined. We shall be interested to learn what laboratory tests show as a result of investigating Chinese eggs.

The *Pacific Fanciers Monthly* says editorially that Chinese eggs cost an average of 8 cents a dozen in China; that they can be landed in California at a total cost of 14 cents a dozen; also that the eggs are not fresh and are from hens kept under the most revolting conditions. We quote the following from Mr. Harker's editorial:

"Wm. J. Bryan, in his world-wide travels, apparently had an opportunity to see what the Chinese hens ate and how they are kept, for he said that there was but one country in the world where he never called for eggs at his meals and that country was China."

Mr. Harker also says: "Importers should be compelled to stamp each and every egg 'laid in China,' and that would settle it, for most consumers."

In our March editorial on Chinese eggs, we said: "The sale of foreign eggs should only be permitted when the goods are duly labeled as to source of the importation and the date of same."

Many of our states now have a law requiring that all cold storage eggs shall be conspicuously labeled "cold storage eggs" as a protection for the innocent buyer and housewife. It is only reasonable to demand that all foreign eggs be conspicuously labeled as to source of the eggs and the age of same, for the same protection of the buyer. If this is not done our rapacious trade interests will be trying to palm off stale and possibly germ-laden Chinese eggs on the suffering public at fancy prices as a strictly fresh" article.

Trade journals are right that there are some farms in this country where sanitary conditions are not observed and where the fowls live in and feed on filth. We have seen fowls scratching on farm dung heaps, where such piles have been the only burying place of dead animals and human excrement; and any one who knows hens knows that they will gobble greedily all carrion and human excrement they can get. Fortunately such conditions in this country are becoming the exception and not the rule. In China we understand that sanitary and cleanly conditions of poultry keeping are the exception.

The modern egg farmer of the United States, with a modern sanitary, cleanly plant; healthy hens fed on wholesome food and cared for under wholesome surroundings, should not be obliged to compete without protection against the eggs from ill-kept, filth-fed flocks or with eggs imported from foreign lands. Foreign eggs should be labeled.

Milk and cattle inspection started a howl of protest from dealers all over the country when first attempted, but conditions are improving and inspection is becoming more thorough and less of a farce. Inspection of eggs and poultry is quite as important and it is coming; so is inspection of poultry plants likely soon to follow the present inspection of barns and stables. We insist on our American producers conducting sanitary plants and likewise we should insist that they be protected against cheap foreign competition where sanitary conditions are a minus quantity.

Demand that all eggs imported from foreign countries be duly labeled and also insist that "cold storage" eggs be labeled so that every customer will know what he buys. It is too late to keep out the foreign egg, but it isn't too late to label it.

San Francisco advises state that the ocean freight rates on eggs from Chinese ports to that city are 22¼ cents per case without refrigeration and 44½ cents per 30 dozen case with refrigeration; also that fillers and cases for these eggs cost about one cent per dozen eggs. If it is true that the eggs in the Orient can be had at 8 cents a dozen it would seem that Mr. Harker's estimate of 14 cents a dozen cost of Chinese eggs laid down in California was a conservative one.

Favoring the Chinese Egg.

At the spring meeting of the Missouri Association of Wholesale Dealers in Eggs, Butter and Poultry at Kansas City, the first week in March, John Stewart, of San Francisco, gave a talk on "Effect of Importation of Foreign Eggs and Butter on the Pacific Coast." The address was lengthy and aroused a great deal of interest. The speaker disclaimed any personal interest in the imports considered and he presented numerous points in favor of Chinese eggs. The following excerpts are made in brief from his address:

Shanghai is the receiving point for eggs. At the warehouses there they are candled and packed. The eggs are received in native baskets of 1,000 eggs each. The source of supply is the sur-

rounding country for some three days journey and also in Malay and Straits Settlements. Shanghai has only one cold storage warehouse.

The "flush season" for Chinese eggs is in October, November and December. Chinese fowls are mostly of the "Mediterranean breeds and smaller than ours." (Please note this and the following statement.—Ed.) Chinese eggs were exhibited at this meeting, were small average size, fair appearance and had thick brown shells.

Flavor of Chinese eggs is good, though some are off flavor. They stand up well, are full and of good body.

Chinese eggs are capable of withstanding heat with less ill effects than American eggs. (Wonder why. Is it because they cost less? Ed. A. P. J.).

Eight thousand cases of Chinese eggs were laid down in San Francisco at a total cost of 13½ cents a dozen.

Mr. Block, a wealthy egg exporter in China, was quoted as claiming that he could put good Chinese eggs into San Francisco market at a cost of 10 cents a dozen.

Mr. Stewart had heard a guarantee to deliver Chinese eggs next November to January, up to 50,000 cases (1,500,000 dozen) at 17 cents a dozen f. o. b. San Francisco.

The wages of "egg breakers" in China equal 5 to 7½ cents a day and 5 cents a dozen is a high price for eggs.

Last winter most Chinese eggs in California sold to bakers. Mr. Stewart said that the hotels, grocers, etc., wanted Petaluma, California eggs, which are "the finest eggs on earth, running 56 to 62 pounds to the case and all white and clean."

Most Chinese eggs and poultry now go to Germany and Great Britain. Egg production in China is considerable and likely to increase fast, as the outlet increases.

Mr. Stewart does not believe that Chinese hens are scavengers or that they eat filth. They are fed on good food like rice, barley and corn and are most exemplary in conduct and habits. (So, apparently, we should believe that the hens in China live better than the people and, presumably, are in many ways superior to American hens, aside from the fact that they can produce eggs at a profit at 5 cents a dozen.—Ed. A. P. J.)

There are twenty factories in China engaged in the business of putting up egg albumen and egg yolk. (An American print manufacturer and importer of egg albumen, for use in his factories, told us some time ago that Chinese egg albumen was so filthy that he was obliged to stop using it and to find a substitute mordant for fixing colors in his prints.—Ed. A. P. J.).

Exporter Block went to China 14 years ago and has made a fortune in Chinese eggs. Chinese eggs withstand heat. Last summer, owing to the heat not over 30% of the Kansas and Missouri summer eggs were merchantable. (Wish someone would explain why age and heat fails to affect a Chinese egg same as an American egg. Do Chinese hens use preservatives and asbestos insulators? —Ed. A. P. J.).

There are five steamers a week sailing from Shanghai, China, to Pacific Coast ports, including Vancouver, Seattle and San Francisco. The average running time between Shanghai and San Francisco is 28 days.

Prejudice will not prevent the importation and sale of Chinese eggs if relative values are profitable.

(In other words, if there is profit, big profit, to be made in importing Chinese eggs there will be big importations and a lot of them will undoubtedly be sold as domestic eggs unless the law compels labeling all eggs to indicate where laid. Not one Chinese egg in a million will be less than five weeks old when it lands at an American port and many of them will be three months old and older. But, judging from the information received, they are not seriously affected by heat and may improve with age; if you possess a taste for a "gamey" flavor.—Ed. A. P. J.).

Opening the Panama Canal will probably cut freight rates from San Francisco to New York. Direct steamers may be established from Shanghai to New York, opening up the Atlantic Coast ports to Chinese egg trade. (Lovely! Isn't it most time for us to begin trying to shave our heads and grow our scalp lock in a pigtail. We'll admit prejudice, we never even eat chop-suey or polished rice.—Ed. A. P. J.).

$50-Fifty Dollars in Cash Prizes-$50

Great Prize Contest for 1914 Chick Growers Open to Everybody—Starts Now—Enter Your Name Today

American Poultry Journal offers *Ten Cash Prizes*, aggregating *Fifty Dollars*, in a *Great Chick Growing Contest for 1914*. The contest is open to *Everybody* who grows chickens. There is no entry fee. If you wish to compete simply send in your name today to the Managing Editor of American Poultry Journal, Silver Lake, Mass., saying: "I wish to enter the A. P. J. Chick Growing Contest for 1914." Read carefully the rules of the contest.

$50.00 IN TEN CASH PRIZES

FIRST PRIZE	*$15.00*
SECOND PRIZE	*10.00*
THIRD PRIZE	*7.00*
FOURTH PRIZE	*5.00*
FIFTH PRIZE	*3.00*
SIXTH PRIZE	*2.00*
SEVENTH PRIZE	*2.00*
EIGHT PRIZE	*2.00*
NINTH PRIZE	*2.00*
TENTH PRIZE	*2.00*

Rules of Chick Growing Contest.

The contest starts now; chick season of 1914. It is open to anyone who grows chickens this season, and variety of Standard-bred poultry.

Every contestant must write the story of his or her chick growing experience for the season of 1914, describing hatching, brooding, feeding, care and management of the chicks. This article should contain not less than 1,000 words nor more than 1,500 words.

With each article there must also be furnished FIVE PHOTOGRAPHS of the growing chicks at ages mentioned below. The photographic prints should be clear, sharp and distinct and should not be mounted. The photographs must be made of chicks grown by the contestant and all five for the same variety of poultry. With each photograph must be given the average weight of individual chicks at time photograph was taken. Only chicks of the same age must be included in the same photo. Arrangement and grouping of chicks is left entirely to contestant. The photos should be taken of chicks at different ages as follows:

Photo No. 1. Day-old chicks.
Photo No. 2. Chicks two weeks old.
Photo No. 3. Chicks four weeks old.
Photo No. 4. Chicks eight week old.
Photo No. 5. Chicks three months old.

Remember to write your name and address in pencil on the back of each photo print, the name of the variety, the age of the chicks in photo and the average weight per chick. These rules must be carefully followed. Do not write on the face of photograph.

The contest will close September 1, 1914, and all photos and articles must be in the hands of the Managing Editor of American Poultry Journal, Lock Box 4, Silver Lake, Mass., not later than September 15th.

All photos and articles submitted become the property of American Poultry Journal. The judges reserve the right to reject any or all articles and photos not deemed worthy of a place.

Prizes will be awarded ON PRACTICAL MERIT of the chick growing method reported, the RESULTS WITH THE CHICKS, and the QUALITY OF THE PHOTOGRAPHS, including EFFECTIVE GROUPING OF CHICKS.

We require that all articles be written on one side of the paper only and neatly prepared. Literary style will "cut no ice." The PRACTICAL VALUE of your story as an EXPERIENCE LESSON is what counts. Don't be afraid to enter because you have never written an article for publication. Simply tell your experience just as you would write a letter about it to a friend whom you wanted to help to be successful with chickens. Tell your story plainly, forcefully, briefly and stop when you are done. Prepare

for writing the article by making notes of your experience as you grow the chicks this season.

Don't fail to enter this contest; it will help you, help your variety and help others who are beginning with poultry.

Awards will be announced as early as possible after the close of the contest and the Cash Prizes will be paid in time to furnish you with Christmas money. Winning articles will be published. Be sure to read the rules carefully and to save them for reference. Enter the contest today. Do it now.

Germs in Eggs.

We do not believe in being foolishly alarmed about disease germs in eggs or anywhere else. We have to meet pathogenic micro-organisms everywhere and it doesn't do any good to be afraid. It is evident that they are not always as dangerous or deadly as many folks suppose them to be, otherwise the human race would not have existed until the present time. Nevertheless, while we may not and should not fear, there is no reason why we should remain ignorant of and blind to the everyday facts. We know that certain microbes, under conditions favorable to the germs, do become dangerous and a menace to human life. So, though we may not fear, and while greed to fatten the pocketbook may influence the vision of some, why remain blind to the facts and why run needless risks?

Competent observers have proved that we lose millions of dollars' worth of eggs annually in this country through filthy conditions, bad management and bad handling. Many able men and women are working hard to secure better conditions of poultry keeping and better handling and marketing of poultry produce. We ask our poultry keepers to observe modern sanitary methods, to keep coops, nests and yards clean, to feed only wholesome foods to fowls, to supply pure water, to keep only healthy young stock birds, and to observe care and cleanliness in gathering the eggs, to gather and market them often. We insist that the eggs must be kept in a cool clean place and not exposed to dampness or foul odors, and we demand clean, fresh-gathered, new-laid eggs for our own table and claim that the fresher an egg is when eaten the better it is. Such fresh-gathered new-laid eggs bring the highest prices.

Nowadays most of us are strong for pure foodstuffs, we want purer, better and cleaner foods, and have enlisted the Federal Government's and State Government's services at considerable expense to help us to secure pure foods. It doesn't do any good to be careful in one particular and lax to the point of imbecility in others. If it is worth while to clean up our domestic foodstuffs and insist on cleanly conditions of production in this country, it is certainly equally, if not more, important to investigate the sources of foreign food products and insist that they be labeled according to quality and purity.

It is a notorious fact that shippers and dealers now get a wide range of "quality" and many "grades" out of the same case of eggs. Misrepresentation by dealers has made the term "strictly fresh eggs" a joke and byword. It is high time we had a cleanup in our market conditions. We are in full sympathy with the Californians who seek some protection from the great influx of cheap, doubtful quality foreign eggs and who ask that such imported eggs be duly labeled "laid in China," or wherever they may have been laid. We believe that all eggs, no matter what the source should be labeled according to age and quality. Today we are getting more Chinese eggs imported monthly than were received during the whole year of 1913. Pacific Coast poultry keepers, being "next door" to the Orient, have to bear the brunt of the invasion; they are working to produce "pure food eggs" under modern sanitary conditions and we don't wonder that they protest against the unrestricted sale of unlabeled, doubtful-quality foreign eggs that are arriving by the millions of dozens. We don't want to see private pocketbooks fattened at the expense of the public health; if we are to have pure food laws, for goodness sake make them broad enough to cover both foreign and domestic products.

We quote the following extracts from a February editorial in the New York Produce Review which shows a surprising lack of information concerning eggs and their contents:

> The California poultry interests are up in arms against the Chinese egg. They are making two lines of principal attack: one is to seek exclusion of the foreign product on the ground of unwholesomeness, and to that end samples are being submitted to the health authorities in the hope (shall we say it?) that the eggs may be found, in some mysterious way, bearers of disease germs; the other is to create in the minds of consumers the belief that Chinese eggs are filthy; to that end a circular has been published declaring that the Chinese feed their chickens on excrements and offal and and keep them in filthy surroundings, and an appeal is made also to the patriotism of the people of California to refuse the imported eggs and stick to the native product.

BUFF ORPINGTONS
Fashion Plate Strain

Our Standard bred models are in demand in every State and eleven years of trap-nesting goes with every purchase.

100 nicely finished cockerels yet in our surplus yards at $5.00, $10.00, $15.00, $20.00 or $25.00 each. Select your bird and we will fit the quality to your price and give 125 cents in value for every dollar you remit.

200 pullets budding into laying and **50** yearling hens, all raised from our best families of trap-nested layers, going out at $2.50, $3.00, $4.00 and $5.00 each—all pairs, trios or breeding pens mated in the correct blood lines to give **best** results in chicks.

See the 1914 **Orpington Fashion Plate Book**, study the description of our 28 yards and the price of eggs, Fashion Plate Buffs in natural colors, over 40 other illustrations, 56 pages. **FREE.**

A. E. MARTZ & SON **Buff Orpington Specialists** **Box A, ARCADIA, IND.**

One can hardly believe that eggs brought from China in the shell will be found to be contaminated with the germs of disease, though they may be of average inferior quality; and while a prejudice against them may result from such description of Chinese poultry keeping methods as above mentioned, it will be remembered by most people that our own farm poultry are often occupants of the dung heap.

To anyone at all familiar with fowls and eggs, and particularly the anatomy of fowls, the functioning of the egg organs and the structure of the egg itself, there doesn't seem to be anything particularly mysterious about the possible microbic invasion of eggs. It is not uncommon to find foreign matter in new-laid eggs. A number of competent investigators have found parasitic worms and vegetable parasites in eggs, though the eggs were fresh and the shells intact. A fluke, a nematode, and fragments of tapeworms have been recorded as found in fowl's eggs. Bonnet found the ova of a fluke in the albumen of an egg in 1880. Foreign investigators have found no less than nine varieties of vegetable parasites in the albumen of eggs. That the presence of these objectionable "guests" is a matter of accident and abnormal condition of the egg organs, does not make the invasion any the less real and undesirable. There isn't any mystery about it.

C. F. Langworthy in U. S. Farmer's Bulletin No. 128 (1905) states:

It is possible for an egg to become infected with micro-organisms, either before it is laid or after. The shell is porous, and offers no greater resistance to micro-organisms which cause disease than it does to those which cause the egg to spoil or rot. When the infected egg is eaten raw the micro-organisms, if present, are communicated to man and may cause disease. If an egg remains in a dirty nest, defiled with the micro-organisms which cause typhoid fever, carried there on the hen's feet or feathers, it is not strange if some of these bacteria occasionally penetrate the shell and the egg thus becomes a possible source of infection. Perhaps one of the most common troubles due to bacterial infection of eggs is the more or less serious illness sometimes caused by eating those which are "stale." This often resembles ptomaine poisoning, which is caused, not by the micro-organisms themselves, but by the poisonous products which they elaborate from materials on which they grow.

It is a fact that hens will live, grow fat and lay eggs on a diet of swill and the food found in the excrement of humans and animals; just as hogs are sometimes grown on swill and the undigested grain food voided in the dung of cattle. We don't believe that that sort of pork and eggs can be included in pure and wholesome food and the mere thought of it is revolting to the human mind and stomach. We know that filthy conditions of poultry keeping are found on some of our American farms and strenuous efforts are being made to clean them up. Travelers in the Orient tell us that filthy methods, foul coops, dirty nests and filth-feeding are common and prevalent in the Far East, and we can't hope to get a clean up there for a long time. We hope our health authorities will make thorough laboratory tests of foreign eggs with a view to finding out to what extent they may be infected with undesirable germs and that our pure food laws will require all eggs to be labeled as to quality, source and age.

Storrs Agricultural Experiment Station, Connecticut, has recently published a bulletin (No. 75) by Dr. Leo F. Rettger, entiled: "The Bacteriology of the Hen's Egg with Special Reference to Its Freedom from Microbic Invasion." This is an excellent bulletin and well worth reading. Its title has mislead some readers into the belief that Dr. Rettger's investigations prove that eggs are, as a rule, remarkably free from bacteria. A careful reading of the reports does not lead to that conclusion, since in tests from 1910 to 1913, inclusive, with thousands of fresh eggs, from about as low as 2 per cent to as high as 31.7 per cent of the eggs tested were found to contain bacteria. Of 3,510 fresh eggs, of which the entire yolks were tested, from July, 1910, to September, 1912, 9.5 per cent contained micro-organisms, not including the germ of white diarrhoea. Nearly 10 per cent microbic invasion of good, selected, fresh eggs can scarcely be considered being remarkably free from bacteria.

Six hundred and forty-seven fresh egg yolks were tested in April, May and June, 1913, and 3.86 per cent of them were found to contain germs, not including white diarrhoea. When eggs were found to contain the B. pullorum, the specific germ of white diarrhoea, they were seldom found to harbor any other organism. The whites of 582 eggs were tested in 1913 and only 1.2 per cent were infected with bacteria.

In mentioning the quality of the eggs used in tests Dr. Rettger said:

Most of the eggs came from college and station stock. Shipments were received, however, from numerous sources, and from different parts of the country. The Storrs eggs were collected from trap-nests. As a rule, only clean and apparently normal eggs were used in the tests, especially in the examination of fresh eggs.

It is interesting to note that these eggs, which were found to be comparatively free from dangerous disease germs, were what would be considered, as a rule, good, fresh, new-laid eggs produced under

Beauty and Utility White Wyandottes

There is no branch of the poultry business that has received more abuse than that of selling eggs for hatching. That there are just grounds for a good deal of this, is also a fact. There are breeders selling eggs for hatching from weak debilitated stock. Their birds may possibly have show room records but it would be simply impossible to hatch strong, livable chicks from them. You cannot get something from nothing.

Regal White Wyandottes have a magnificent show record and this record was made by birds that have the vigor and stamina to reproduce themselves. For the past nine years in succession, I have bred, raised and exhibited the first prize cockerel at the New York State Fair. These winnings are not accidental but prove that my line of breeding is correct. **Think this over.** When you buy eggs for hatching from my pens you get them from birds that are bred right, raised right and correctly mated. Can you not reasonably expect better success by starting with an established strain. If you are not satisfied with the results you are getting why not start all over with pure Regal Strain? Note what one customer says:

Crusader III, a Boston Winner

Conneaut, Ohio, Dec. 12, 1913.

Dear Sir:
I received the two settings of eggs in good shape and hatched 16 fine chicks. Of the 16, I raised 15, one being killed by accident. I have six fine pullets and four cockerels that $10 each would not buy. They are beauties. I am more than satisfied with my deal, and thank you for fair treatment. Will want more eggs. Yours truly,
J. J. BOURQUIN.

Another customer, Mr. F. O. James, of South Portland, Me., says: "I can honestly say that all the chicks hatched from your eggs were the hardiest and most rapid growers I have ever handled in fifteen years."

Exhibition Matings (as they run), $5 per 15, $9 per 30, $12 per 45, $24 per 100. Pens 5 to 12 are special matings. Eggs from special matings only, $10 per 14, $18 per 30, $25 per 45, $50 per 100.

Record Laying Pens (Dorcas Line)

Pens 21 to 26 are headed by males bred from females with high records. Some of these males have exhibition records. The females in the six pens are yearlings with trap-nest records from 180 to 224, and pullets of the same breeding. From these pens eggs are $5 per 15, $15 per 50, $27 per 100, $50 per 200. Utility matings of vigorous surplus stock are $9 per 100, $17 per 200, $25 per 300.

Special—50 big, vigorous, matured cockerels, $5, $10, $15, $20 and $25. Also about a dozen fine trios and pens properly mated for quick sale.

Free—20-page illustrated catalogue and mating list. It gives full description of my matings for 1914.

John S. Martin : Box 51 : Port Dover, Canada

cleanly conditions. Dr. Rettger is disposed to believe that there may have been accidental invasion of the eggs during some of the tests and that the percentage of actually infected eggs was really lower than is shown by the tests. We wonder what the results would have been had the tests been made with the average run of stale market eggs or with eggs imported from the Orient. A considerable variety of organisms were found but no attempt was made to make a thorough classification.

Of artificially incubated eggs incubated one week, 1,746 were tested in three years and only 2.75 per cent found to be infested with germs other than white diarrhoea. Of 2,166 eggs incubated two weeks, only 1.3 per cent were found infested with germs other than those of white diarrhoea. Of 1,984 eggs incubated three weeks, 3.6 per cent were found to contain bacteria, not including white diarrhoea.

The tests with incubated eggs are in keeping with the experience of many poultrymen who have found that infertile eggs tested out of an incubator, after a week's incubation, are almost always edible, free from odor or taste, keep well and are apparently sweet and good for food, though the whites are a bit thinner than normal; apparently such eggs are comparatively free from micro-organisms. On the contrary, eggs taken from the nests of broody hens after seven days or more incubation, though they may be infertile, are invariably spoiled and offensive. This would seem to indicate that the eggs become invaded with germs while in the hen's nest.

The bulletin states: "It should be borne in mind that the results given in this paper were obtained in the examination of eggs which were clean and free from defects in the shells, and which were gathered, as a rule, from trap-nests. The incubated eggs were incubated in standard artificial incubators."

Dr. Rettger says that the data from his tests are not in harmony with those of many other investigators and cites some examples which we quote:

In Lamson's publication we are led to infer that in a large proportion of fresh eggs which were examined under his direction bacteria were found. Eggs laid in July, August and early September contained a greater number of bacteria than April, May and June eggs. According to him, eggs may be infected by bacteria both in the oviduct, before laying, and through the pores and defects in the shell after the egg is laid.

In the investigation reported by Miss Pennington only 7 out of 57 so-called fresh eggs were found to be sterile. In 18 of the experiments the yolk had the larger number of micro-organisms, while in 11 instances the majority were in the white. In 21 the numbers of yolk and white were almost even. Thirty different species were isolated from 100 eggs.

Poppe found bacteria in 54 per cent of the eggs which were tested by him.

In the extensive investigation of Maurer 18.1 per cent of the total number of eggs that were tested yielded positive results when the culture tests were made at room temperature, while 8.3 per cent showed growth at blood temperature. Of the infected eggs 82 per cent were infected in the yolk, 25.9 per cent in the white, and 7.9 per cent in both white and yolk.

Other competent observers have shown that a large proportion of eggs marketed under the common methods of gathering, collection, handling and shipping, are spoiled and rendered unfit for food. Investigators have shown that the germs of typhoid fever and of Asiatic cholera may invade eggs if conditions are favorable. Other dangerous micro-organisms may gain entrance to eggs, either before or after they are laid, when the conditions under which the eggs are produced and handled are filthy.

Dr. Rettger's admirable bulletin points out that:

As long as the shells of eggs are kept clean and dry there is little danger from bacterial invasion. The soiling of shells, especially with fecal matter, lowers the chances of preservation of the contents. Eggs that are soiled are no longer germ proof. Furthermore eggs which are kept in damp places are apt to spoil, as the moisture that collects on them destroys or weakens the protective coating, and enables bacteria to work their way into the interior.

The shell of a fresh egg is coated with a thin layer of gelatinous substance which under normal conditions protects the egg from bacterial invasion. * * * Under the influence of moisture the shell is deprived of its gelatinous covering, and bacteria can, as a result, easily pass through the porous parts of the shell.

Egg-white has strong antiseptic qualities, and in many cases a marked disinfectant action on bacteria.

The oviduct of a normal healthy hen is sterile and the secretions exert a very important influence for the preservation of the eggs against bacterial invasion.

It is reasonable to assume that where the hens are healthy and kept under sanitary and cleanly conditions, fed on wholesome food, given clean nests, eggs gathered soon after being laid, and kept clean and free from contamination, that such eggs will, as a rule, be comparatively free from bacterial invasion. Dirt and filth make it possible for eggs to become infected with disease germs and bring about spoiling and decay. Moisture and increased temperature hastens decomposition.

Dr. Rettger's investigation did not show that fertilized eggs spoil or undergo natural bacterial decomposition more readily than the unfertilized.

It should be apparent to all, that if we want wholesome food eggs we must start with healthy young hens (any poultry keeper of experience should be able to understand that old hens may easily have some abnormality of egg organs which is not desirable when producing food eggs), provide clean and wholesome food and drink, clean quarters and clean nests, and always see that eggs are produced under cleanly conditions and kept clean until they reach the consumer's table; which should be as soon after they are laid as possible.

o

Winnings in Pullet and Cockerel-bred Classes.

The introduction of pullet-bred and cockerel-bred classes for special competition in many of our shows, we believe to be a very good thing from an educational standpoint. Where it is admitted that double mating must be practiced to secure Standard exhibition specimens for the "regular" classes of show poultry, we certainly should show specimens of such breeding stock that the beginner may profit.

As was to be expected, the introduction of such special classes has caused confusion, complaint, and has opened the way for unscrupulous breeders to misrepresent their winnings with intent to deceive the public. Winnings in the novice classes have likewise been misused. There can be no excuse for the man who wins in a minor or odd class advertising his winning as if made in the regular classes. If he wins in the novice class, his advertisement should so state. If he wins in the pullet-bred or cockerel-bred class, he should say so. If he wins in these special classes and then advertises, "First at Chicago" (or wherever he won), he does so dishonestly and with deliberate intent to cheat the reader. Ignorance or carelessness, don't and won't excuse him. He advertises "First at Chicago" because he wishes to mislead the reader and misrepresent his stock. He knows how the

Keeler's White Wyandottes

The Aristocrats of the White Wyandotte World

Have again demonstrated their superiority over all others by winning at

Indianapolis, Jan. 10th to 16th, 1914

1st, 2d, 3rd, 4th and 5th cock; 1st, 2d, 3rd, 4th and 5th hens; 1st, 2d, 3rd, 4th and 5th pullets; 1st, 3rd, 4th and 5th cockerels; 1st, 2d, 3rd and 4th old pen; 1st, 2d and 3rd young pen. The National White Wyandotte Club State Cup and Club ribbons for the best cock, hen, cockerel, pullet and pen; $50.00 cup for best display, and many other specials, thus supporting their well earned title of the

WORLD'S GREATEST STRAIN

Eggs Eggs Eggs Eggs Eggs Eggs Eggs

I have bred White Wyandotte for 20 years and for the season of 1914 have mated 16 grand pens. These pens contain practically all of the 62 birds that made these Indianapolis winnings, and the best birds reared the past three years. Sons, daughters, brothers and sisters of these grand birds. They are mated right and bred right to produce the winners at America's largest and best shows. 64 page 1914 Art Catalogue of America's finest White Wyandottes describing these matings in full free for the asking. (5 Red Stamps appreciated.) Eggs, $5.00 per 15; $9.00 per 30; $14.00 per 50; $25.00 per 100. Eggs from the best of all matings, $10.00, $15.00 and $20.00 per 15. State your wants clearly and address

KEELERSVILLE, Chas. V. Keeler, Prop., R. F. D. 11, Winamac, Indiana

reader will interpret the claim, "First at Chicago." He knows he did not win on regular Standard exhibition specimens, but he wants the reader to believe that he did. If such a breeder was honest he would state plainly that he won "First at Chicago in Pullet-bred Class" (or whatever he did win).

The show managers can remedy this matter if they will by giving only special prizes in these special classes, and reserving the regular ribbons for the regular classes only. We have had a good deal of complaint on this subject from many sources. We have been sorry to find men stooping to this low form of cheating, whom we believed to be above that sort of thing and whom, if we hadn't caught them at it, we would have given a "clean bill of honesty." When we have noted such misleading wording in advertising we have corrected it before it was put in type. Obviously we cannot check up all advertising with lists of show winnings. It is an almost impossible task to look up the winnings of each and every advertiser, but we are going to keep a "black list" for those who are caught introducing misleading wording into their advertising, with a view to showing up this sort of cheating unless it is promptly stopped.

We have said repeatedly in these columns and we again say to all poultrymen: Stick to honest methods and honest statements. Play the game with clean hands.

Play the Game Square.

Modern business isn't conducted on the same lines of brotherly love as a little girl's fifth birthday party. There is a good deal of the primitive in business. Survival of the fittest plays its part and the big fish gobble up the little fish when they can do so and get away with it. There is a good deal of "every man for himself and de'il take the hindmost," yet honesty, human kindness and friendship are not incompatible with modern business.

It is wise to keep your eyes open. It pays to look out yourself, for you are the only one who can be depended upon to look out for yourself, and there are plenty of sharks in the sea of business who will annex your roll if you are careless with it. The man who is foolish with money can always find someone to take it away from him and take it quick. Old Dave Harum was worldly wise in his business rule of "Do unto others what they would like to do to you, but do it fust!"

There are always plenty of wild-cat corporations being promoted for the purpose of selling prettily etched and colored stock certificates to the people with money to invest. It is looked upon as an easy and legal way to unload a losing business on an unwary and foolish public, but it is a steal, in many cases, nevertheless. When you see a heavily capitalized scheme being promoted, with great blocks of stock offered at attractive figures and promises of generous dividends, investigate well before you buy. Find out why the other fellow is so eager to sell, if it is such a good thing and so certain to pay big profits quickly. Remember "Get-Rick-Quick Wallingford's" business methods, and bear in mind the big railroad steals so recently exposed. Steer clear of get-rich-quick schemes and wild-cat promoters. There are legitimate corporations in abundance in the stock of which investments can be profitably made and there are others that do not hold even a gambler's chance for you. A good many are operated on the "Heads I Win, Tails You Lose" policy.

"Honesty is the best policy" in business always, though sometimes folks are dishonest and get away with it for a time. Sooner or later there is apt to be a day of reckoning.

Play the game on the square. Be honest with yourself and with others, not because it "is the best policy," but because it is right. Money is a nice thing to have. It is very useful and at times very necessary, but one of the very best things to have always with you is a clean conscience.

To all the sneers directed at the "hen business" we have paid little heed, but a friend did get "under our skin" one day last summer when, talking about a certain man in the fancy, he said: "Charlie is too honest for the chicken game, he won't succeed." No man is too honest for the fancy or practical poultry business. The honest man is the one who will stay in the business and win lasting success. We believe that the big majority of the men in fancy and practical poultry are honest. If we didn't believe it, we would quit and tackle a new job. Play the game square, and be honest because it is right.

Government Poultry Instructors.

Editor Theo. Hewes, in March *Inland*, under the caption "How Many?" says:

"How many practical men are there at the heads of the poultry departments of our agricultural colleges? How many of them have made good in the profession they have chosen before securing positions at these colleges, and how many of them could make a living out of the business if they were turned loose and told to hustle for themselves? Think it over and let us have your answer. Then try to figure out how many failures you can think of—men who have absolutely failed in every other business—who are today drawing good salaries from the National or State government, trying to teach others to do correctly the very thing they fell down on. It actually makes one smile when he goes over the list, and we know the rank and file of the poultrymen of America feel as we do about it."

Well, what would you have, Theo.?

U. R. FISHEL'S AD in this issue will interest you. Read it.

WM. COOK & SONS

ORIGINATORS OF ALL THE ORPINGTON FOWLS & DUCKS

Plants in America, England and Africa Established 1873 : Box A, Scotch Plains, New Jersey

Eventually, if you want the **best Orpingtons** of any variety, you will buy from their **Originators—Why not now?**—And avoid loss and disappointment. We **guarantee** safe delivery and **satisfaction,** backed by a reputation of 41 years standing. This means something to you, when placing your orders.

Our winnings in 1913—356 prizes including **170 Firsts** and 105 Seconds at the **largest** shows in this country. This was the result from our **best matings** and our customers produced from these matings hundreds of first prize winners.

Eggs from our first prize winners and the finest Orpingtons in the world **$20** a setting. From fine stock and our second prize winners **$10** a setting.

Send 10c for illustrated catalog containing history of the origination of the Orpingtons and hints on poultry keeping. **Mating list free.**

Several thousand Orpingtons always for sale in **Black, Buff, White, Diamond, Jubilee, Spangle and Blue, all** of which we **Originated.**

Over **14,000** first prizes won by us. Inspection **cordially** invited, trains met. A visit to our plant will show you that the finest Orpingtons in the world are mated up there. Advice free. We can start you in the poultry business right.

ORNAMENTAL LAND and WATER FOWL FOR SALE

There are some good ones. Isn't it true that in other fields, as well, a big percentage of teachers are drawn from those who have failed in other lines? The big fat salaries of teachers are mostly on paper, not actual. Mighty few of the salaries would tempt any successful practical man. Few such men would be found who could impart their knowledge to others. Some "failures" may have learned something from their own shortcomings and may be able to impart what they have learned by sore experience. We said "some" and "may," please note.

Most of our colleges put out a lot of "bunk" advertising matter to "trap" prospective students; they work petty graft to the limit and get as instructors as low-priced, cheap-salaried men as they can get. Make some of them work for the "honor" of it, and often they work them hard. Then they play at politics. The "professor," once he gets the job, has to do gallery stunts, get out frequent bulletins (whether he has anything to say or not), look out for his political fences and play up to his superiors, do lots of "institute" work to impress the public that pays the bills, and as little as possible for the students who attend the courses; and all this to keep his job, for he has

ROSE'S ORPINGTONS

BUFFS and BLACKS

First Prize Pen at Madison Square Garden. The finest Buff Orpington Pen ever shown.

"LIKE BEGETS LIKE."

My Buffs have the correct color, the color that you must have to win. If your birds lack type, color, bone, introduce my stock. Neither in England, the home of the Orpington, nor in America, can you obtain such quality and value in Buffs or Black Orpingtons as I offer you. Rose's Orpingtons, Buffs and Blacks are bred to win in the strongest competition.

The most wonderful record of the year—backed by stamina and blood lines that will **produce.**

During the 1913-14 show season, at America's two leading shows, **Madison Square Garden** and **Chicago Coliseum**—in the best classes of the breed and in competition with nearly every prominent breeder, **my Buff Orpingtons won more first prizes than all competitors combined.** Consider the following winnings and decide for yourself who has **the best Buff Orpingtons:**

MADISON SQUARE GARDEN

Dec. 26-31, 1913.

1st pen, 5 cock, 3 hen, 1-5 cockerel, 1-4 pullet.

CHICAGO COLISEUM

Dec. 12-17, 1913.

1-2-5 cock, 3 hen, 1-5 cockerel, 1-2 pullet, 3 pen.

This remarkable record, including 6 of 11 first prizes awarded, establishes beyond all doubt the superiority of Rose's Orpingtons.

A Black Orpington Record That Stands for Something—That Means Something to You

During the past three years my Black Orpingtons have won the Championship at Madison Square Garden, Boston, Baltimore, Pittsburgh, Toronto, Hagerstown, Allentown and New York State Fair. This is the most remarkable record established by any breeder of any variety. In this series of triumphs ten different judges have placed the seal of approval by awarding them highest honors.

During 1913 Rose's Black Orpingtons won 27 firsts of a possible 33 firsts at six shows of national reputation, viz.: Boston, Allentown, Hagerstown, New York State Fair, Toronto and Chicago. Five times out of six at these shows they won the Championship for Best Display.

1913-14 Black Orpington Club Show, Pittsburgh, January, 1914

They won as follows: 1-2-4-7-8 cocks; 1-3-4-8 cockerels; 1-2-4-6 hens; 1-3-4-5-8 pullets; 2 old pen; 1st young pen.

BRED IN THE RIGOROUS CANADIAN CLIMATE.

They are hardy, rapid growers and splendid winter layers, characteristics you need to make your Orpingtons suit you to a "T." I can furnish a number of high class breeding males, also pairs, trios and breeding pens that will be carefully mated to produce the best results at "live and let live" prices. Send your wants and let me furnish description and quote prices.

MY EGGS ARE THE BEST MONEY CAN BUY.

I wish every reader of this Journal could visit my farm and inspect my matings for 1914. Prominent breeders and judges who have seen them declare them unequalled. Every pen is headed by a prize winner or a near relation. If you desire eggs that will produce winners at next season's shows you cannot afford to overlook this opportunity. Better values do not exist anywhere.

Send for handsome new catalog and mating list containing illustrations of my prize winners, including full page color plate of my first prize cockerel at Madison Square Garden, in natural colors. It is free for the asking.

HUGH A. ROSE

FONTHILL, ONTARIO, CANADA

to make a living some way like everyone else.

There are quite a bunch of good men, who are doing good work at government colleges and experiment stations, who are working hard and doing their level best, and there are some others who seem chiefly concerned in getting publicity, doing gallery play stunts, and circulating wierd and improbable but scarcely useful poultry information. A lot of them haven't any real practical experience to build on. But, don't be too severe on the men. Put a large share of the blame on the college management system and on "dirty politics." The way the whole business is organized, the way new recruits are drawn and the manner in which "Prexy" and his cabinet make their selections and rule their men;—the whole blamed system from beginning to end, including the work done by the government legislative assemblies, is all wide open to criticism. Yet we do get some small good out of it all, and we believe there is a change for the better coming. Educational matters are developing greater importance these days in the minds of the many. There is a change coming in teachers and in methods of teaching all along the line. Even protective organization and prejudice can't stop it.

There are a lot of people who have asked the questions you ask, Theo., but they did not have the courage, or were too tender hearted to print it.

Mr. Collier Not a Candidate

Mr. Harry H. Collier, Tacoma, Wash., informs us that he is not a candidate for re-election as a member of the executive board of the American Poultry Association, although he was second highest on the nominating ballot. Other matters require his attention and he finds that it is almost impossible for him to be away from home a month each year.

The members of the association and the poultry fraternity in general owe much to Mr. Collier for his untiring efforts in behalf of the poultry industry, and, while he does not wish to be re-elected to office in the American Poultry Association this year, we know that he will still continue to work for the advancement of thoroughbred poultry.

New American Poultry Association Constitution.

The members of the committee who are at work on constitutional revision met at the Oliver Hotel, South Bend, Ind., March 7th and were in session two days and one night. Members present:

Mr. E. B. Thompson.
Mr. Grant M. Curtis.
Mr. John H. Robinson.
Mr. Frank E. Hering.
Mr. U. R. Fishel.
Mr. S. T. Campbell.
Mr. Reese V. Hicks.

This was the second meeting of the committee and like the first, harmony prevailed. We have every reason to believe that when this constitution is finished it will meet with the approval of the members of the association.

The third and last meeting of this committee will be held in the Statler Hotel in Buffalo April 4th. Mr. John H. Robinson will edit the constitution and have the same printed. Final action on the new constitution will be taken at the next annual meeting of the American Poultry Association, when it is hoped the largest number of members ever attending an A. P. A. meeting will be present.

This constitution will, in all probability, be in force at least five years. The constitution will be mailed to members at the earliest possible date after the meeting at Buffalo.

S. T. Campbell,
Secretary.

Important Notice.

In our February report of the national egg laying contest on page 4 under White Wyandottes, we reported pen 18 of the Pennsylvania Poultry Farm, Lancaster, Pa., as only having 405 eggs. Our mistake was made in carrying forward the totals for the previous months, and the grand total of this pen should have been 495 eggs. This would have placed the Pennsylvania Poultry Farm's pen of White Wyandottes as first for that variety, and Tom Barron as second. This would also move the White Wyandottes up to third place in the contest, and they should follow Buff Orpingtons on page 3.

T. E. QUISENBERRY,
Director.

Dr. Woods' Notes and Comment.

This is the season when we should all "swat the fly." We swat the fly because he breeds and lives in filth, walks in filth, and wipes the germs off his feet on our food. Good enough reason.

* * *

Californian poultry keepers want to swat the product of the Chinese hens.

BEST BY TEST THE GREEN SHEEN STRAIN BEST BY TEST

They say that Chinese hens breed and live in filth, eat filth, walk in filth and wipe their feet on their eggs and in the nests. Chinese eggs are pouring into Pacific Coast ports at the rate of close to a million dozen a month and cost less landed than the American hen's food-cost per dozen eggs. No wonder the Pacific Coast wants to swat the Oriental egg. They have a number of good enough reasons. Read "Germs in Eggs" in this issue.

* * *

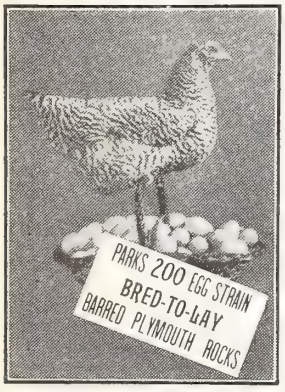
It is said that the Chinese eggs so far received are small, dark brown, inferior in quality and not well graded. Late receipts said to show better size and grading, but "mum's the word" as to quality.

* * *

Welcome gentle Spring. The prospect of mild and warm weather is a very enjoyable one. The weather performed such unkind stunts, sudden changes, prolonged severe cold and heavy snows between the New Year and late March that we have had enough of winter weather to last us for a long time. We are not prepared to tell any fairy tales about broken records and just how cold it really was. When the mercury hit 18 degrees below zero in an 80 mile windstorm, we decided not to look at the thermometer any more until it had a chance to thaw out.

* * *

Editor Standish in March *Poultry Index* says:



"We would like to ask Dr. Prince T. Woods how his birds stood the recent cold snap at his home. Here in Stoughton with the mercury at 16 degrees below zero, the writer's Anconas and Reds showed frosted combs in open-front houses, with the curtains closely drawn the greater part of the day. How about your White Rocks, brother Woods?"

* * *

Now, Brer. Standish, we wouldn't call it an open-front house "with curtains closely drawn"; that sounds a whole lot like a curtain-front house. We have houses with fronts always open; haven't a curtain in one of them. Our experience with frosted combs during the severe cold spells of the past winter was somewhat varied. A neighbor with a closed house had combs of most of his males and a number of the females badly frosted. In a 10x16 open-front house of ours, containing 30 White Rocks, not one comb on a female was touched by frostbite; of three males, two combs were frosted in the severe cold weather during Boston show week and one escaped untouched. Later on he got touched up a bit in another cold spell through sleeping out in a pine tree on a very cold night. Other birds in 20x20 houses were not troubled at all by frostbite. Rhode Island Red cockerel arriving by express had his comb frozen in shipping coop and he has recovered without treatment, but with loss of considerable comb, in the coldest open-front house we have. No other birds in that house touched. Five birds all alone in a 20x20 ft. open-front house have not been troubled at all. Three White Faverolles in a 6x10 ft. open-front house, arrived here in cold weather after Boston show and apparently not accustomed to an open-front house. They have very thin and rather large combs. Not a sign of frozen combs among the Faverolles. Our 10 year old boy has done most of the poultry work this winter and at times has slighted the work of filling up feeders and water pails, which may account for condition which resulted in frosted combs of such birds as were affected. Condition has more to do with frostbite and frozen combs than has housing. Combs will freeze in both closed and open houses and no more quickly in an open house than in a closed one. Egg yield fine all winter. Our entire family has enjoyed comfort in sleeping out of doors on an open piazza all winter, no need for a doctor and fine appetites. Haven't treated or doctored any frosted combs or wattles all winter. Such as we had were let alone and did fine. "Yours truly" had one cheek frostbitten in Boston during first part of show week. If you need any further frosty information Brer. Standish, call again. By the way, it was cold though at times; we recall that, while we were away at Boston show, our kitchen pump froze up within three feet of a red hot range. The "Mrs." is our authority for that, for she sat up to tend the fire. We don't mind talking about such things now that warm weather is in sight.

FISKE'S SINGLE COMB WHITE LEGHORNS

The World's Best Breeder of Exhibition Pen Single Comb White Leghorns, winning at the Grand Central Palace, 1913, First and Fifth Pens, and at Madison Square Garden, 1913, Second and Fifth Pens. At the Madison Square Garden, 1912-1913, I won First and Fourth Pens.

My winning at Buffalo, 1913, has never been equalled, for I won every prize in the Single Classes, First and Second Pens and all Specials.

Some of my other winnings are as follows: Grand Central Palace, 1913, First Cock, Fourth and Fifth Cockerels, Special for Best Shaped Male; Madison Square Garden, 1913, Second Cockerel Third and Fourth Cocks, Fourth Pullet, Special for Best Headed Male, Special for Best Headed Female; also winning at the same time, the $100 President's Cup for Display, same having been won three times, in 1910-1912-1913. **At Boston, 1914,** I won 1st and 2nd Pens on two entrys.

If you wish to breed and raise your own winners, you must have some of my great birds or some setting eggs to improve your stock. **Beautiful Breeding and Exhibition Cocks, Hens, Cockerels and Pullets** for sale at prices to fit the rich or poor. Besides being Show Birds, these birds are the Greatest Layers on Earth. **Eggs** from the finest of Exhibition Matings in the World, $1 apiece. **Eggs** from the Greatest Laying Females ever seen, $10 per hundred; $80 per thousand. **Baby chicks** by the hundred or thousand. Send for my catalogue at once. Single Comb White Leghorns and nothing but Single Comb White Leghorns.

HARLO J. FISKE 891 Westfield St. West Springfield, Mass.

Nothing,'' in which he condemns the methods of subscriptions soliciting at shows where three papers are offered at the price of one, for a whole year, and the agent keeps what cash he gets and all that the publishers receive is the names. He says: ''The legitimate agent of poultry papers has a right to solicit subscriptions in the show room, but the oily-tongued ones who offer the earth for two-bits, and throw in a gilt watch and chain, worth, they assure you, $1, should in our opinion be barred from every show.'' We will say a hearty ''Amen'' to that.

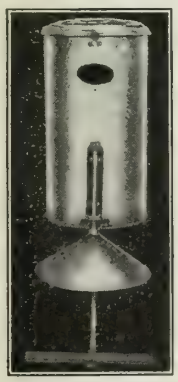
* * *

Secretary-Superintendent Charles D. Cleveland, of the New York Madison Square Garden Show, assures us that ''pass-out checks'' were available for exhibitors at the show last winter and that the door-men had instructions to supply them. He believes we must have had an unfortunate experience with an ignorant door-man. Well, we did ask for pass-out checks and were refused in a manner that made us want to punch the head of the door-man; but fortunately we remembered the ''gun-men'' of the New York police in time to prevent an ''accident.'' ''Come home, Charles, all is forgiven.'' Time now to hatch some winners for the 1914 Garden Show.

* * *

That ''pipe dream'' chatter recommending that the A. P. A. charter a lake steamer and hold the next annual convention on same enroute between Detroit and Duluth, ''listened'' like a good time all right. It is a fine boat trip and sure would be ''something doing,'' but we don't believe that such a convention would be a legal annual meeting of the association. Don't believe a legal meeting could be held on that lake boat enroute. Better forget it and convene at Chicago this summer. Chicago promises good times and good things in abundance. Chicago is a good place for the meeting. Some day maybe we can have a lake steamer junket just for the sake of the good time and without the stress of an annual meeting.

* * *



Editor Green in *Poultry Husbandry* says that the A. P. A. is a ''big, top-heavy, sluggish body'' and that for the future of the State Branch ''indications would lead one to believe that it has served its usefulness and is now gradually wasting away of dry rot.'' He also says: ''When asked, 'What are the benefits in belonging to the A. P. A.?' you can only answer, providing you tell the truth, that you benefit the handful of members who control the organization, as your $10.00, like others, will help pay for new standards and defray traveling expenses of officers and special committees.'' ''Naughty! Naughty!'' Mr. Green, you, and others, may think such things, but if you say 'em out loud the executive board may spank you for *lèse-majesté*.

* * *

Poultry Record says: ''One question that might be well considered under the caption of 'Worthy of a Thought,' that is really up to the A. P. A. to decide, is whether separate classes shall be authorized for cockerel-bred females and pullet-bred males, and to provide a standard for them. Most large shows have these classes and we are without a standard by which to judge them.''—If we are to have double matings, we ought to show pens of such matings for educational purposes, and perhaps for competition. But if such classes are shown for competition there ought to be some restraint placed upon the man who wins in a ''double mating'' class and then advertises that he won ''first pen at ——— Show,'' misleading the reader, who would naturally suppose that he had won in the regular exhibition pen class. The same line of thought applies to all exceptional classes. The man who wins first on a pullet-bred male and then advertises ''1st cock'' as his winning for his variety, does so with deliberate aim to cheat the prospective customer. There are quite a few matters that are ''worthy of thought.''

FRED W. MORSE CO. :: PROVIDENCE, R. I.

300,000 BETTER HATCHED CHICKS For 1914

It is not now a question of whether to buy chicks, but where to buy them—you want quality, vitality, quick and efficient service, with prices that are not unreasonable. We have hatched and delivered chicks for four years, beginning with a capacity of 8,000 eggs, until now we can accommodate 100,000 eggs at one time. We have not advertised extensively; our customers come back each season with increased orders. There is a reason—it's the ''BETTER HATCHED'' chicks that people demand; we use no coal or lamps for heating, our hot-water boilers are all heated with natural gas, assuring a uniform temperature; no prematurely hatched chicks, no delayed hatches, every chick hatched in pure air and out on time; they are the ones that can travel 2,000 miles, grow every mile of the way, arrive strong and healthy and continue to thrive.

The 10,000 pure bred hens that lay eggs for this plant are all on free range, healthy, strong and full of vigor. If you desire chicks from this kind of stock, with a strong guarantee behind them, in lots of 25 to 2,000, send for our free catalog, describing our plant and the following varieties of fowls:—**S. C. White Leghorns, S. C. Brown Leghorns, S. C. Buff Leghorns, Barred Rocks, White Rocks, S. C. and R. C. Reds, S. C. Black Minorcas, White Wyandottes, S. C. White Orpingtons, S. C. Buff Orpingtons.**

We quote wholesale prices in lots of 500 and over. We make a specialty of White Leghorns and Barred Rocks in thousand lots. Deliveries begin March 1st. A hatch each week.

The Co-Operative Breeding and Hatching Co., Box A, Tiro, Ohio

"Chicken-picking patent

"Feathers fall out.

"Durham, N. H., Feb. 19.—Good-by scalding water, old newspapers and a kitchen apron when chicken-picking time comes around.

"Housewives from coast to coast will rise up and call Professor R. V. Mitchell blessed when they read that he has discovered a painless-picking patent that denudes the fowl of feathers without force.

"It is a simple matter—just stick a knife into the chicken's mouth and up into a certain point in its brain. The feathers all loosen. Shake your bird and singe, draw and it is ready to broil, roast or fry, as the age of the bird may decree."

* * *

Editor H. A. Nourse, of the *Poultry Herald,* don't believe in open-front poultry houses for "use in Minnesota and nearby states—not by considerable." Well, well, some folks do and are very successful, not only in Minnesota, but farther north in British Columbia. Sorry you don't approve Harold, but we presume many will continue to succeed with open-air methods just the same. If everybody agreed that open-air living is best for man and fowl it might get too crowded out of doors anyway. Mentioning the good work and fine health of some Minnesota flocks in the Maine Station type of curtain-front house, Editor Nourse says: that the hens had been brought up and had always lived under pure air conditions, and that, "Birds unaccustomed to such conditions would not have done as well." Don't fool yourself, neighbor. We received by express in mid-January three fowls that had not been brought up to open-air conditions; they went at once into an always-open-front house, big enough to accommodate 20 birds, and they have lived there in comfort through the very severe weather all by their little threesome lonely. They got right down to the business of egg production soon after arrival, are in the pink of condition and in fine fettle. Use a little common sense in handling open-air kept poultry and you can move fowls from closed houses or the show room into open-front buildings with entire safety. Keep 'em well fed and watered and sheltered from the high winds and they will find comfort.

As an illustration of what can be done in changing to out of doors from warm, close sleeping quarters, when good judgment is used, here is a case in point. A little six-year-old girl accustomed to sleeping in a warm room contracted a severe cold about the middle of last winter. It was a persistent cold that would not respond to the usual treatment. We were having below zero weather at the time. Acting on our advice she was fitted with warm wool garments over her nightie, heavy wool socks, and a knit hood. Then she was put to bed every night under plenty of

Uhl's Day-Old Chicks Are Highest Quality

CAPACITY 35,000 CHICKS PER WEEK

WE have the largest and one of the oldest hatcheries in America. Our catalogue of 100 illustrations will tell you what some of our thousands of satisfied customers have done, and the prizes they won with our chicks. SOLD BY DEALERS EVERYWHERE

All "Pittsburgh Perfect" Brands of Steel and Wire Products are made from Basic Open Hearth material produced in our Furnaces and Mills from the Ore in our Mines to the Finished Product.

LAWN FENCE

PITTSBURGH STEEL CO., PITTSBURGH, PA.

Do you know that the past season has been one of glorious triumphs for my many customers and proves that

KENNEDY'S

IMPROVED CHAMPION STRAIN SILVER AND GOLDEN

CAMPINES

"The fowls with a character all their own" are the aristocrats of the show room in America! They have won the blue and red in the hands of my many customers at every show of note, such as New York, Boston, Baltimore, Philadelphia, Buffalo, Pittsburgh, Cleveland, Chicago, Los Angeles, Atlanta, Kansas City, St. Louis, Allentown, Hagerstown, Syracuse, as well as from coast to coast in Canada. The question no doubt arises in your mind how do I account for these sweeping triumphs of my many customers, it is easily explained in a few words, "I do not exhibit myself, so take great pleasure in fixing you up right for any show and again, I have no special matings for my private use, but in other words, they are all special matings for my customers."

Eggs For Hatching

Now, if you contemplate purchasing eggs for hatching, do not forget that I make a specialty of supplying same from the grandest birds that are properly mated for best results, and they will unquestionably produce winners. My prices for the season are at the rate of 50c each or $7.50 for 15 eggs as they run from all my grand matings, SELECTED EGGS, or in other words, if you already have a flock of Campines and you want eggs selected from my best females or matings that are strong in the points in which your flock is weak, they are $1.00 each or $15.00 for 15 eggs. Order early, as the demand will far exceed my supply, in fact, on Feb. 1st of this season I had nearly 50% more orders booked for shipment after March 1st than I had last season the same time.

Campines Have Made Good
Are Making Good
And Will Do Still Better

CAMPINEOLOGY

Third Edition.

"The story of the living egg machines." The most costly and complete work ever attempted on Campines will be off the press March 15th. It will be an encyclopaedia on this wonderful fowl, going into matters of interest in detail, as well as a work of artists' and printers' art. If you are at all interested in Campines it will be worth dollars to you—ten cents to pay postage on this DE LUXE publication will be appreciated.

J. FRED N. KENNEDY
Box F **Birch Cliff, Ontario, Canada**

good wool blankets on an open-air sleeping porch. She improved the first night out of doors and in a few days was entirely rid of her cold and has not had another cold since. That case is making a lot of converts for open-air sleeping porches. Open-air and cold sleeping quarters are really very comfortable, more so than indoors, if you only make sensible provision for comfort. Comfort is the whole secret.

* * *

When one wishes to move fowls from warm quarters to an open-front house in cold weather, move them in the warm part of the day. See that they get well filled up with whole corn, wheat and oats. Don't let them go to roost with half-filled or empty crops. See that the roosts are well back from the open front and that there is head room enough above the roosts for the tallest male to stretch and crow without bumping his head, and some room to spare. When you can, fill the house with fowls to its roosting capacity. If afraid of frosted combs and wattles, rub vaseline into them as a preventive. Provide a supply of dry litter well back from the front. Keep them well fed and watered. When there is snow, in very cold weather, we prefer snow to the use of drinkwater as they do not get so wet with it and are less liable to frosting. Eating snow won't hurt the egg yield a bit, they will lay just as many eggs with snow before them as if they had drinking water, only be sure that it is clean and renewed often. If this matter seems a bit out of season to you, blame it on Mr. Nourse for cussing the open-air house. Bet a lot of our readers are in snow country yet.

* * *

The Spokane (Wash.) *Daily Chronicle* is authority for the statement that the Schallinger Produce Company voluntarily delivered 60,480 eggs (from a recent importation from China), at the city crematory to be cremated. A part of this consignment were reported to be sea gull eggs. A bacterial count made by City Bacteriologist M. M. Patton, showed ninety million bacteria in one of these condemned Chinese eggs. The price of Chinese eggs took a decided drop in the local market.

* * *

A. A. Kennard & Co., egg merchants of New York City, have been circulating a cartoon showing "five reasons why you should not pay high prices for eggs this season." This cartoon shows the foreign nations just outside the "Open Door" of the United States. China is represented offering eggs at 7 cents a dozen; Austria with eggs at 12 cents; Germany offers eggs at 11 cents a dozen; Denmark with eggs at 15 cents a dozen and Russia with her offering at 9 cents a dozen. Describing these foreign nation egg producers who are flocking to the open door, is the following comment: "These are not 'Suckers.' The Suckers are inside the door busy keeping prices up on themselves."

* * *

Of course the "Suckers" referred to in the above mentioned cartoon are supposed to be the collectors and wholesale shippers of eggs, whom the "trade" continually damns for paying producers too high a price for eggs. But it should be apparent that egg merchants generally look upon poultry keepers and egg farmers as a race of "Suckers" who will always continue to sell eggs below cost of production and slave year

after year to faten the purses of the market hogs at the expense of themselves and their families. Don't be a "Sucker." It is high time for American poultrymen to work for themselves and to safeguard their own interests.

* * *

A speaker at the recent big Spring meeting of wholesale egg dealers at Kansas City says that the U. S. Department of Agriculture, the San Francisco Board of Health and the University of California, have all made complete tests of Chinese eggs and found them "good and merchantable." Singular, isn't it? Our National and State Government experts have examined American eggs and found a considerable percentage of them containing injurious microbes, but the stale Oriental egg gets a "clean bill of health" if we are to believe trade reports. This, notwithstanding the fact that the daily press reports Coast cities condemning and cremating unfit foreign eggs and in some tests finding them swarming with millions of bacteria. Who are you going to believe? Is our present government for or against the American hen? If cheap foreign eggs did not promise big opportunities for money making and if the importers had to always eat Chinese eggs or go without, wonder how the tune would play then?

* * *

Market advices predict that foreign eggs will be a big factor in making egg prices this spring. It is expected that domestic new-laid eggs will go into storage at 18 cents the dozen or less. Some shippers claim that Philadelphia and Chicago prices should not be above 16 cents a dozen. What do you think about that, Mr. American Poultrykeeper? Taking this country as a whole and figuring all costs of production, we don't believe you can produce eggs on the farm at a total cost of less than 16 cents a dozen. If shippers expect to lay them down in the big cities at 16 cents, they certainly don't plan to pay the producer more than 10 cents a dozen. Time for somebody to wake up.

* * *

According to reports furnished by Uncle Sam's experts, a good many of the cheap eggs now being shipped us by European countries are reshipments of Asiatic eggs collected for and shipped to big dealers in European trade centers. These Oriental eggs are bound to be "some globe trotters" before they get to this country to delight (?) the inner man. The eagles certainly seem to have hooked their talons into the vitals of the American hen. Wonder what the outcome will be.

* * *

In the editorial columns will be found considerable comment, pro and con, concerning eggs imported from the Far East. Read and form your own conclusions. China eggs have long been made use of by our poultry keepers as nest eggs; they don't spoil unless smashed and heat don't hurt them any. Even incubation for many weeks has failed to hatch a tea set. Wonder if that was the kind of China eggs John Stewart was thinking about when he mentioned that Chinese eggs stand heat with less effect than our eggs. Probably not, since he was pleased with the quality of some he had that were over three months old.

* * *

Government reports indicate an annual loss in eggs amounting to nearly fifty million dollars' worth of the domestic product, because of bad conditions of production, and equally bad conditions of marketing. We need to wake up a bit. It is stated that the consumption of eggs would be greater if our public had greater confidence in the quality. Thought Uncle Sam was striving to improve the quality of farm eggs. If we lack confidence in our own American product, how is it that we are expected to acquire so much confidence in the quality and desirability of eggs from China?

* * *

State and City Health Board officials all over this broad land are raising bear with egg dealers and prosecuting them and condemning lots of storage eggs as not being "healthy, fresh, sound, wholesome or safe for human food." The press and public has urged

STANDARD LINE BRED S. C. W. LEGHORNS EXCLUSIVELY

Chicago Show, 1914 Easling Wins

In the largest class at the show, ALL SPECIALS, SILVER CUP for best display and TEN regular FIRST, SECOND, THIRD and FOURTH PRIZES on my entry of fifteen birds.

My New Policy Is a Winner

UNDER my new policy the cream of the place will be confined to only six pens. Over half of the birds in these pens are actual winners at Chicago and Louisville.

A uniform price will be charged for eggs and chicks from Exhibition matings, which is less than a third of the price formerly asked.

Before you buy get my 1914 policy of doing business. It tells you how I can afford to do this and why you cannot afford to purchase elsewhere. It will greatly interest anyone who breeds White Leghorns, and you will miss something if you don't send me your name and address. **Do So Now.**

Have You Ever Heard of Parkside Poultry Farm?

Parkside Farm is not a rich man's hobby. It is a place where prize winners are bred, hatched, raised and sold to people who cannot raise such birds.

I have won more prizes at **Chicago** in the last seven years than all my competitors combined, and my policy of breeding and raising the birds I show meets with the universal approval of all the intelligent breeders who come to me for stock of a quality that will reproduce themselves in natural pure white color, and the very best of type, shape and head points. I have furnished winners for every show of any note, and my stock is better this year than ever before. I have plenty of stock for sale and incubator eggs in 100 to 1,000 lots.

My Catalogue is Free.
